School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	62,050 S.F.	Last Renovation:

Facility Description:

Bladensburg Elementary School is a one-story, 62,050 square foot facility located on a 12.8-acre site close to MD Route 295 (Baltimore-Washington Parkway) in Bladensburg, MD. The original building was constructed in 1990, with no additions constructed or major renovations performed since that time. In 2012 the chillers were replaced and also some minor projects were performed including grease trap interceptor replacement and security system updates.

ACCESSIBILITY ISSUES

The main entrance has curb cuts, a ramp, and wide enough doors for wheel chair access. Handicap toilet stalls configurations and accessories are available in the gang restroom and in the few restrooms attached to classrooms. All the programs in this one-story facility are handicap accessible. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, crawl space, or sub-floor.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer and stucco over concrete masonry unit (CMU), double pane metal windows with operable frames, and hollow metal steel doors. The exterior has brick veneer and stucco. The double pane windows are energy efficient. Four classrooms have an exterior door. The original building has low-slope built up roof with gravel ballast.

C. INTERIORS

The interior partition walls typically include painted CMU and folding metal partition walls (in two classrooms and in multi-purpose room). Interior doors, including fire doors, are generally solid core wood doors with hollow metal frames. The fire doors close automatically.

Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have both original chalkboards and new electronic white boards. Toilet accessories such as metal toilet partitions and mirrors are original. The facility has a metal ladder to access the roof hatch.

Interior wall finishes are typically painted CMU and folding metal partition walls. Floor finishes throughout the building are typically vinyl composition tiles (VCT), carpet, and ceramic tiles. The overall ceiling finishes are typically suspended acoustical needlepoint tiles.

D. SERVICES

Plumbing

Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains.

HVAC

Heating is provided by two gas-fired boilers. Cooling is supplied by two water cooled chillers replaced in 2012. The heating/cooling distribution system is ductwork in the offices, science and music rooms and 2-pipe system using unit ventilators. Fresh air is supplied by air handling units. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed throughout, and surface-mounted at the gym. Lights are fluorescent. Emergency power and lighting are present and exit signs are present at exit doors and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe alarms in common spaces and interior corridors. The system is activated by pull stations and smoke detectors and is centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system without cameras that is actuated by contact devices and is centrally monitored. Some updates to the system was performed in 2012.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, and medical equipment. The library has shelves for elementary school students and furniture such as tables/chairs. The nurse's room has two beds. There are sinks in the nurse's room and in the attached restroom. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment, food service equipment, grease trap interceptor replaced in 2012 and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where there are two reserved handicap spaces out of total 67 parking spaces. The bus drop-off zone is at the front entrance and is covered. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, lighting and utility lines. Also, pedestrian and vehicular traffic appeared to be well separated.

Current Repair Cost: \$5,931,685.28**Replacement Cost:** \$16,706,671.70**FCI:** 35.50%

Facility Description:

Bond Mill Elementary School is a one-story, 58,325 square foot facility located on a 9.8-acre site near I-95 (Capital Beltway) in Laurel, Maryland. The original building was constructed in 1968, with no major additions constructed or major renovations performed since that time. In 2013 there will be a POD conversion of 10,000 S.F. into classrooms that will include replacement of chillers, unit ventilators and controls.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, door hardware, interior signage, and drinking fountains.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building has a crawl space of CMU construction.

B. SHELL

The superstructure is concrete reinforced masonry with face brick, load bearing CMU, and glaze block walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill on built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. Interior doors are solid core wood with hollow metal frames. The doors and frames do not have fire labels. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and glaze block wainscot. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails and toilet partitions. The interior wall finishes are typically CMU and glaze block wainscot. Floor finishes in common areas are typically VAT, VCT, carpet and ceramic tile. Floor finishes in assignable spaces are typically VAT, VCT, ceramic tile, and carpet. Ceiling finishes in common areas are typically suspended acoustical tile. Ceiling finishes in assignable areas are typically suspended acoustical tile.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

The water closets and urinals are low-flow flush valves. The lavatories are original. Domestic water distribution is primarily copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided a gas fired hot water heater with a remote storage tank.

HVAC

Heating is provided by two oil-fired hot water boilers. Cooling is supplied by two indoor water cooled chillers scheduled to be replaced in 2013. Heat discharge is by a ground mounted cooling tower. The heating/cooling distribution system is a 2-pipe system to unit ventilators, are scheduled for replacement in 2013. Ceiling mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are scheduled for replacement in 2013.

Fire Protection

The building has a very limited fire sprinkler system which does not include classrooms and corridors. Fire extinguishers are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted utility transformer that delivers power to a main switchboard. Power distribution wiring is typically copper. Lighting is typically fluorescent lay-in in the corridors and pendant wrap-around units in the classrooms. The school underwent a ballast and lamp change-out including T-8 lamps. The exterior parking and roadway lighting consists of dual bracket mounted luminaries on steel and aluminum poles and square concrete bases. There is also a street light at the entry driveway. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible signal devices in common spaces, interior corridors, etc. The fire alarm control panel is a non-addressable system. The system is activated by pull stations and smoke detectors. The telephone and data systems are separate and do not include dedicated closets or cabinets. The space housing the servers is not separately air conditioned. The building includes an internal security system that is actuated by contact, optical or combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. FURNISHINGS & EQUIPMENT

The building includes fixed library, theater and stage, audio-visual, and medical equipment. The building also includes fixed casework, window treatment, food service equipment, grease trap and floor grilles and mats.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where it was improved in 2012 with 93 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, lighting, utility lines, an underground fuel oil tank installed in 2006 and an above ground propane tank which serves the portable classrooms and water heater only.

Current Repair Cost: \$6,280,033.93**Replacement Cost:** \$16,456,794.42**FCI:** 38.16%

General Information:

Function:	Elementary School
Gross Area:	79,457 S.F.

Year Built:
Last Renovation:

Facility Description:

Bradbury Heights Elementary School is a two-story, 79,457 square foot facility located on a 5-acre site close to Southern Avenue SE and MD Route 4 in Capital Heights, MD. The original building was constructed in 1991, with no additions constructed or major renovations performed since that time. In 2012 the chillers were replaced along with some minor projects including grease trap interceptor replacement, flooring, painting and network infrastructure updates.

ACCESSIBILITY ISSUES

The facility is generally in compliance with ADA requirements. The building has ramps, an elevator, accessible restrooms, and meets most ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade on the first floor and metal pan with lightweight fill on upper floors. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall type is typically painted CMU. Interior doors are generally solid core/hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes concrete risers and treads with tile finishes. The interior wall finishes are typically tiles. Floor finishes in common areas are typically terrazzo, ceramic tile, vinyl composition tile and carpet. Floor finishes in assignable spaces is typically carpet and ceramic tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster.

D. SERVICES

Conveying

The building has a hydraulic elevator.

Plumbing

Fixtures are original, except for the low flow toilets. Domestic water distribution is original and consists of copper and galvanized piping. Hot water is provided by gas fired water heaters. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building has a wet pipe sprinkler system that provides complete coverage in all areas.

HVAC

Heating is provided by two dual fired boilers that supply fin tube radiators and terminal units throughout the building. Cooling is provided by combination of an air cooled chiller replaced in 2012 and two roof mounted package units. Distribution is through piping to air handlers and duct work to the individual spaces. Fresh air is supplied mostly by roof mounted air handlers and infiltration. Controls are low voltage electrical thermostats and pneumatics. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides power to main disconnect. Lighting is primarily recessed fluorescent fixtures with electronic ballasts and T-8 lamps. Exit signs are illuminated. The building has a propane fired emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible and visual alarms, manual pull stations, and heat/smoke detectors. Kitchen range hood has a fire suppression system. Telephone and data systems are separate, not located in dedicated closets and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library and theater and stage (in multi-purpose room) equipment. The building also includes fixed casework, food service equipment, two grease trap interceptors replaced in 2012 and window treatment.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Parking is available on site where three out of 75 are handicap spaces and paths to building entrances comply with ADA requirements. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, lighting and utility lines.

General Information:

Function:	Elementary School	Year Built:
Gross Area:	58,155 S.F.	Last Renovation:

Facility Description:

Brandywine Elementary School is a one-story, 58,155 square foot facility located on a 12.3-acre site close to MD Route 5 in Brandywine, MD. The original building was constructed in 1951 and additions were constructed in 1970 and 1979, with major renovation done in 1979.

ACCESSIBILITY ISSUES

The main entrance has a ramp and doors wide enough for wheel chair access. All programs in the building are handicap accessible via concrete ramps. Metal hand rails are available in the gang restrooms. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a concrete footings and foundation walls. The facility has a basement of concrete masonry unit (CMU) construction. The basement is used for boilers, other mechanical equipment, and electrical panel-board.

B. SHELL

The superstructure is load bearing masonry walls and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow core metal steel doors. The metal windows are original. There are fire exit windows in most of the classrooms, with doors to courtyard and exterior in the remaining classrooms. Roof construction is low-slope, built-up roof with stone ballast.

C. INTERIORS

The interior partition walls typically include painted CMU with glazed block wainscot in the corridors and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalk boards. Toilet accessories such as metal toilet partitions are original. The facility has circular staircase with steel treads and risers and steel frame. The stairs are original.

Interior wall finishes are typically painted CMU and drywall. Floor finishes are typically terrazzo, vinyl asbestos tiles (VAT), carpet, vinyl composition tiles, and ceramic tiles in restrooms. The ceramic tiles in the restrooms are original. The overall ceiling finishes are typically suspended acoustical tiles.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures appear to be original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal and external with roof drains and scuppers.

HVAC

Heating is provided by two gas-fired boilers. The original building has two roof-top package units (heating and cooling) for the classrooms and two ceiling mounted air-handling units for the cafeteria. There are three condensing units on the roof top (two for the cafeteria and one for the gymnasium office). The two air-handling units are connected to a condensing unit on the ground. The gymnasium is the only portion of the building without central cooling. Cooling is supplied by water cooled chillers. The heating/cooling distribution system is using air handlers and fan coil units. Fresh air is supplied by air handling units. Ceiling mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that powers a main panel. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically serving recessed fluorescent. Emergency power and lighting is present and exit signs are present at exit doors and near stairways and corridors.

Communications and Security

The fire alarm system consists of audible alarms in interior corridors. The system is activated by pull stations and is not centrally monitored. The telephone and data systems are separate and include dedicated closets or cabinets that are adequately secured. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes library (media center), theater and stage (multi-purpose room), and medical equipment. The library has shelving. The nurse's room has equipment. The building also includes fixed casework/cabinetry in the classrooms, window treatment, food service equipment, grease trap and multiple seating furnishings (folding chairs and tables). The metal window blinds are original. The classroom sinks and cabinets are original.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where two parking lots with two handicap spaces out of total 52 parking spaces. There is sufficient parking capacity for occupants and for special functions. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, lighting and utility lines.

Year Built:
Last Renovation:

Facility Description:

Calverton Elementary School is a two-story, 58,322 square foot facility located on a 5.9-acre site close to I-495 (Capital Beltway) in Beltsville, MD. The original building was constructed in 1964 and additions were constructed in 1968 and 2000, with no major renovation. In 2010 the roof covering was replaced. In 2012 exterior wall panels and kitchen grease trap were replaced.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The main entrance has a ramp and a covered bus loading area, but lacks adequate hardware to facilitate handicap accessibility. The two-story facility does not have an elevator or chair lift to the second floor, restrooms and interior door hardware need improvements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. First floor construction is slab on grade and second floor is constructed with metal pan with lightweight fill. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU and architectural precast concrete panels replaced in 2012. Exterior windows are aluminum sash with operable single-pane glazing. The 2000 addition windows are double pane. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof replaced in 2010.

C. INTERIORS

Interior partition wall types typically include painted CMU and drywall. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails and toilet partitions. Stair construction includes concrete risers and treads with tile finishes. The interior wall finishes are typically drywall and glazed blocks. Floor finishes in common areas are typically ceramic tile, vinyl composition tile, carpet, and VAT. Floor finishes in assignable spaces are typically vinyl tile, carpet, and VAT. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 42,908 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster and suspended acoustical panels.

D. Services

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original except for the low flow toilets. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater in the original building and an electric water heater in the four classroom addition. Sanitary waste system is cast iron. Rain water drain system is external with roof drains and downspouts. The building does not have a sprinkler system.

HVAC

Heating is provided by two original steam dual fired boilers that supply fin tube radiators and terminal units throughout the building. Cooling is provided by individual window units for each space. Roof mounted gas fired package units provide heating and cooling for the four classroom addition. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units.

Electrical

Facility Executive Summary

A pole mounted transformer provides power to a main disconnect. Minor circuit additions have been installed to address the window air conditioner power, but most of the system is original. Lighting has been upgraded to electronic ballasts and T-8 lamps. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

The system consists of audible alarms, manual pull stations and heat/smoke detectors. The system in the four classroom addition has visual/audible alarms. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building has fixed casework, cabinets, food service equipment, a kitchen grease trap replaced in 2012 and window blinds.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Parking is available on-site where two out of 50 are handicap spaces with paths to building entrances. The site includes concrete sidewalks, lighting and utility lines. Drainage is generally handled by surface discharge. Underground fuel tank was replaced in 2008.

School Board District	6
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	44,764 S.F.

Year Built:

Last Renovation:

Facility Description:

Capitol Heights Elementary School is a one-story, 44,764 square foot facility located on a 10-acre site close to Southern Avenue SE and MD Route 214 (Central Avenue) in Capitol Heights, MD. The original building was constructed in 1959 and additions were constructed in 1964, 1969, and 1975, with no major renovation.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The ramp to the main entrance lacks change of color and texture, graphics and signage are missing, and restrooms do not have handrails. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows include aluminum and steel sashes with operable single-pane glazing.

C. INTERIORS

Interior partition wall types typically include glazed blocks, painted CMU, and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior doors and their hardware and frames are original. Interior fittings include chalk and tack boards, toilet accessories, shelving, and toilet partitions. The interior wall finishes are typically drywall, tile, glazed block, and paint. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, and vinyl asbestos tile. Floor finishes in assignable spaces are typically vinyl tile, vinyl asbestos tile, carpet, and concrete. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 46,615 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical tile and suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster, suspended acoustical tiles panels.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Hot water is provided by a gas fired water heater in the main mechanical room and an electric water heater in the gym mechanical room. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers that supply fin tube radiators and fan coil units throughout the building. A third oil fired boiler provides heating for the gym. The gym is not cooled. Cooling is provided by an air cooled chiller on the roof. A separate roof package unit cools the library. Fresh air is supplied by ducted air to most of the ceiling mounted fan coil units. Controls are low voltage electrical thermostats, individual controls on window units and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pole mounted transformer provides power to a main disconnect. Circuit additions have been installed to address the air cooled chiller, but most of the system is original. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building has an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible/visual alarms, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), and medical equipment. The building also includes fixed casework furnishings, food service equipment, a kitchen grease trap and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Parking is available on-site where two out of 48 are handicap spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, lighting and utility lines. A double-wall fuel tank with leak detection and level indication was installed in 2004 and a second above ground tank serves the boiler for the gym installed in 1997.

Facility Description:

Carmody Elementary School is a one-story, 52,366 square foot facility located on a 9.2-acre site close to Interstate 495 (Capital Beltway) in Capital Heights, MD. The original building was constructed in 1958 and multiple additions were constructed in 1961, 1963, 1970, 1997, and 2002, with major renovation done in 2002.

ACCESSIBILITY ISSUES

The facility is generally in compliance with ADA requirements. The renovation completed in 2002 included new signage, door hardware, restrooms, parking areas, drinking fountains, and entrances that were designed with handicap students and staff in mind. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor construction.

B. SHELL

The superstructure is steel frame and load bearing masonry walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU with sections of pre-fabricated metal panels. Exterior windows are aluminum sash with fixed and operable single-pane and double pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat with built-up roof. All exterior finishes appear to have been upgraded as part of the 2002 renovation.

C. INTERIORS

Interior construction partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails and toilet partitions. Interior wall finishes are typically painted CMU. Floor finishes in common areas are typically ceramic tile and vinyl composition tile. Floor finishes in assignable spaces are typically vinyl tile. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels. All interior finishes appear to have been upgraded as part of the 2002 renovation.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater with storage tank and circulation pump which were installed in 2001.

HVAC

Heating is provided by two gas/oil fired hydronic boilers and eight rooftop gas-fired rooftop package units. Cooling is supplied by a rotary compressor air-cooled unit installed in 2002. The heating/cooling distribution system is a 2-pipe, system using air handlers, fan coil units, fin tube radiators, and unit ventilators. Fresh air is supplied by air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and digital and are centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that powers the main panel installed in 2001. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is serving recessed and surface-mounted fluorescent and some incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe alarms in common spaces, interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are combined and include dedicated closets/rooms or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual and medical. The building also includes fixed window treatment furnishings, food service equipment and a kitchen grease trap.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where two out of 55 are handicap spaces with paths to the building entrances. The site includes concrete sidewalks, lighting, utility lines and a 3,000 gallon fuel oil tank of dual wall construction with level and leak detection systems installed in 1994. Drainage is generally handled by surface drainage.

School Addition 4	Built in 1995, 22,610 S.F.
School Board District	3
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	54,125 S.F.

Year Built:**Last Renovation:****Facility Description:**

Carole Highlands Elementary School is a single-story, 54,125 square foot facility located on a 10-acre site close to MD Route 193 and MD Route 650 in Takoma Park, MD. The original building was constructed in 1953 and additions were constructed in 1955, 1969, 1989 (Four Modulares), and 1995, with a major renovation done in 1995. In 2012 there were folding partitions installed into the 1995 addition building.

ACCESSIBILITY ISSUE

The school has three parking areas assigned as handicapped parking. Access to the school lobby is limited by the glass storefront system, which is partially compliant with ADA standards for assisted entrances. The office reception counter is a single level counter that will require enhancement to allow for dual level access for handicap persons. Interior systems, such as signage, door hardware, restroom fixtures and railing, as well as drinking fountains and assisted listening device applications are not consistent throughout the school. There is a mixture of door hardware from knob to lever actuated. Signage consists of compliant signage and older signage that appears original to the building's construction. Restrooms appear to have proper railing and fixtures; however, the dispensers and mirrors will require enhancement to gain compliance with the current standard. Drinking fountains are a mixture of single level and dual level units. Specialized attention for independent student needs for listening devices and visual aids should be addressed on case-by-case depending on the specific disability. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame, load bearing stud walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of CMU and brick veneer. Exterior windows are aluminum and steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU, drywall and folding partitions. Folding partitions were installed in 2012 in the 1995 Addition building. Interior doors are generally solid core wood doors and a few hollow metal applications with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails and toilet partitions. The interior wall finishes are typically painted CMU. Floor finishes in common areas are typically vinyl composition tile and carpet. Floor finishes in assignable spaces are typically vinyl tile. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. BUILDING SERVICES**Conveying Systems**

The building does not have conveying equipment.

Mechanical/Plumbing

The school has two hot water boilers that were installed in 1995 and in good condition. Each of the boilers uses natural gas as primary fuel. There is one air cooled chiller that was installed in 1995. The system is a 2-pipe distribution system with individual controls in each classroom. Heating is provided to the original building and Additions 1 and 2 by hot water through unit ventilators. Most of these were upgraded in 1995. Addition 3 has thru-wall package units with electric heat installed in 1988. The 1995 Addition features rooftop units with water coils, 2-pipe, from the central boilers and chiller. Domestic hot water is provided through a heat exchanger from the boilers. Plumbing fixtures throughout the school were installed in 1995, except in Addition 3, 1988. Roof top exhaust fans were installed in 1995, except Addition 3, 1988.

Facility Executive Summary

Electrical

The incoming electrical service is supplied by a utility pad mounted transformer that supplies service to switchboard, which was installed in the original building in 1995. Power is then distributed to the additions. The kitchen, located in Addition 4 is fed from the main switchboard. An emergency generator was installed outside the original building in 1995. Lighting is primarily fluorescent, recessed in corridors, pendent in classrooms. The fixtures were modified to T8 lamps and electronic ballasts in 2007.

Fire Protection/Life Safety Systems

The main fire alarm control panel is notifier, non-addressable. There are audible and strobe signal devices in the corridors, which were part of the 1995 renovation. Smoke detectors are located in the corridors. There is a centrally monitored security system, intercom, and phone/data system.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, food service equipment and medical equipment. The building also includes window treatments in several sections and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where four out of 60 are handicap spaces and path to building entrances. Drainage is generally adequate and is handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic and a 10,000 gallon fuel tank replaced in 1995. The water supply is provided from the campus distribution system.

Current Repair Cost: \$3,405,536.96**Replacement Cost:** \$14,733,438.33**FCI:** 23.11%

School Board District	2
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	45,842 S.F.

Year Built:

Last Renovation:

Facility Description:

Carrollton Elementary School is a one-story, 45,842 square foot facility located on a 9.8-acre site close to I-95 in New Carrollton, MD. The original building was constructed in 1960 and additions were constructed in 1962, 1966, and 2000, with no major renovation. In 2009 some minor projects were performed that included interior and exterior painting, caulking and glass replacement where needed and in 2012 a kitchen grease trap was installed.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and doors that are wide enough for wheel chair access, but it lacks push button wall switches and automatic door openers. Though all the programs in the facility are handicap accessible, it is necessary to exit the building and re-enter through another door on the other side of the building, in order to access the classrooms from the multi-purpose room. Handicap access ramp or chair lift on stairs (for difference in level) is needed in the building. Handicap toilet stalls are available in only three gang restrooms: one by the multi-purpose room and two in the blue hall (2000 addition). Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade with concrete footings and foundation walls. The building does not have a basement. The building has crawl space.

B. SHELL

The superstructure is load bearing masonry walls and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, metal windows with operable frames, solid core exterior wood doors, and hollow metal steel doors. The single pane metal windows in the original building, 1962 addition, and 1966 addition are original. All classrooms in 2000 addition have a fire window exits. The classrooms in the original building, 1962 addition, and 1966 addition have exterior door openings. The solid core wood exterior doors in the original building, 1962 addition, and 1966 addition are original. The facility has low-slope, built up roof with gravel ballast. The built-up roof on the original building, 1962 addition, and 1966 addition was replaced in 2006. The roof on the 2000 addition is original.

C. INTERIORS

Interior partition walls typically include painted CMU with glazed block wainscot in the corridors. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards. The metal toilet partitions are original. The facility has a metal ladder to access the roof hatch.

Interior wall finishes are typically painted CMU. The floor finishes throughout the building are typically vinyl composition tiles (VCT), vinyl asbestos tiles (VAT), carpet, and ceramic tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 8,700 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically acoustical tiles. The ceilings in the classrooms are original. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 1,500 square feet of asbestos containing needlepoint ceiling tiles.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Low-flow toilet fixtures were installed in 2007. Urinal and sinks are original. Domestic water distribution is appears to be copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains were updated in 2006.

HVAC

Facility Executive Summary

Heating is provided by two oil/gas-fired boilers in original building and rooftop package units in the 2000 addition. Cooling is supplied by temporary window units in the original building and by rooftop package units in the 2000 addition. The heating/cooling distribution system is a 2-pipe system using fan coil units and fin tube radiators. Fresh air is supplied by infiltration. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

A majority of the buildings do not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted, pole mounted transformers that deliver power to a main panel. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and suspended fluorescents. Emergency power is not present and exit signs are present at exit doors and are typically illuminated. Emergency lighting is supplied by a battery system.

Communications and Security

The fire alarm system consists of audible/strobe alarms in new wing, but there are no strobes in the original building with annunciators in interior corridors. The system is activated by pull stations and smoke detector installed in 2006 and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact with no surveillance equipment, but is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, and medical equipment. The library has shelves and furniture from 2007. The nurse's room has two beds. The sink in the nurse's room and restroom fixtures are original. The school has a stage. The building also includes fixed casework/cabinetry in the classrooms, window treatment, food service equipment, kitchen grease trap and multiple seating furnishings (folding chairs and tables) in the multi-purpose room. The metal window blinds are original. All classrooms, except in 2000 addition, have sinks and cabinets that are original.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available with two reserved handicap spaces out of total of 45 parking spaces. The parking surface and curbs were striped in 2006. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting for vehicular, pedestrian night traffic utility lines and an underground fuel tank installed in 1993.

General Information:

Function:	Elementary School	Year Built:
Gross Area:	56,889 S.F.	Last Renovation:

Facility Description:

Catherine T Reed Elementary School is a one-story, 56,889 square foot facility located on a 10.4-acre site close to I-295 and Capital Beltway (I-95/I-495) in Lanham, MD. The original building was constructed in 1966 and additions were constructed in 1968 and 1994 addition, with no major renovation. In 2009 the underground fuel tank was replaced, and in 2013 there will be a POD conversion of 16,585 S.F. into 8 classrooms, including replacement of 36 unit ventilators, DDC controls and some piping insulation.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. Car and pedestrian traffic are not separated very well, access ramps to the entrances need to be upgraded, and interior door hardware needs to be upgraded as well. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof. Roof was replaced in 2002.

C. INTERIORS

Interior partition wall types typically include painted CMU and moveable partition. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, shelving and toilet partitions. The interior wall finishes are typically painted CMU, tile, and moveable wall. Floor finishes in common areas are typically ceramic tiles, vinyl asbestos tiles, carpet, and vinyl tiles. Floor finishes in assignable spaces is typically concrete, carpet and vinyl tile. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan, the school contains 46,750 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster and suspended acoustical panels.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system except in mechanical rooms and janitor closets.

HVAC

Heating is provided by two boilers replaced in 2007 that supply air handlers and fan coil units throughout the building. Cooling is provided by air cooled chillers that supply to fan coils and air handlers where 36 unit ventilators are scheduled to be replaced in 2013. Distribution is a two pipe system where piping insulation will be replaced in 2013. Heating and cooling for the modular addition is by roof mounted, gas fired roof top package units. Fresh air is supplied mostly by air handlers, fan coils, and roof mounted package units. DDC controls will be replaced in 2013. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to a main disconnect. Main panel was upgraded for the air conditioning but most of the distribution system is original. Lighting is primarily fluorescent fixtures. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated.

Communication and Security

Facility Executive Summary

The system consists of visual/audible annunciators, manual pull stations, and heat/smoke detectors. The system was replaced in 2004. Telephone and data systems are separate, not located in dedicated closets and do not have independent cooling systems. The security system consists of motion sensors.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), and medical equipment. The building also includes food service equipment, a kitchen grease trap, fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Parking is available on-site where two out of 85 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, concrete stairs to the playing fields behind the school, site lighting, utility lines including water, sewer, electrical and a 8,000 gallon underground fuel tank replaced in 2009. A propane tank is located adjacent to the chiller, but is not connected to the building.

School Addition 2	Built in 1999, 7,105 S.F.
School Board District	3
School Grade	K-6th

General Information:

Function: Elementary School

Gross Area: 30,066 S.F.

Year Built:

Last Renovation:

Facility Description:

Cesar Chavez Elementary School is a single-story, 30,066 square foot facility located on a 6.3-acre site close to MD Route 650 in Hyattsville, MD. The original building was constructed in 1954 and additions were constructed in 1969 (formerly Parkway ES) and 1999 (re-opening), with no major renovation performed.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. It does not contain handicap accessible restrooms and the fire alarm system is audible with limited strobes. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is steel frame and load bearing stud walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer. Exterior windows are aluminum and steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core/hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving and toilet partitions. The interior wall finishes are typically painted CMU and generally. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces are typically vinyl tile and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 14,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES

Conveying Systems

The building does not have an elevator; it is one-story.

Mechanical/Plumbing

The original building has two boilers, which were installed in 1999. Each of the boilers uses natural gas as primary fuel with oil as alternate fuel. The system is a 2-pipe distribution system with individual controls in each classroom. Heating is provided by hot water through unit ventilators. Air conditioning is provided in the original building by one air cooled chiller, which was installed in 1990. Addition 1, the media center and classrooms, have a rooftop unit, estimated 1995. Addition 2 has seven rooftop units, original to construction, 1999. The server/data room, containing two servers, has no ventilation and is too warm. Plumbing fixtures in the entire school are flush valve water closets. Eleven new flush valve water closets have been installed in the original building in 2007.

Fire Protection

The building is not fully sprinkled, isolated areas only.

Electrical

The incoming electrical service is supplied by a utility-owned pad mount transformer serving the MDP, located in the original building. The later date additions are fed from the MDP. Lighting is primarily fluorescent, recessed fixtures in corridors and classrooms. The original building was renewed in 1985, Addition 2 was renewed in 1990, Addition 4 (Modules), original to construction, 1997. All corridors and classrooms have been changed to electronic ballasts and T8 lamps under a system wide program in 2007.

Communications and Security

Facility Executive Summary

The main fire alarm system is addressable system, 2005. There are audible and strobe signal devices in the corridors only, not in classrooms. There is a centrally monitored security system, intercom, and phone/data systems.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual and medical equipment. The seating for the food service area is a temporary roll out system. The building also includes window treatment, food service equipment and a kitchen grease trap.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where three out of 56 are handicap spaces and paths to building entrances. Drainage is generally adequate and is handled by surface discharge and area drains. The site includes concrete sidewalks, site lighting for vehicular and pedestrian night traffic and an underground fuel tank installed in 1993. The water supply is provided from the campus distribution system.

Current Repair Cost: \$3,168,983.08**Replacement Cost:** \$7,986,219.30**FCI:** 39.68%

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Cherokee Lane Elementary

Address: 9000 25th Avenue, Adelphi, MD 20783

Attributes:

School Area	1
Congressional	4
County Council	1
Historical Building	No
Legislative	47
Original Building	Built in 1962, 25,654 S.F.
School Addition 1	Built in 1964, 18,665 S.F.
School Board District	1
School Grade	PreK-6th

General Information:

Function: Elementary School
Gross Area: 44,319 S.F.

Year Built:
Last Renovation:

Facility Description:

Cherokee Lane Elementary School is a one-story, 44,319 square foot facility located on a 21.8-acre site close to I-495 (Capital Beltway) in Adelphi, MD. The original building was constructed in 1962 and an addition was constructed in 1964, with no major renovation. In 2008 an underground fuel tank was installed to replace the original from 1962 and also some minor projects were performed that included interior painting.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and is wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap stalls are available in the gang restrooms. Toilet configurations and accessories are adequate. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements. All programs in this one-story facility are accessible to the handicap or disabled person. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. During the 2008 Assessment it was noted that the 1964 addition was closed due to foundation problems. The building does not have a basement, but does have a crawl space.

B. SHELL

The superstructure of the facility is load bearing masonry walls with concrete slab floor and open web steel joist roof framing.

The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow metal steel doors. The metal windows throughout the building are original. Most of the classrooms have a fire exit window. The exterior doors throughout the building are original.

The building has low-slope, built up roof with gravel ballast and a metal sloped roof near main entrance. The built-up roof on the 1964 addition was replaced in 2005 and the roof on the 1962 addition was replaced in 1993.

C. INTERIORS

Interior partition walls typically include painted CMU with ceramic tiles in the corridors. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards. Metal toilet partitions are original. The facility does not have stair construction.

Interior wall finishes are typically painted CMU. The floor finishes throughout the building are typically vinyl asbestos tiles (VAT), carpet, and ceramic tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 11,874 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended acoustical tiles. The acoustical ceiling tiles throughout the building were partially replaced in corridors and classrooms.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original. The flush valves on the toilets and sinks were replaced in 2004. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by boilers that were replaced in 2007 and supply fin tube radiators and terminal units throughout the building. Cooling is provided, a split system for the office and individual window units for each classroom. Distribution is a 2-pipe system to fin tube radiators. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

Facility Executive Summary

A pad mounted transformer provides service to the main disconnect. Minor additions were made to accommodate the window units but most of the distribution system is original. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors and is inadequate.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, and medical equipment. The library has shelves and furniture; such as tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains. The building also includes food service equipment, a kitchen grease trap, fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in the multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where they have two reserved handicap spaces out of total 54 parking spaces. Drainage is generally handled by surface discharge. The parking lot and site does not flood when it rains. The site includes concrete sidewalks, site lighting for vehicular and pedestrian night traffic. Utilities include water, sewer and gas lines. The underground fuel tank was replaced in 2008.

Facility Executive Summary

Facility: \Elementary Schools\Chillum Elementary

Address: 1420 Chillum Road , Hyattsville, MD 20782

Attributes:

School Area	2
Congressional	8
County Council	2
Historical Building	No
Legislative	47
Original Building	Built in 1952, 29,125 S.F.
School Addition 1	Built in 1955, 7,517, S.F.
School Addition 2	Built in 1969, 3,054, S.F.
School Addition 3	Built in 1978, 5,250, S.F.
School Board District	3
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	44,946 S.F.

Year Built:

Last Renovation:

Facility Description:

Chillum Elementary School is a two-story, 44,946 square foot facility located on a 9.8-acre site close to Eastern Avenue NE in Hyattsville MD. The original building was constructed in 1952 and additions were constructed in 1955, 1969, and 1978, with major renovation performed in 1978. In 2012 some minor projects were performed that included security updates and a kitchen grease trap.

ACCESSIBILITY ISSUES

This facility was designed and constructed prior to any consideration for handicap accessibility. The general parking area and entrance path are at an incline and do not provide an equitable path to the main entrance. Several of the secondary entrances are at different elevations. In addition, interior systems, such as restrooms, signage, hand railing, door hardware, and drinking fountain, do not meet ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is steel frame and concrete frame load bearing masonry walls. Floor construction is slab on grade and metal pan with lightweight fill. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over pre-cast tilt-up concrete panels and metal siding. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat or low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes steel risers and treads with rubber finishes. The interior wall finishes are typically painted CMU and drywall. Floor finishes in common areas are typically vinyl composition tile and carpet. Floor finishes in assignable spaces are typically vinyl tile and carpet. VAT floor tile was replaced in 2008. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. BUILDING SERVICES

Conveying Systems

The school has one hydraulic elevator which was installed in 1971.

Mechanical/Plumbing

The school has two steam boilers, which were installed in 1987. Each of the boilers uses natural gas as primary fuel. The system is a 2-pipe distribution system with individual controls in each classroom. Heating is provided through unit ventilators, original to the building, 1952. Air conditioning is provided in the entire school by package rooftop units, cooling only, in each respective building, 1995. Plumbing fixtures in the entire school are flush valve water closets, estimated at 1978.

Fire Sprinkler System

The building is not fully sprinkled; in isolated areas only.

Electrical

The incoming electrical service is supplied by a utility owned pad mount transformer serving the MDP, located in the original building which was installed in 1978. The later date additions are fed from the MDP power service is provided by a singular dry-type transformer. There is an emergency generator which was installed in 1978. Lighting is primarily recessed fluorescent units with T8 lamps, which were installed in 1995.

Facility Executive Summary

Fire Protection/Life Safety Systems

The main fire alarm system is an addressable system, which was installed in 2004. There are audible and strobe signal devices in the corridors. There is a centrally monitored security system, intercom, and phone/data systems.

E. EQUIPMENT & FURNISHINGS

The building includes fixed darkroom, library, theater and stage, audio-visual and medical equipment that. The building also includes food equipment service, a kitchen grease trap replaced in 2012, fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where two out of 54 are handicap spaces and paths to building. Drainage is generally handled by surface area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic and an underground fuel tank installed in 1994. The water supply is provided from the campus distribution system.

Current Repair Cost: \$7,470,667.48**Replacement Cost:** \$12,186,590.21**FCI:** 61.30%

Facility Executive Summary

C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$193,717	\$100,927	\$294,644	Necess ary- 2-5 Yrs	Deferred Maintena nce	The interior spaces of this building have been painted at different times based on the funding and needs. Most of the first floor was recently repainted. The second floor appears to have been painted over ten years ago. This project provides a budgetary consideration to repaint high traffic surfaces and also long term overall school interior painting.
C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$51,100	\$26,623	\$77,723	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet is beyond the expected life cycle for this type of application. There are several stains and rips that may cause tripping hazards. Replacement is recommended within the next two to five years.

General Information:

Function: Elementary School

Gross Area: 44,379 S.F.

Year Built:**Last Renovation:****Facility Description:**

Clinton Grove Elementary School is a two-story, 44,379 square foot facility located on a 13.7-acre site close to MD Route 5 in Clinton, MD. The original building was constructed in 1955 and additions were constructed in 1961 and 1974, with no major renovation performed. In 2008 some minor updates were performed that included replacement of roof top units.

This school is part of the Special Education Inclusion Initiative. A major renovation and 25,000 S.F. building addition are currently being programmed for a 2015 construction completion that will improve existing building conditions and incorporate the special education program requirements into the new addition.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The main entrance has a ramp and doors wide enough for wheel chair. An exterior ramp provides handicap access to the second floor. The restrooms do not comply with all ADA accessibility guidelines. Handicap accessible toilet stalls are available only on second floor. Interior graphics and/or signage for ADA compliance are inadequate or missing in the building (on the exterior and restroom doors). Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The facility does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure of the building is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow core metal steel doors. Exterior metal doors are original. The roof was replaced in 2008.

C. INTERIORS

Interior partition walls typically include painted concrete masonry unit (CMU) with glazed block wainscot in the corridors and folding metal partitions. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalk boards. Toilet accessories such as the metal toilet partitions are original. The mirrors in the restrooms also need an upgrade. The facility has stairs with concrete treads and risers and steel frame with ceramic tile floor finish. The stairs are original.

Interior wall finishes are typically painted CMU folding metal partitions. Floor finishes are typically vinyl asbestos tiles (VAT), carpet, vinyl composition tile (VCT), carpet, and ceramic tiles in restrooms. The vinyl composition tiles, vinyl asbestos tiles, and ceramic tiles are original. According to the A.H.E.R.A. Management Plan, the school contains 12,500 square feet of 9x9 vinyl asbestos tiles and 7,940 square feet of vinyl asbestos tiles. Ceiling finishes are typically suspended acoustical tiles.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal and external, with roof drains.

HVAC

Heating is provided by two oil and gas-fired boilers. Cooling is supplied by 14 rooftop package. Two were replaced in 1997. Heating / cooling for the addition is provided by three gas-fired rooftop units that were installed in 1974. The heating/cooling distribution system is ductwork. System is using fan coil units, and air-handling units for the cafeteria. Fresh air is supplied by air handling units. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not controlled by an energy management system.

Fire Protection

Facility Executive Summary

The building does not have a fire sprinkler system. There are a few smoke detectors in the corridors and storage rooms. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution from branch panel wiring is typically copper. Lighting and branch wiring is typically serving surface-mounted fluorescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators. The system is activated by pull stations and smoke detectors, is centrally monitored outside the building. The telephone and data systems are combined and include dedicated closets or cabinets that are secured, but inadequately cooled. The building includes an internal security system that is actuated by door contact and motion detectors. It has a dedicated grounding system and lightning protection that is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes library, theater and stage, and medical equipment. The library has shelving. The building also includes food equipment service, kitchen grease trap, fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on site where two are handicap spaces out of total 54 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Current Repair Cost: \$8,691,114.26**Replacement Cost:** \$12,274,678.94**FCI:** 70.81%

Facility Description:

Columbia Park Elementary School is a two-story, 57,372 square foot facility located on an 8-acre site close to I-495 (Capital Beltway) in Landover, MD. The original building was constructed in 1928 and additions were constructed in 1951, 1955, 1962, 1967, 1974, and 1989, with no major renovations performed. In 2011 exterior windows were replaced, and in 2012 the network infrastructure and a kitchen grease trap was also updated. In 2011 minor interior renovation/improvements were also made. Unit ventilators and DDC controls are scheduled to be replaced in 2013.

ACCESSIBILITY ISSUES

This two story facility does not have elevator or ramp access to the second floor, but they are reportedly unnecessary due to limited use of the second floor. Entrances to the main building and additions have curb cuts and wide enough doors for wheel chair access. Interior door hardware, restrooms, and drinking fountains are not handicap accessible. The renovated gym appears to comply with most ADA requirements. Further study by an ADA Specialist is required to ensure compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The roof was replaced in 1997-1998. The exterior enclosure is comprised of walls of brick veneer over CMU. One side of exterior wall on the modular addition was replaced with wood panels. Exterior windows were replaced in 2011. Exterior doors are hollow metal steel. Roofing is a combination of pitched roof (original building) and low-slope with built-up roof and asphalt composition roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving and handrails, toilet. Stair construction includes concrete risers and treads with terrazzo finishes. Interior wall finishes are typically drywall and tile. Floor finishes in common areas are typically vinyl composition tile and carpet. Floor finishes in assignable spaces are typically vinyl tile, carpet, and wood. Vinyl asbestos tiles have been observed in several areas. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 29,710 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically or suspended acoustical panels.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Hot water is provided by gas fired water heaters. Sanitary waste system is cast iron. Rain water drain system is a combination of roof drains and gutters. The building does not have a sprinkler system.

HVAC

Facility Executive Summary

Heating is provided by two dual fired boilers that supply fin tube radiators and terminal units throughout the building. The in-ground fuel oil tank lacks level and leakage detectors. Cooling is provided by multiple window units in classrooms, roof mounted package units for the gym, media center and office area, and heat pumps in the modular addition. Unit ventilators are scheduled to be replaced in 2013. Heating distribution is through a two pipe system to the individual spaces. Fresh air is supplied by roof mounted air handlers and infiltration. There is a ventilator system in the kitchen storage area. Controls are low voltage electrical thermostats and pneumatics. The system is not centrally monitored or controlled but is scheduled to be replaced in 2013.

Electrical

A pad mounted transformer provides service to a main disconnect. Lighting is primarily recessed fluorescent fixtures. Exit signs are properly placed and illuminated.

Communication and Security

The fire alarm system was replaced in 2008. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors. Some network updates were completed in 2012.

E. EQUIPMENT & FURNISHINGS

The building includes fixed casework and cabinets, window blinds, food service equipment and a kitchen grease trap updated in 2012.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surfaces parking is available on site where three out of 75 are handicap spaces with paths to building entrances. Drainage is generally handled by surface drainage. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, and electrical. A 6,000 Gal Underground fuel tank was installed in 1994 to replace original.

Current Repair Cost: \$8,468,784.95**Replacement Cost:** \$14,859,670.58**FCI:** 56.99%

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

Facility: \Elementary Schools\Columbia Park Elementary\Gymnasium

Attributes:

None

General Information:

Function: Elementary School

Year Built: 1974

Gross Area: 6,534 S.F.

Last Renovation: 2006

Facility Description:

Current Repair Cost: \$212,466.11

Replacement Cost: \$1,633,225.48

FCI: 13.01%

Original Building	Built in 1968, 43,984 S.F.
School Board District	6
School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	43,984 S.F.	Last Renovation:

Facility Description:

Concord Elementary School is a one-story, 43,984 square foot facility located on a 9.4 -acre site close to I-495 (Capital Beltway) in District Heights, MD. The original building was constructed in 1968, with no additions constructed or major renovations performed since that time. In 2012 the kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and wide enough doors for wheel chair access. Handicap toilet stalls are available in the gang restrooms. Toilet configurations and accessories do not comply with all the ADA accessibility guidelines. All the programs in the facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The building does not have a basement, cellar, or sub-floor, but does have a crawl space.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow metal steel doors. The metal windows, flashing and caulking around the windows throughout the building are original. Most of the classrooms have a fire exit windows. The exterior doors throughout the building are original. The original building has low-slope built up roof with gravel ballast, which was replaced in 2001.

C. INTERIORS

Interior partition walls typically include painted CMU with glazed block wainscot in the corridors and folding metal partition walls in six classrooms. Interior doors are generally hollow core wood doors with hollow metal frames. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards. Metal toilet partitions are original, rusted/stained. The facility has a metal ladder to access the roof hatch.

Interior wall finishes are typically painted CMU and folding metal partitions. Floor finishes throughout the building are typically vinyl asbestos tiles (VAT), carpet, terrazzo, and ceramic tiles. The carpet in the main office is original. There is terrazzo floor finish in the kitchen. Ceiling finishes are typically suspended acoustical needlepoint tiles that are original.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Fixtures are mostly original. Sinks, faucets, and other plumbing fixtures were not updated, while the toilets were updated in 2007. Most of the water fountains are original. Domestic water distribution is primarily copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains and scuppers. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided by two oil/gas-fired boilers, which were installed in 2007. Cooling is supplied by rooftop package units, which were installed 2002. The heating/cooling distribution system is ductwork and direct for cooling and 2-pipe for heating using unit ventilators and fin-tube radiators. Fresh air is supplied by infiltration and air handling units. Ceiling-mounted exhaust fans are installed in restrooms (upgraded in 2006). Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building has 50% fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pole mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Several switch gears are original. Lighting and branch wiring is serving recessed, surface-mounted and pendent-mounted fluorescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors which are ADA compliant. The system is activated by pull stations and smoke detectors and centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system, which was installed 2007 and is actuated by contact devices and is centrally monitored.

Other Electrical Systems:

The building has dedicated grounding for lighting protection and an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, and medical equipment. The library has shelves and furniture. The school has a nurse's room with two beds, food service equipment and a kitchen grease trap replaced in 2012. The school has a stage with lights and curtains that are original. The building also includes fixed casework/cabinetry in the classrooms, window treatment and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where they have two reserved handicap spaces out of total 50 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic and an 8,000 Gal underground fuel tank replaced in 2006.

Facility: \Elementary Schools\Concord Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems B2020		Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$5,382,185 \$138,110	\$2,804,118 \$71,955	\$8,186,303 \$210,065	Necess ary- 2-5 Yrs	Building Integrity	Exterior windows throughout the building are original and beyond their useful life. No major water leaks were reported through windows throughout the building. The flashing and caulking around the windows are in fair condition, but are beyond their useful life. The single pane windows are not energy efficient.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$101,163	\$52,706	\$153,869	Necess ary- 2-5 Yrs	Building Integrity	Exterior doors throughout the building are original, beyond useful life, and in poor condition (difficult to operate). Some exterior doors do not close properly. The door hardware is beyond useful life and in fair condition.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$131,072	\$68,289	\$199,361	Necess ary- 2-5 Yrs	Capital Renewal	Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards, which are beyond useful life and in fair condition. Metal toilet partitions are rusted, stained, and in poor condition. All the old toilet accessories are beyond useful life and need to be replaced.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$189,571	\$98,767	\$288,338	Necess ary- 2-5 Yrs	Appearance	The paint on some interior walls is peeling and needs to be repainted. The school was partially painted a year ago.
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$28,160	\$14,671	\$42,831	Necess ary- 2-5 Yrs	Capital Renewal	The carpet in the main office is beyond useful life and in poor condition (worn and stained).
	C3030	Ceiling Finishes	System	Beyond Useful Life	Renew System	1	Ea.	\$313,166	\$163,160	\$476,326	Necess ary- 2-5 Yrs	Capital Renewal	Acoustical ceiling tiles throughout the building are beyond useful life and in poor condition (stained and warped, especially in classrooms 203, 205, and 208).
	C3020410	VAT (Resilient Flooring)	System	Beyond Useful Life	Renew System	1	Ea.	\$617,883	\$321,917	\$939,800	Necess ary- 2-5 Yrs	Environmental	Vinyl asbestos tiles throughout the building are in fair to poor condition (worn and cracks on surface).

General Information:

Function:	Elementary School
Gross Area:	139,211 S.F.

Year Built:**Last Renovation:****Facility Description:**

Cool Spring Elementary School is a partial two-story, 139,211 square foot facility located on a 21.74-acre site close to I-495 (Capital Beltway) in Adelphi, MD. The original building was constructed in 1955 (Formerly Regina Catholic HS) and additions were constructed in 1959, 1965, and 1994, with major renovation, modernization and upgrades done in 1994, when purchased by PGCPs. In 2009 the underground fuel tank was replaced.

ACCESSIBILITY ISSUES

The main entrance appears to comply with ADA requirements. There are adequate ADA toilet facilities, signage, and fire alarm system. However, further study by an ADA Specialist is required to ensure compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. The building has a basement and sub-floor of cast in place construction.

B. SHELL

The superstructure is concrete frame. Floor construction is slab on grade and metal pan with lightweight fill. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of CMU and brick veneer over CMU. Exterior windows are aluminum sash with operable thermo pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving, handrails and toilet partitions. Stair construction includes steel risers and treads with rubber finishes. The interior wall finishes are typically painted CMU with some plaster and drywall and generally. Floor finishes in common areas are typically vinyl composition tile and some carpet. Floor finishes in assignable spaces are typically vinyl tile and carpet. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building includes hydraulic elevators.

Plumbing

Domestic water distribution is copper, galvanized steel, and plastic. Sanitary waste system is cast iron and plastic. Rain water system is external with roof scuppers.

HVAC

Heating is provided by two gas fired boilers that were installed in 2007. The boilers have the capacity to fire #2 fuel oil. Cooling is supplied by one air cooled chiller and few rooftop units. The heating/cooling distribution system is a ductwork and 2-pipe system using air handlers, fan coil units, and unit ventilators. Fresh air is supplied by infiltration and air handling units. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Standpipes are included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are combined and include dedicated closets or cabinets. The building includes an internal security system that is actuated by optical devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, and medical equipment. The building also includes fixed casework, window treatment, furnishings, food service equipment and a kitchen grease trap.

F. SPECIAL CONSTRUCTION

The building does not include special construction

G. SITE

Surface parking is available on site where seven out of approximately 350 are handicap spaces with paths to building. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic and an underground storage tank of 8,000 gallons replaced in 2009. The water supply is provided from the municipal distribution system.

Current Repair Cost: \$9,342,714.56**Replacement Cost:** \$37,642,816.35**FCI:** 24.82%

Facility Executive Summary

Facility: \Elementary Schools\Cool Spring Elementary\1994 Addition

Attributes:

None

General Information:

Function: Elementary School

Year Built: 1994

Gross Area: 17,300 S.F.

Last Renovation:

Facility Description:

Current Repair Cost: \$1,263,158.00

Replacement Cost: \$4,470,135.12

FCI: 28.26%

School Grade	PreK-6th

General Information:

Function: Elementary School

Gross Area: 47,370 S.F.

Year Built:**Last Renovation:****Facility Description:**

Cooper Lane Elementary School is a one-story, 47,370 square foot facility located on a 9.1-acre site close to I-295 (Baltimore-Washington Parkway) in Landover Hills, MD. The original building was constructed in 1962 and additions were constructed in 1963, 1966, and 1993 (Six Modulares), with no major renovations. In 2012 there was asbestos abatement of VAT tiles that were replaced with VCT tiles. In the original building the ceiling finishes, communication and security systems and a kitchen grease trap were also replaced in 2012.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements, with the exception of the 1993 addition (5,888 S.F.). Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls and slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is load bearing CMU walls. Floor construction is slab on grade. Roof construction is steel joists and cementitious fiber decking. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with fixed and operable single-pane glazing. Exterior doors are aluminum frame glass at the entrance plus hollow metal steel in hollow metal frames. The windows and doors are of the original construction. Roofing is typically low-slope with built-up roof with gravel ballast, which was replaced in 2007.

C. INTERIORS

Interior partition wall types are typically painted CMU. Interior doors are generally solid core wood with hollow metal frames. Doors in the 1960s buildings and the 1993 addition have bored lockset hardware. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. The interior wall finishes are typically painted on CMU including toilets. The corridors and toilets have a glazed block wainscot. Floor finishes in common areas and assignable spaces are typically vinyl composition tile. In 2012 there was asbestos abatement of VAT tiles replaced with VCT tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels that were replaced in 2012. Restrooms have painted drywall ceilings.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

There is one unisex ADA toilet room in the modular addition. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater, which was installed in 1993, with a separate water tank and recirculating pump.

HVAC

Heating is provided by two boilers that were installed in 2008. Cooling is supplied by individual room window unit. The heating distribution system is a 2-pipe system using air handlers, fin tube radiators, and unit ventilators. Fresh air is supplied by air handlers. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers 120-240 volt power to a switchgear main panel. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted and pendent-mounted fluorescent and incandescent. Emergency battery powered lighting is present and exit signs are present at exit doors and near stairways and typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common spaces, interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is reported to be centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by optical devices and is centrally monitored. The system was updated in the original building in 2012.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library and audio-visual equipment. The building also includes fixed casework, window treatment, furnishings, food service equipment and a kitchen grease trap replaced in 2012.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where there are two out of 50 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an underground fuel oil tank replaced in 1988.

Current Repair Cost: \$6,465,298.43**Replacement Cost:** \$13,174,389.30**FCI:** 49.07%

General Information:

Function:	Elementary School	Year Built:
Gross Area:	72,390 S.F.	Last Renovation:

Facility Description:

Deerfield Run Elementary School is a one-story, 72,390 square foot facility located on a 23.3-acre site close to I-295 in Laurel, MD. The original building was constructed in 1975, with no additions constructed or major renovations performed since that time. A POD conversion of 23,302 S.F. into 20 classrooms is currently being programmed for a 2013 construction completion.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The ramp to the main entrance is not adequate and the doors lack proper hardware to facilitate handicap accessibility. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior doors are hollow metal steel. Roofing, which was replaced in 1999, is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and drywall. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, shelving, handrails and toilet partitions. The interior wall finishes are typically drywall, tile, and glazed block. Interior painting was updated in 2003. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, carpet, and VAT. Floor finishes in assignable spaces is typically vinyl tile, carpet, VAT and rubber gym floor. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 2,216 square feet of vinyl asbestos tiles and 180 square feet of asbestos-containing vinyl sheet flooring. Ceiling finishes in common areas are typically plaster and suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster, suspended acoustical panels and exposed deck.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets, which were installed in 2008. Domestic water distribution is original and consists of copper. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drainage system is internal with roof drains. The building has a sprinkler and standpipe system.

HVAC

Heating is provided by two steam dual fired boilers that supply roof mounted central station air handlers, fin tube radiators, and terminal units throughout the building. Cooling is provided by an ice based thermal storage system, including a chiller and cooling tower. Distribution is by a 2-pipe system and metal duct work from the air handlers to the spaces. Fresh air is supplied by the air handlers. Controls are low voltage electrical thermostats, pneumatic, and a digital system for the ice storage system. The storage system is monitored and controlled from district office.

Electrical

A pad mounted transformer provides service to a main disconnect. Electrical service was upgraded in 1994 to accommodate the thermal storage system, but most of the system is original. Lighting has been upgraded to electronic ballasts and T-8 lamps. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building has an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of visual/audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors and is inadequate.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), and medical equipment. The building also includes fixed casework furnishings, window treatments, food service equipment and a kitchen grease trap.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where there are four out of 137 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, electrical and underground fuel tank.

General Information:

Function: Elementary School
Gross Area: 54,415 S.F.

Year Built:**Last Renovation:****Facility Description:**

District Heights Elementary School is a one-story, 54,415 square foot facility located on an 8.4-acre site close to the MD Route 4 in District Heights, MD. The original building was constructed in 1955 and multiple additions were constructed in 1957, 1970, 1979, and 1991, with major renovation done in 1979. In 2012 some minor updates were performed that included network infrastructure and replacement of a kitchen grease trap.

ACCESSIBILITY ISSUES

Efforts were made to make this one-story facility handicap accessible; a handicap parking space was placed near the main entrance, curb cuts and ramps to the main entrance door were installed, and handicap accessible sinks and metal handrails were installed in some of the restrooms. However, water fountains are not handicap accessible, toilet stalls do not appear to be wide enough for a wheel chair, and there are no interior graphics and/or signage indicating handicap accessibility in the school. Furthermore, there are no push-button automatic door openers for the main entrance doors, which are heavy. Therefore, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. The building does not have a basement, but does have a crawl space of CMU construction.

B. SHELL

The superstructure is load bearing masonry walls. Floor construction is metal pan with lightweight fill. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of standing seam metal panels over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof replaced in 2007.

C. INTERIORS

Interior construction partition wall types typically include painted CMU, glazed block wainscot in the corridors, brick, and drywall. Interior doors are generally solid core wood and hollow metal doors with hollow metal frames. Interior door hardware does not operate properly due to wear and tear. Interior fittings include chalk and tack boards, graphics, shelving, toilet accessories, toilet partitions and handrails. Stair construction in the boiler room includes concrete risers and treads with painted concrete finishes. The interior wall finishes are typically painted CMU, plaster, drywall, and ceramic tiles. Modular classroom walls are typically painted drywall. Floor finishes in common areas are typically terrazzo, ceramic tile, and vinyl composition tile. Floor finishes in assignable spaces are typically vinyl composition tile, carpet, and wood. Carpet floor finishes in offices, classrooms, and library. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 11,870 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Sinks, faucets, urinals, toilets and other plumbing fixtures are original. Most of the water fountains are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by gas hot water heater.

HVAC

Facility Executive Summary

Heating is provided two original gas fired boilers. Cooling is supplied by two air-cooled chillers and roof top packaged units. The chillers were installed in 2007. The heating/cooling distribution system is ductwork, 2-pipe, air handlers, and unit ventilators. Fresh air is supplied by infiltration and air handlers. Ceiling exhaust fans are in bathrooms. Controls and instrumentation are mostly digital and not centrally controlled by an energy management system.

Fire Protection

The building has fire sprinkler system in most of the occupied areas. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency power and lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and heat sensors and is centrally monitored. The telephone and data systems are combined and included in dedicated closets or cabinets that are not adequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored. Some minor updates were performed for network infrastructure in 2012.

Other Electrical Systems:

The building has an emergency generator, which was installed in 2006.

E. EQUIPMENT & FURNISHINGS

The building includes fixed theater, stage, laboratory equipment, audio-visual, library, and medical equipment. The building also includes fixed casework, window treatment, floor grilles, mats, multiple seating furnishings, food service equipment and a kitchen grease trap replaced in 2012.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt parking surface parking is available on-site where one out of 63 is handicap space with paths to building entrances. Drainage is generally adequate and is handled by surface discharge in the grassed areas and area drains in the paved areas. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic, especially the lower end. The school has an 8,000 gallon fuel oil tank with level and leak detection systems.

Current Repair Cost: \$9,844,859.65**Replacement Cost:** \$15,207,743.26**FCI:** 64.74%

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$1,289,374	\$671,764	\$1,961,138	Necessary- 2-5 Yrs	Capital Renewal	Almost all of the unit ventilators, air handling units, and other terminal units are original. Some of the roof top units have control problem and leaking and rusted out. The air handles have few leaks in the ceiling and in the around the condensation lines because of deteriorating insulation.
D3020	Heat Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$282,157	\$147,004	\$429,161	Necessary- 2-5 Yrs	Capital Renewal	The heating generation system is original and needs update. The school engineer indicated that the system keeps going off and that repairs of the burners are needed. The system expired and needs replacement.
D3030	Cooling Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$330,235	\$172,053	\$502,288	Necessary- 2-5 Yrs	Capital Renewal	
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$522,549	\$272,248	\$794,796	Necessary- 2-5 Yrs	Capital Renewal	The HVAC distribution system is original and has a few leaks and control issues. Ductwork is deteriorating, vents are dirty and clogged, piping insulation is out and leaking condensate water.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$47,593	\$24,796	\$72,389	Necessary- 2-5 Yrs	Environmental	Some of the control system was replaced but mostly is still original and beyond useful life. It was reported that some class rooms get too hot in the winter and too cold in the summer.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$37,880	\$19,735	\$57,615	Necessary- 2-5 Yrs	Environmental	
D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$195,713	\$101,966	\$297,679	Necessary- 2-5 Yrs	Building Integrity	
D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$86,930	\$45,290	\$132,220	Necessary- 2-5 Yrs	Capital Renewal	The electrical distribution system and switch-gear is mostly original and is beyond useful life. Some panels have no expansion capacity.
D5020	Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$739,144	\$385,094	\$1,124,238	Necessary- 2-5 Yrs	Capital Renewal	A small percentage of the lighting system was replaced but the majority is beyond useful life and needs update. Some fixtures and light covers are damaged or missing and ballasts are out of order.
D5030	Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$135,494	\$70,592	\$206,086	Necessary- 2-5 Yrs	Functional Adequacy	The communication and security systems are mostly original and appear to be inadequate. There are no dedicated closets and wires are scattered around the school.
D5090	Other Electrical Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$3,885	\$2,024	\$5,909	Necessary- 2-5 Yrs	Capital Renewal	Panel boards, electrical outlets, and other electrical equipment are mostly original and beyond useful life. Some boards have no capacity for expansion.

General Information:

Function: Elementary School

Gross Area: 50,499 S.F.

Year Built:**Last Renovation:****Facility Description:**

Dodge Park Elementary School is a one-story 50,499 square foot facility located on a 10-acre site close to Interstate 495 (Capital Beltway) in Landover, MD. The original building was constructed in 1965 and additions were constructed in 1970 and 1990, and major renovation was performed in 2002. In 2012 some minor projects were performed that included kitchen grease trap and PTZ cameras replacement.

ACCESSIBILITY ISSUES

The facility is generally not in compliance with ADA requirements. However a further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, entrances, interior signage, restrooms, drinking fountains, and door hardware.

A. SUBSTRUCTURE

The building typically is a slab-on-grade and concrete footings and foundation walls. The building has a crawl space that is constructed of poured in place concrete.

B. SHELL

The superstructure is reinforced concrete masonry with face brick and reinforces concrete masonry load bearing walls. Floor construction is slab on grade. Roof construction is a built up roof system on concrete. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. Roofing is pitched and low-slope with built-up roof.

C. INTERIORS

Interior construction partition wall types typically include painted CMU and glazed block wainscot. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers toilet accessories, shelving, handrails, and toilet partitions. Stair construction includes concrete risers and treads with tile finishes. Interior wall finishes are typically painted CMU and glazed block. Floor finishes in common areas is typically ceramic tile, carpet, and stage wood. Floor finishes in assignable spaces is typically terrazzo and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 39,600 square feet of vinyl asbestos tile. Ceiling finishes in common areas are typically plaster, suspended acoustical panels, and ACT. Ceiling finishes in assignable areas are suspended acoustical panels. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 36,500 square feet of asbestos containing fissured ceiling tile.

D. SERVICES**Conveying**

The building does not have conveying system.

Plumbing

Sinks, faucets, fountains and other plumbing fixtures were not updated, while urinals and toilets were. Most of the water fountains are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by new gas hot water heater.

HVAC

Heating is provided by two gas/oil fired boilers. Cooling is supplied by new air-cooled chiller and two roof top units. Most of the HVAC system was updated in 2000 during the school-wide renovation. The heating/cooling distribution system is ductwork, 2-pipe, and air handlers. Fresh air is supplied by infiltration and air handlers. Ceiling exhaust fans are in restrooms. Controls and instrumentation were upgraded to digital for both heating and cooling and are centrally controlled by an energy management system.

Fire Protection

Facility Executive Summary

The building does not have fire sprinklers. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Some of the switch gear is original but the remaining was updated in 2000. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Illumination in most of the classrooms was updated in 2000. Some of the restrooms are still original. Emergency power is not present while emergency lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobes annunciators in common spaces and interior corridors, and was updated in 2000. The system is activated by pull stations and heat sensors and is not centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are not adequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored. PTZ cameras were replaced in 2012.

Other Electrical Systems

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, and medical equipment. The building also includes fixed casework, window treatment, floor grilles, mats, food service equipment and a kitchen grease trap replaced in 2012.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where there are two out of the 73 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon fuel oil tank of dual wall construction.

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Dodge Park Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$1,755,977 \$130,507	\$914,864 \$67,994	\$2,670,842 \$198,501	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior windows are aluminum frame with single pane glazing that are in fair condition, with some of the perimeter caulking damage. The windows are beyond useful life and should be replace with energy efficiency windows.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$79,567	\$41,454	\$121,022	Necess ary- 2-5 Yrs	Deferred Maintena nce	The exterior doors are hollow metal with hollow metal frames in fair condition. The paint on the doors and frames is fading and showing signs of rust and the hardware is outdated.
	C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$84,619	\$44,086	\$128,705	Necess ary- 2-5 Yrs	Deferred Maintena nce	The interior door finishes are worn and fading and the hardware is not ADA compliant. The doors are beyond useful life and need to be replaced.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$123,771	\$64,485	\$188,256	Necess ary- 2-5 Yrs	Deferred Maintena nce	The millwork is deteriorating from age, comming unglued, and is fading. The shelving is old and sagging.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$177,658	\$92,560	\$270,217	Necess ary- 2-5 Yrs	Deferred Maintena nce	The paint is beyond useful life, with scuff marks and smudges throughout the building, and some peeling paint. The paint needs to be redone throuhout the building.
	C3020410	VCT	System	Beyond Useful Life	Renew System	1	Ea.	\$177,300	\$92,373	\$269,673	Necess ary- 2-5 Yrs	Deferred Maintena nce	The VCT is old with cracks and separating tile throughout the building. The tile is beyond useful life and needs to be replaced.
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$45,360	\$23,633	\$68,993	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet is in poor condition due to stains, fading, and wear and tear. Carpet is beyond useful life and should be replaced.
	D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$37,889	\$19,740	\$57,629	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most of the original drainage system was not updated and some areas have slow flow and other sewer backs ups, such as the restroom in the new wing.
	C3020410	Concrete finish flooring	System	Beyond Useful Life	Renew System	1	Ea.	\$1,694	\$883	\$2,577	Necess ary- 2-5 Yrs	Deferred Maintena nce	The drywall ceiling is in poor condition due to stains and pealing paint. The drywall ceiling is beyond useful life and should be replaced.
	C3030110	Drywall Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$6,928	\$3,609	\$10,537	Necess ary- 2-5 Yrs	Deferred Maintena nce

Facility Description:

Doswell E. Brooks Elementary School is a one-story, 56,948 square foot facility located on a 10.6-acre site close to Southern Avenue SE and MD Route 4 in Capital Heights, MD. The original building was constructed in 1953 and additions were constructed in 1959, 1966, and 1989 (four modulars). There is a major renovation and an addition of this school scheduled for completion in 2013.

ACCESSIBILITY ISSUES

Features that address handicap accessibility include curb cuts, entrance ramp, and automatic door openers at the main entrance, accessible wall-mount drinking fountains, elevator, and accessible restrooms. However a further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is load bearing stud walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows and storefront are aluminum with operable glazing. Exterior doors will be hollow metal steel and aluminum, including required panic hardware. Roofing will be typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include concrete masonry unit (CMU) and metal studs. Interior doors are generally solid core/hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails and toilet partitions. The interior wall finishes are typically plaster and paint. Floor finishes in common areas are typically vinyl composite tile and ceramic tile. Floor finishes in assignable areas are typically vinyl composite tile, quarry tile, sealed concrete and carpet. Ceiling finishes in common areas are typically suspended acoustical panels and plaster. Ceiling finishes in assignable areas are typically suspended acoustical panels, plaster and exposed deck.

D. SERVICES**Conveying**

The building does not have a hydraulic elevator.

Plumbing

The plumbing fixtures were replaced in 2006. Domestic water distribution is copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains.

HVAC

Heating is provided by two boilers that supply to fan coil units, fin tube radiators, and terminal units throughout the building. Cooling is provided by chillers/package units. Controls are digital and low voltage electrical thermostats. The system is centrally monitored or controlled.

Fire Protection

Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

A pole mounted transformer provides service to the building. Branch wiring is copper servicing all equipment, receptacles and energy efficient lighting. There are emergency lights in the corridors and exit signs are properly placed and illuminated.

Communication and Security

Facility Executive Summary

The system consists of audible and visual annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, and located in dedicated closets with independent cooling systems. The security system consists of motion sensors and CCTV system.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater with stage, also for different classrooms and medical equipment. The building also includes fixed casework, window treatment, food service equipment, grease trap interceptor and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where 4 out of 57 are handicap spaces with strip paths to building entrance. Drainage is handled by surface discharge and area drains. The site includes concrete sidewalks, lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system.

Current Repair Cost: \$2,130,782.62**Replacement Cost:** \$15,250,294.83**FCI:** 13.97%

School Grade	4th-8th

General Information:

Function:	Elementary School
Gross Area:	45,401 S.F.

Year Built:**Last Renovation:****Facility Description:**

Edgar Allen Poe Elementary School is a two-story, 45,401 square foot facility located on a 5.9-acre site close to MD Route 4 in Suitland, MD. The original building was constructed in 1967 and an addition was constructed in 2002, with no major renovation. The distribution system is scheduled to be updated in 2013 along with some minor projects that include asbestos abatement and lighting upgrades in the steam tunnels.

ACCESSIBILITY ISSUES

Efforts were made to make this two-story facility handicap assessable; a handicap parking spaces were placed near the main entrance, curb cuts and ramps to the main entrance door were installed, and an elevator and handicap accessible restrooms were installed in the 2002 addition. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. The building does not have a basement, but does have a crawl space that is inaccessible.

B. SHELL

The superstructure is steel frame. Floor construction is metal pan with lightweight fill. Roof construction is panels and open web steel joist roof framing. The exterior enclosure is comprised of walls of brick veneer over CMU and painted aluminum storefront panels with glazing. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof and single ply membrane.

C. INTERIORS

Interior partition wall types typically include painted CMU and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, and toilet partitions. Stair construction includes steel risers and treads. Interior wall finishes are typically painted CMU, drywall, and ceramic tile. Floor finishes in common areas of the original building are typically vinyl asbestos tiles and ceramic tiles. Floor finishes in common areas of the 2002 addition are typically vinyl composition tiles and ceramic tiles. Floor finishes in assignable spaces of the original building is vinyl asbestos tiles and carpet. Floor finishes in assignable spaces of the 2002 addition is sheet vinyl. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 27,625 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable spaces are typically suspended acoustical panels and plaster. The kitchen area has plaster ceilings.

D. SERVICES**Conveying**

The building has one hydraulic elevator.

Plumbing

Most of the sinks, faucets, urinals, toilets and other plumbing fixtures were not updated in the original building. Most of the water fountains are original. One fountain was replaced in 2007. Domestic water distribution is copper. Sanitary waste system is cast iron in the original building and is plastic in the new addition. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater.

HVAC

Heating is provided by two gas/oil fired Boilers for the original building. Cooling is supplied by window units and one roof top unit in the original building, and by roof top units in the 2002 addition. The heating/cooling distribution system is ductwork and a 2-pipe system using air handlers, radiators, and unit ventilators. Fresh air is supplied by infiltration. Ceiling exhaust fans are in bathrooms. Controls and instrumentation are pneumatic in the original building and digital in the new addition and not centrally controlled by an energy management system. Distribution system is scheduled to be replaced in 2013.

Fire Protection

Facility Executive Summary

The building does not have fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency power and lighting are not present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and smoke detectors and is centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage equipment, audio-visual and medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt parking surface parking is available on-site where two out of 36 are handicap spaces with path to building entrances. Drainage is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon underground fuel oil tank replaced in 2002.

Current Repair Cost: \$5,490,434.39**Replacement Cost:** \$12,735,560.07**FCI:** 43.11%

General Information:

Function:	Elementary School
Gross Area:	47,010 S.F.

Year Built:**Last Renovation:****Facility Description:**

Flintstone Elementary School is a two-story, 47,010 square foot facility located on an 8.2-acre site close to I-495 (Capital Beltway) in Oxon Hill, MD. The original building was constructed in 1956 and additions were constructed in 1968, 1979, and 1990 (eight modulars), with no major renovation performed. Unit ventilators and DDC controls are scheduled to be replaced in 2013.

ACCESSIBILITY ISSUES

The main entrance has a ramp and entrance doors wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap stalls are missing in the gang restrooms and toilet configurations and accessories are generally inadequate. Interior graphics and/or signage for ADA compliance are inadequate or missing in the building. The school has an elevator that provides handicap access to the second floor. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor, but does have a crawl space.

B. SHELL

The superstructure of the facility is steel/masonry (load bearing masonry walls) with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over concrete masonry unit (CMU), single pane metal windows with fixed and operable frames, and hollow metal steel doors. The exterior doors throughout the building are original. The roof was replaced in 2007. The 1990 addition has a single-ply membrane roof.

C. INTERIORS

Interior partition walls typically include painted CMU with glazed wainscot in the corridors and few gypsum drywalls. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards. Toilet accessories, such as metal toilet partitions, are original. The facility has two steel stairs (steel risers / treads with steel frame and rubber floor finish).

Interior wall finishes are typically painted CMU and drywall. Floor finishes throughout the building are typically vinyl composition tiles, vinyl asbestos tiles, carpet, and ceramic tiles. There is VCT floor finish in the corridors, some classrooms, cafeteria, kitchen, and multipurpose room. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 5,000 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended acoustical tiles.

D. SERVICES**Conveying**

The building has one hydraulic elevator.

Plumbing

Most fixtures are original, except for the low-flow toilets, which were installed in 2007. Domestic water distribution is copper. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water system is internal with roof drains.

HVAC

Heating is provided by two dual fired boilers. Cooling is supplied by an air cooled water chiller. The heating/cooling distribution system is a 2-pipe system using unit ventilators. Unit ventilators are scheduled to be replaced in 2013. Fresh air is supplied by infiltration. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system but is scheduled to be replaced in 2013.

Fire Protection

Facility Executive Summary

The building has a minimal fire sprinkler system and smoke detectors. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting and branch wiring is typically serving recessed and surface-mounted fluorescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system was replaced in 2008. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact devices, but no surveillance, and is centrally monitored.

Other Electrical Systems:

The building has an original emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has adequate shelves and furniture, such as tables and chairs. The nurse's room has two beds. The school has a stage with lights and curtains that are original. The lockers in the corridors are original. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are four reserved handicap spaces out of total 49 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. Underground fuel tank was replaced in 1999.

Current Repair Cost: \$5,944,337.85**Replacement Cost:** \$12,683,672.57**FCI:** 46.87%

Facility: \Elementary Schools\Flintstone Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$3,454,131 \$118,533	\$1,799,602 \$61,756	\$5,253,733 \$180,288	Necess ary- 2-5 Yrs	Deferred Maintena nce	The metal exterior windows throughout the building are beyond useful life and in fair to poor condition (difficult to operate and rusted frames). An exception is the modular classrooms, which have windows and exterior doors in fair to good condition.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$76,062	\$39,628	\$115,690	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior doors throughout the building are original, beyond useful life, and in fair condition (difficult to operate).
	C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$76,834	\$40,030	\$116,864	Necess ary- 2-5 Yrs	Deferred Maintena nce	Interior doors are in fair operating condition, with chipped corners and worn surface finishes. The door hardware is in fair condition. The interior doors in the modular classrooms (1990 addition) are in good condition.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$111,969	\$58,336	\$170,305	Necess ary- 2-5 Yrs	Deferred Maintena nce	Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards which are beyond useful life and in fair condition. Metal toilet partitions are original, rusted/stained, and in poor condition. Toilet accessories are beyond useful life and needs to be replaced. The mirrors in the restrooms are in fair condition and need an upgrade.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$162,934	\$84,889	\$247,823	Necess ary- 2-5 Yrs	Deferred Maintena nce	The paint on some partition walls is peeling and needs to be repainted.
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$41,434	\$21,587	\$63,021	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet in the classrooms in both original building and the 1990-addition is beyond useful life and in poor condition (worn and stained).
	C3030	Ceiling Finishes	System	Beyond Useful Life	Renew System	1	Ea.	\$303,861	\$158,311	\$462,172	Necess ary- 2-5 Yrs	Deferred Maintena nce	Acoustical ceiling tiles throughout the building are beyond useful life and in poor condition (stained and warped).
	D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$272,201	\$141,816	\$414,017	Necess ary- 2-5 Yrs	Deferred Maintena nce	Original systems.
	D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$22,394	\$11,667	\$34,061	Necess ary- 2-5 Yrs	Deferred Maintena nce

General Information:

Function: Elementary School

Gross Area: 35,971 S.F.

Year Built:**Last Renovation:****Facility Description:**

Forest Heights Elementary School is a two-story, 35,971 square foot facility located on a 13.2-acre site close to I-495 (Capital Beltway) and MD Route 295 (Baltimore-Washington Parkway) in Oxon Hill, MD. The original building was constructed in 1953, with additions constructed in 1955 and 1968 and no major renovations performed. In 2010 there were some minor projects completed that included re-caulk of exterior windows and glass replacement as needed, and replacement of some ceiling tiles. In 2011 the boilers and domestic water piping system were replaced.

ACCESSIBILITY ISSUES

The school has no elevator and programs on the second floor are not handicap accessible. The main entrance has a ramp and wide enough doors for wheel chair access, but lacks push button wall switches and automatic door openers. Toilet configurations and accessories are inadequate and do not comply with all ADA accessibility guidelines. Interior graphics and/or signage for ADA compliance are inadequate or missing. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls that. The facility has a basement which contains boilers, other mechanical equipment, and electrical panel-board.

B. SHELL

The superstructure of the building is load bearing masonry walls with concrete floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow core metal steel doors. Roof construction is low-slope built-up roof. Roof covering was replaced in 1994.

C. INTERIORS

Interior partition walls typically include painted concrete masonry unit (CMU) with glazed block wainscot in the corridors and drywall. The interior doors are generally solid core wood doors with hollow metal frames, and are original from 1954. Interior fittings include chalk/tack boards, lockers, toilet accessories, handrails, and toilet partitions. The classrooms have original chalk boards. Toilet accessories such as the metal toilet partitions are original. The facility has original stair construction with concrete treads and risers and steel frame with rubber floor finish.

Interior wall finishes are typically painted CMU and painted gypsum drywalls. Floor finishes are typically vinyl asbestos tiles, vinyl composition tiles in the classrooms, cafeteria, and hallways, ceramic tiles in bathrooms, and carpet in the library and classrooms. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 24,300 square feet of vinyl asbestos tiles. The ceramic tiles are original. The VCT in the main office were replaced in 2007. The overall ceiling finishes are typically ACT and suspended acoustical tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 1,650 square feet of asbestos containing needlepoint ceiling tiles.

D. SERVICES**Conveying**

The building does not have an elevator for access to the second floor.

Plumbing

Fixtures, both toilets and sinks, are from June 2007. Domestic water piping was replaced in 2011. Sanitary waste line is cast iron. Storm drain water is directed from the building by way of internal and external drainage system. The sprinkler system only supplies the dry storage area and is inadequate for the building.

HVAC

Heating is provided from boilers that were replaced in 2011. HVAC upgrades were done in 2008. Individual rooms are conditioned by unit ventilators and temporary window units. The corridor has no ventilation. Controls throughout the building are pneumatic.

Facility Executive Summary

Electrical

A pole mounted transformer provides service to main switchgear. Power is copper. Most of the system is original. Lighting was updated in October 2007. Overall, lighting is provided by recessed fluorescent. The building does not have emergency power, emergency lighting, or an emergency generator. Exit signs are located at exterior doors and stairs and are illuminated.

Communication and Security

The system consists of audible annunciators and manual pull stations, but no smoke detectors. During the 2008 Assessment it was noted that telephone and data are combined at the jacks, but are not in their dedicated closets, and they do not have independent cooling systems as is required (the computer lab gets very hot, stresses the computer systems, and is in need of adequate cooling). The security system consists of motion sensors. Some fire extinguishers are not mounted properly.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves, but lacks computers. The building also includes fixed casework/cabinetry in the classrooms, window treatment and multiple seating furnishings (folding chairs and tables).

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on site where there are two handicap spaces out of total 53 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Current Repair Cost: \$5,508,531.23**Replacement Cost:** \$9,982,968.57**FCI:** 55.18%

General Information:

Function:	Elementary School
Gross Area:	46,559 S.F.

Year Built:**Last Renovation:****Facility Description:**

Fort Foote Elementary School is a one-story, 46,559 square foot facility located on a 12.2-acre site close to I-95 (Capital Beltway) and MD Route 210 (Indian Head Highway) in Fort Washington, MD. The original building was constructed in 1960 and additions were constructed in 1961 and 1968, with no major renovation. In 2011 some minor projects were performed that includes ceiling tiles and security system. Tech Fab Panels in the classrooms were replaced in 2011 and the distribution system is scheduled to be updated in 2013 with some minor projects that include asbestos abatement and lighting upgrade in the steam tunnels.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. There are no curb cuts for wheelchair access from the parking lot to the main entrance. The main entrance is original in design and is a barrier to the handicapped. Inside, the school is on equal grade and accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is load bearing masonry walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and Tech Fab Panels (replaced in 2011). Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving and toilet partitions. Interior wall finishes are typically painted CMU and tile. Floor finishes in common areas is typically ceramic tile and vinyl composition tile. Floor finishes in assignable spaces is typically vinyl tile. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 35,000 square feet of vinyl asbestos tiles. Ceiling finishes in common and assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original; with exception of the toilets. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is external with roof scuppers.

HVAC

Heating is provided by two #2 oil and natural gas-fired steam boilers that were installed in 2005 and supply low pressure steam to a steam/water heat exchanger that provides heating through a 2-pipe system with fin-tube radiators, fan-coil units and unit ventilators as terminal equipment. There is an air handler for the MPR that is heating and ventilating only. Cooling is supplied by individual room window package units that are approximately from 2004. There is a small split system serving the teacher prep room. Fresh air is supplied by infiltration and make-up air handling units. Roof mounted exhaust fans are installed in restrooms Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system. Distribution system is scheduled to be replaced in 2013.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to an 800 amp main panel. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted and pendent-mounted fluorescent. Emergency power (battery) and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system was replaced in 2008. The telephone and data systems are separate and include dedicated closets or cabinets. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where there is one out of 60 is a handicap space with paths to building entrances. Parking asphalt surface was re-done in 2006. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 6,000 gallon fuel oil tank of dual wall construction with level and leak detection systems installed in 2000.

Current Repair Cost: \$7,146,297.94**Replacement Cost:** \$13,130,230.41**FCI:** 54.43%

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$4,698,421 \$148,989	\$2,447,877 \$77,623	\$7,146,298 \$226,612	Necess ary- 2-5 Yrs	Capital Renewal	In most cases, exterior window systems are a single pane aluminum frame application that is from the original construction of the building. Some of the windows were replaced with a plexi-glass after they were damaged. It is recommended that the exterior window system be upgraded with a new weather tight application suitable to mimic the existing application.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$95,912	\$49,970	\$145,881	Necess ary- 2-5 Yrs	Capital Renewal	In most cases, exterior doors are from the original construction of the building. There are a few doors that have been replaced over the life of the school; however, no records were present during the time of the inspection to indicate the installation dates. In each case, the doors appear aged and abused. Removal and replacement of the exterior doors is recommended.
	C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$97,308	\$50,698	\$148,006	Necess ary- 2-5 Yrs	Capital Renewal	Interior doors are in fair condition considering the age of the applications. The doors are beyond their expected life cycle for this application and upgrades are recommended. ADA considerations for the upgrades should be included as part of this effort.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$141,074	\$73,499	\$214,573	Necess ary- 2-5 Yrs	Capital Renewal	There appears to have been a minor renovation to several of the classrooms to upgrade chalkboards and a section of lockers. The school's fittings are beyond their expected life cycle an are recommended for removal and upgrade.

General Information:

Function:	Elementary School
Gross Area:	45,648 S.F.

Year Built:**Last Renovation:****Facility Description:**

Fort Washington Elementary School is a single-story, 45,648 square foot facility located on an 8.1-acre site close to MD Route 210 (Indian Head Highway) in Fort Washington, MD. The original building was constructed in 1961 and additions were constructed in 1961, 1963, and 1969, with no major renovation since.

ACCESSIBILITY ISSUES

The building has some ADA compliant features including curb cuts and a ramp. Interior door hardware, restrooms, and fire detection systems are not ADA compliant. Further study by an ADA Specialist is required to ensure compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or a sub-floor construction.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is steel joist framing, with wood panels and lightweight fill. The roof was replaced in 2006. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are aluminum with aluminum frames. Roofing was replaced in 2006 and is typically low-slope, except at the cafeteria and kitchen area, where it is pitched with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU with glazed block wainscot in corridors. Interior doors are generally solid core with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. In the boiler room there are a few steps of painted concrete construction. The interior wall finishes are typically paint on CMU and glazed block. VAT flooring was replaced in 2008. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels in most areas and plaster in boiler room and restrooms. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 13,000 square feet of asbestos containing suspended acoustical panels.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow water closets which were installed in 2007. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is a combination of with roof drains, gutters, and downspouts. The building has sprinklers in the janitors closets only.

HVAC

Heating is provided by two steam dual fired boilers that supply fan coils, fin tube radiators, air handlers and terminal units throughout the building. Cooling is provided by individual window units. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to a main disconnect. Minor circuit additions have been installed to address the window air conditioner power, but most of the system is original. Lighting in the corridors and classrooms is fluorescent lamps. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Facility Executive Summary

Communication and Security

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets and do not have independent cooling systems. The security system consists of motion sensors. A CCTV system is present but is not operational.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where two out of 46 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer and electrical. The school has an 8,000 gallon underground fuel tank replaced in 1995.

Congressional	4
County Council	9
Historical Building	No
Legislative	25
Original Building	Built in 1970, 57,742 S.F.
School Board District	9
School Grade	PreK-5th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	57,742 S.F.	Last Renovation:

Facility Description:

Francis T. Evans Elementary School is a one-story, 57,742 square foot facility located on a 10-acre site close to MD Route 5 (Branch Avenue) in Clinton, MD, near Andrews Air Force Base. The building was constructed in 1970 and has had no additions constructed or major renovations performed. In 2010 the roof covering was replaced, and in 2011 the parking lot was improved to include a total of 100 parking spaces.

ACCESSIBILITY ISSUES

The main entrance doors are wide enough for wheel chair access. Toilet configurations and accessories are generally inadequate and do not comply with all the ADA accessibility guidelines. Interior graphics and/or signage for ADA compliance are inadequate and missing in the building. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade . The building does not have a basement or crawl space.

B. SHELL

The superstructure is masonry bearing walls, steel interior columns, and open web steel joist roof framing. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope, built-up roof (replaced in 2010) with standing seam metal parapet.

C. INTERIORS

Interior partition wall types typically include exposed brick, painted CMU, and drywall. Interior doors are generally hollow core wood or composite core fire doors with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving, handrails, and toilet partitions. Interior wall finishes are typically painted CMU and drywall. Floor finishes in common areas are typically carpet, vinyl composition tile, and ceramic tile. Floor finishes in assignable spaces are typically vinyl tile, carpet, and wood. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains approximately 18,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Sinks, faucets, urinals, toilets, and other plumbing fixtures were not updated and are mostly original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by an original gas hot water heater.

HVAC

Heating is provided by two original gas fired boilers. Cooling is supplied by a water cold chiller and roof top units. The chiller is located in the boiler room. The heating/cooling distribution system is ductwork and a 2-pipe system using air handlers and unit ventilators. Fresh air is supplied by infiltration and air handling units. Most of the air handling units are original. Ceiling exhaust fans are in restrooms. Controls and instrumentation are pneumatic not centrally controlled by an energy management system.

Fire Protection

The building has 5% fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency power and lighting are not present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces, was installed in 1998. The system is activated by pull stations and is centrally monitored. The telephone and data systems are combined and include dedicated closets or cabinets. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, detention, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where was updated to 100 parking spaces in 2011. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school does not have a fuel oil tank; it uses natural gas.

D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$34,068	\$17,749	\$51,817	Necessary- 2-5 Yrs	Deferred Maintenance	Piping for both the hot and cold water is mostly original. The distribution system was not updated and needs update. Some of the faucets had low pressure that could indicate line blockage.
D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$36,955	\$19,253	\$56,208	Necessary- 2-5 Yrs	Deferred Maintenance	
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$51,968	\$27,075	\$79,043	Necessary- 2-5 Yrs	Deferred Maintenance	Drainage is slow in some of the sink drains and when flushing toilets. This indicates that the sanitary waste system needs update and repairs.
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$1,544,021	\$804,435	\$2,348,456	Necessary- 2-5 Yrs	Deferred Maintenance	Most of the terminal units are original and show signs of damage. Some of the roof top units break down often and have control problems.
D3020	Heat Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$342,987	\$178,696	\$521,684	Necessary- 2-5 Yrs	Deferred Maintenance	The boilers are original and show signs of wear. The school engineer stated work was performed on the boilers but more work is needed.
D3030	Cooling Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$282,358	\$147,109	\$429,467	Necessary- 2-5 Yrs	Deferred Maintenance	The chiller is original, but is still functioning. According to the life cycle of this chiller, the system needs replacement.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$627,656	\$327,009	\$954,664	Necessary- 2-5 Yrs	Deferred Maintenance	The heating and cooling distribution system, piping, pumps, ductwork, and fittings, appear to be in poor condition with some of leaks and damage
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$57,165	\$29,783	\$86,947	Necessary- 2-5 Yrs	Deferred Maintenance	HVAC control system is original and has functional problems. Some classrooms get too hot in winter and some get no heat. In the summer, some rooms are too cold or too hot.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$46,194	\$24,067	\$70,260	Necessary- 2-5 Yrs	Deferred Maintenance	Since most of the HVAC system is original, some system balance and testing is needed. Ventilation balance is poor in some classrooms and in some hallways.
C3020410	Wood	System	Beyond Useful Life	Renew System	1	Ea.	\$6,630	\$3,454	\$10,084	Necessary- 2-5 Yrs	Deferred Maintenance

General Information:

Function:	Elementary School	Year Built:
Gross Area:	42,416 S.F.	Last Renovation:

Facility Description:

Gaywood Elementary School is a one-story, 42,416 square foot facility located on a 8.3-acre site close to MD Route 564 and I-95 (Capital Beltway) in Seabrook, MD. The original building was constructed in 1958 and additions were constructed in 1961 and 1966, with no major renovation since. The HVAC distribution system is schedule to be replaced in 2013.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The ramp to the main entrance needs to be upgraded and exterior and interior doors are not handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is load bearing stud walls. Floor construction is slab on grade. Roof construction consists of concrete beams with steel joists and Tectum roof deck panels with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU and glass blocks. Exterior windows are aluminum sash with operable single-pane glazing. Roofing is typically low-slope with built-up roof, which was replaced approximately in 1998.

C. INTERIORS

Interior partition walls are typically painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, shelving, handrails and toilet partitions. Interior wall finishes are typically paint, tile, and glazed block. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, carpet, and vinyl asbestos tile. Floor finishes in assignable spaces are typically concrete, carpet, vinyl composition tile, and vinyl asbestos tile. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 33,100 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels and exposed deck. Ceiling finishes in assignable areas are typically roof deck. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 1,760 square feet of suspended acoustical panels.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets, which were installed around 2007. Domestic water distribution is original and consists of copper and galvanized piping. Hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers that supply fan coil units, fin tube radiators and terminal units throughout the building. Cooling is provided by individual window units for each classroom. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units, and pneumatic. The system is not centrally monitored or controlled. Distribution system is scheduled to be replaced in 2013.

Electrical

A pole mounted transformer provides service to a main disconnect. Minor circuit additions have been installed to address the window air conditioner power, but most of the system is original. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors and is inadequate.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where four out of 57 are handicap spaces with path to building entrance. Asphalt re-surface was done in 2007. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, electrical and an underground fuel tank.

Current Repair Cost: \$7,193,952.97**Replacement Cost:** \$11,960,469.68**FCI:** 60.15%

Facility Description:

Gladys Noon Spellman Elementary School is a two-story, 59,500 square foot facility located on a 5.9-acre site close to MD Route 295 (Baltimore-Washington Parkway) and US Route 50 in Cheverly, MD. The original building was constructed in 1955 and additions were constructed in 1970 and 1990, with major renovation performed in 1990. In 2012 the chillers and a kitchen grease trap were replaced.

ACCESSIBILITY ISSUES

Access to this building is provided by ramp from the parking area. Parking is limited and is at an elevation that requires additional effort to reach the sidewalk. Access to the main entrance is limited as well as the interior signage, restrooms, drinking fountains and door hardware. The facility is generally not in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor construction.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer. Exterior windows are aluminum sash with fixed single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically pitched with standing seam metal.

C. INTERIORS

Interior construction partition wall types typically include painted CMU. Interior doors are generally solid core with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories and shelving. Interior wall finishes are typically painted CMU and generally. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces is typically vinyl tile. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building includes hydraulic elevator.

Plumbing

Fixtures are original except for the low flow water closets, which were installed in 2007. Domestic water distribution is primarily copper. Sanitary waste system is cast iron. Rain water system is external with roof gutters and downspouts.

HVAC

Heating is provided by two dual fuel steam boilers to fan coils, air handlers and terminal units. Cooling is supplied by two air cooled chillers (replaced in 2012) to air handlers, fan coil units, and terminal units. Fresh air is supplied by a make-up air unit and through ducts to the fan coil units. Ceiling-mounted exhaust fans are installed in bathrooms. Controls and instrumentation are a combination of manual, electric, and pneumatic, and were upgraded in 2008.

Fire Protection

The building has a fire sprinkler system.

Electrical

The electrical service is fed a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting was upgraded in 2007 to T-8 lamps. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

Facility Executive Summary

The fire alarm system consists of audible annunciators in common spaces and interior corridors. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are combined but do not include dedicated closets or cabinets. The building includes an internal security system that consists of motion detectors and is centrally monitored.

Other Electrical Systems

The building has an emergency generator that, as of the 2008 Assessment, was inoperative.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The building also includes fixed casework, window treatment furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where four out of 50 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon underground fuel oil tank replaced in 1991.

Current Repair Cost: \$5,450,364.02**Replacement Cost:** \$15,966,516.84**FCI:** 34.14%

General Information:

Function:	Elementary School
Gross Area:	35,928 S.F.

Year Built:**Last Renovation:****Facility Description:**

Glassmanor Elementary School is a one-story, 35,928 square foot facility located on a 3.7-acre site close to Route 210 (Indian Head Highway) in Oxon Hill, MD. The original building was constructed in 1960 and multiple additions were constructed in 1965, 1969, and 1994, with no major renovation. In 2012 some minor projects were performed that included security updates, and in 2013 the roof is scheduled for replacement.

ACCESSIBILITY ISSUES

The main entrance has a ramp and wide enough doors for wheel chair access, but lacks push button wall switches and automatic door openers and ADA compliant graphics and/or signage. Handicap accessible toilet stalls are present in the gang restrooms. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade that. The building does not have a basement, cellar, or sub-floor, but does have a crawl space.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with fixed and operable frames, solid core wood doors, and hollow metal steel doors. The single pane metal cased windows throughout the original building, 1965 addition, and 1969 addition are original. The seven classrooms added in the 1965 and 1969 additions have fire exit windows. Most of the classrooms do not have exterior doors, with exception of two kindergarten classrooms added in 1969 (K-6 and K-7 classrooms). The hollow metal steel exterior doors in the cafeteria, hallways, and main entrance are original. Roof construction is low-slope, built-up roof with gravel ballast and flashing. The roof was completely replaced in 1994 and is scheduled for replacement in 2013.

C. INTERIORS

Interior partition wall types typically include painted CMU with glazed block wainscot in the corridors. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. Most of the classrooms have original chalkboards. The metal toilet partitions were replaced in 2002.

Interior wall finishes are typically painted CMU walls. Floor finishes throughout the building are typically vinyl asbestos tiles (VAT), ceramic tiles, VAT, and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 26,750 square feet of vinyl asbestos tiles. The VAT in classrooms 17 and 18 of the original building were replaced with VCT tiles in 2007. The overall ceiling finishes in the original building are typically perforated acoustical tiles that were spray painted. The ceiling finishes in the rest of the school are suspended perforated acoustical tiles (drop ceiling).

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are mostly original. Domestic water distribution is mostly copper. Sanitary waste system is cast iron. Rain water system is internal and external (at canopies).

HVAC

Heating is provided by two gas-fired boilers, which were installed in 1994. Cooling is supplied by rooftop package units, which were installed 2006, along with window units. The heating/cooling distribution system is a ductwork system using fan coil units and radiators in classrooms. Fresh air is supplied by infiltration and air handling units in the cafeteria. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and digital for the new model, and are not centrally controlled by an energy management system.

Facility Executive Summary

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors, and in the 2008 Assessment were deemed in poor condition.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting and branch wiring is typically serving recessed and surface-mounted fluorescent and incandescent lights (10%). Emergency power is missing, but emergency lighting is present in corridors and at exit signs, exits doors, and near stairways, and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe. The audible system in the existing building is in the interior corridors. The strobe annunciators are in the new model building. The system is activated by pull stations and is centrally monitored. The telephone and data systems are combined per classrooms and include dedicated closets or cabinets. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library and theater, stage equipment, food service equipment and a kitchen grease trap. The library has shelves, tables and chairs. The school does not have a nurse's room. The stage in the multi-purpose room has lights and curtains that are original. The school has no science labs. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in the cafeteria.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are two reserved handicap spaces out of a total of 37 parking spaces. Drainage is generally adequate and is handled by surface discharge. The site includes concrete sidewalks adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school facility has outside storage space. Underground fuel tank was replaced in 1993.

Current Repair Cost: \$6,106,108.04**Replacement Cost:** \$9,893,283.40**FCI:** 61.72%

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$19,344	\$10,078	\$29,423	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet in some classrooms in the original building and in the 1965 and 1969 additions is beyond useful life and in poor condition (stained and worn).
C3030	Ceiling Finishes	System	Beyond Useful Life	Renew System	1	Ea.	\$201,814	\$105,145	\$306,959	Necess ary- 2-5 Yrs	Deferred Maintena nce	Ceiling finishes throughout the facility are beyond useful life and in fair condition. The drop ceilings in the 1994 addition are warped.
G2020	Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$57,121	\$29,760	\$86,881	Necess ary- 2-5 Yrs	Deferred Maintena nce	Asphalt surface parking is available on-site and is in fair condition with cracks and pot holes.
C3020410	VAT (Resilient Flooring)	System	Beyond Useful Life	Renew System	1	Ea.	\$586,556	\$305,596	\$892,151	Necess ary- 2-5 Yrs	Deferred Maintena nce	The VAT floor finish in cafeteria, hallways, and classrooms of the original building, 1965 addition, and 1969 addition are beyond useful life and in fair to poor condition, with worn finishes and cracks.
D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$225,595	\$117,535	\$343,130	Necess ary- 2-5 Yrs	Deferred Maintena nce	Plumbing fixtures are mostly original and need update. Some toilets and urinals flush valves were updated while most sinks, faucets, drinking fountains, and other plumbing fixtures were not updated. Some were covered with plastic bags to prevent students from using them. Some sinks are chipped, cracked, and have rust. Some faucets are slow and broken.
D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$19,924	\$10,381	\$30,305	Necess ary- 2-5 Yrs	Deferred Maintena nce	Domestic water distribution is copper and is in poor condition due to aging. Some pipes are rusted.
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$28,601	\$14,901	\$43,502	Necess ary- 2-5 Yrs	Deferred Maintena nce	Sanitary piping is beyond useful life, outdated and in some areas is clogged and others leaking.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$346,105	\$180,321	\$526,425	Necess ary- 2-5 Yrs	Deferred Maintena nce	The heating/cooling distribution system is a ductwork and 2-pipe system using fan coil units (in classrooms) and radiators in hallways, which are in fair to poor condition.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$31,493	\$16,408	\$47,901	Necess ary- 2-5 Yrs	Deferred Maintena nce	The controls and instrumentation are pneumatic in the original building and the 1969 addition. The controls are digital in the 1994 addition.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$26,673	\$13,897	\$40,569	Necess ary- 2-5 Yrs	Deferred Maintena nce	The building does not have balancing system. Window units are directly controlled and the roof-top units are individually controlled by digital units.
D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$108,941	\$56,758	\$165,699	Necess ary- 2-5 Yrs	Complian ce	The building does not have a fire sprinkler system.
G2030	Pedestrian Paving	System	Beyond Useful Life	Renew System	1	Ea.	\$32,713	\$17,043	\$49,756	Necess ary- 2-5 Yrs	Deferred Maintena nce

General Information:

Function: Elementary School

Gross Area: 52,061 S.F.

Year Built:**Last Renovation:****Facility Description:**

Glenarden Woods Elementary School is a one-story, 52,061 square foot facility located on a 12.6-acre site close to I-95 (Capital Beltway) and MD Route 704 in Glenarden, MD. The original building was constructed in 1960 and additions were constructed in 1964 and 1968, with no major renovations since. In 2008 the underground fuel tank was replaced, in 2009 the boiler and roof covering was replaced, and in 2012 the kitchen grease trap was replaced. A major renovation and addition project is currently in design for this school with construction from 2015 to 2017.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The ramp to the main entrance appears to lack adequate width and slope and exterior doors and restrooms appear to not be handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are predominantly steel sash with operable single-pane glazing. Exterior doors are aluminum. Roofing is typically low-slope with built-up roof. The entire roof was replaced in 2009.

C. INTERIORS

Interior partition wall types typically include painted CMU and a few movable wall partitions. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, shelving, handrails, and toilet partitions. Interior wall finishes are typically paint, moveable wall, and tile. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, carpet and vinyl asbestos tiles. Floor finishes in assignable spaces is typically vinyl tile, carpet, vinyl composition tile, and vinyl asbestos tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 21,900 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical tiles that. Ceiling finishes in assignable areas are typically plaster and suspended acoustical tiles.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers (replaced in 2009) that supply fan coil units, fin tube radiators, and terminal units throughout the building. Cooling is provided by thirty one cooling-only roof mounted package units. Fresh air is supplied by the roof top units. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pole mounted transformer provides service to a main disconnect. Minor circuit additions have been installed to address the air conditioner power, but most of the system is original. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The building also includes fixed casework furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where two out of 49 are handicap spaces with paths to building entrances. Asphalt re-surfaces was done in 2007. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, electrical and underground fuel tank replaced in 2008.

Current Repair Cost: \$9,625,478.88**Replacement Cost:** \$14,680,566.17**FCI:** 65.57%

School Board District	4
School Grade	K-6th

General Information:

Function:	Elementary School
Gross Area:	44,644 S.F.

Year Built:**Last Renovation:****Facility Description:**

Glenn Dale Elementary School is a partial two-story, 44,644 square foot facility located on a 11.2-acre site close to MD Route 193 and US Route 50 in Glenn Dale, MD. A one-room school house was originally built on site in 1898 and was razed and replaced with a two-room plus school in 1928. Additions were constructed in 1952, 1964, 1967, and 2000. In 2010 some minor projects were performed that included exterior painting, re-caulk of windows, and glass replacement as needed. In 2012 the kitchen grease trap was replaced. The parking lot is currently being programmed for improvements in 2013 that includes increasing the number of parking spaces to a total of 69.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The lower main entrance appears to be handicap accessible. However, the upper classrooms of the 1928 building are not handicapped accessible.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade, concrete footings and foundation walls. The building has a basement and sub-floor of cast in place and CMU construction.

B. SHELL

The superstructure is concrete block frame. Floor construction is slab on grade, concrete slab, and some wood. Roof construction is metal pan with lightweight fill, and some wood. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are a mixture of wood (in original building), aluminum and steel sash with operable single-pane or thermo pane glazing. Exterior doors are hollow metal steel or solid core wood. Roofing is pitched and low-slope with built-up and standing seam metal roofing.

C. INTERIORS

Interior partition wall types typically include painted CMU. One of the additions was originally constructed as "open classroom" and is now converted using drywall partitions. Interior doors are generally solid core wood doors and some hollow metal doors with hollow metal and some wood frames. Interior fittings include chalk and tack boards toilet accessories, shelving, handrails and toilet partitions. Stair construction includes steel risers and treads with tile finishes. The interior wall finishes are typically painted CMU, plaster, drywall, and some glazed tile. Floor finishes in assignable spaces are typically vinyl tile and carpet. Common area flooring is VCT and some wood (in original section). Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original, except toilets were replaced in 2007. Domestic water distribution is a mixture of copper and galvanized. Sanitary waste system is a mixture of cast iron and plastic in both the original building and additions. Rain water system is a mixture of internal and external with roof drains and scuppers.

HVAC

Facility Executive Summary

Heating is provided by two boilers that were installed in 1971. Each of the boilers is dual fired, natural gas and #2 fuel oil. The 2000 addition has rooftop package units. Cooling is supplied by window units and rooftop package units. The heating/cooling distribution system is a mixture of ductwork and 2-pipe system using fan coil units, baseboard radiators, and unit ventilators. Fresh air is supplied by infiltration and window units. Ceiling-mounted exhaust fans are installed in restrooms and ventilation is deemed (2008 Assessment) inadequate. Controls and instrumentation are pneumatic in the original building and digital in the 2000 addition and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Standpipes, fire extinguishers, and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution from branch panel wiring is typically copper. The switchgear was replaced in 1993. Lighting and branch wiring is typically serving a mixture of recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Illumination was mostly replaced in 2007. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in the 2000 addition and audible annunciators in the original building and older additions, and is located in common spaces and interior corridors. The system is activated by pull stations and/or smoke detectors and is not centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are inadequately secured and cooled. The building includes an internal security system that is actuated by infrared and optical devices and is not centrally monitored.

Other Electrical Systems

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, media center, theater and stage, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The building also includes fixed casework, window treatment, and furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where it is scheduled to be improved with a total of 69 parking spaces in 2013. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system. Underground fuel tank was installed in 1999.

General Information:

Function:	Elementary School
Gross Area:	109,197 S.F.

Year Built:**Last Renovation:****Facility Description:**

Glenridge Elementary School is two-story, 109,197 square foot facility located 14.8-acre site close to MD Route 295 (Baltimore-Washington Parkway) and US Route 50 in Landover Hills, MD. The original building was constructed in 1954 with additions constructed in 1955, 1963, and 1965, with no major renovations. In 2009 some minor projects were performed that included interior and exterior painting, re-caulk of windows, and glass replacement as needed. In 2012 the kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The facility is not in compliance with ADA requirements. However further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, door hardware, interior signage, restrooms, and drinking fountains.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building does have a crawl space construction of poured in place concrete.

B. SHELL

The superstructure is reinforced concrete masonry with face brick. Floor construction is slab on grade. Roof construction is a built up roof system on concrete. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Roofing is low-slope built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and glazed block. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, and toilet partitions. Stair construction includes concrete risers and treads with tile finishes. Interior wall finishes are typically painted CMU and glazed block. Floor finishes in common areas are typically ceramic tile, vinyl asbestos tile, carpet, and wood (stage floor). Floor finishes in assignable spaces are typically vinyl asbestos tiles, terrazzo, and carpet. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are suspended acoustical panels.

D. SERVICES**Conveying**

The building does not have conveying system.

Plumbing

Sinks, faucets, and other plumbing fixtures were not updated, while some urinals and most toilets were. Most of the water fountains are original. Domestic water distribution is mostly galvanized. Sanitary waste system is cast iron. As of the 2008 Assessment it was noted that drainage is slow in some of the restrooms and sinks. Rain water system is internal with roof drains. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided by two oil/gas fired boilers. Cooling is supplied by mostly window units and two roof top units. The heating/cooling distribution system is ductwork and air handlers. Fresh air is supplied by infiltration and air handlers. Ceiling exhaust fans are in restrooms. Controls and instrumentation are direct dials for cooling, window units, and pneumatic for heating and is not centrally controlled by an energy management system. Most of the thermostats were not operating adequately at the time of the 2008 Assessment.

Fire Protection

The building does not have a fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Most of the switch gear was updated in 2005. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Illumination was updated in 2007. Emergency power is not present as of the 2008 Assessment, but a new generator was on site at the time of the visit in 2008. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobes annunciators in common spaces and interior corridors. The system is activated by pull stations and heat sensors and is not centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator waiting to be installed at the time of the Assessment in 2008.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap was replaced in 2012. The building also includes fixed casework, window treatment, and floor grilles and mats.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking spaces available on-site where two out of the 73 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon fuel oil tank of dual wall construction replaced in 1991.

Current Repair Cost: \$18,562,007.93**Replacement Cost:** \$30,791,348.29**FCI:** 60.28%

School Addition 1	Built in 1993, 4,076 S.F.
School Board District	5
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	36,825 S.F.

Year Built:
Last Renovation:

Facility Description:

Heather Hills Elementary School is a two-story, 36,825 square foot facility located on a two-acre site close to US Route 50, US Route 301, and MD Route 97 in Bowie, MD. The original building was constructed in 1967 and an addition was constructed in 1993 (four modules), with no major renovations. The underground fuel tank was replaced in 2012.

ACCESSIBILITY ISSUES

The facility is two stories with no elevators or chair lifts. The programs on the second story are therefore not handicap accessible. Path to the main entrance has curb cuts and main entrance doors are wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Exterior doors have panic hardware. Handicap toilet stalls are available in only one unisex restroom in the 1993 addition. There are no handicap toilet stalls in the original building. Interior graphics and/or signage are missing or inadequate and do not comply with ADA requirements (only parking areas have handicap signs). Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on the slab on grade. The building does not have a basement or crawl space. The building has a boiler room pit (sub-floor) of cast-in-place concrete construction.

B. SHELL

The superstructure of the facility is load bearing masonry walls. Roof construction is metal pan with lightweight fill, resting on open web steel joist roof framing. The exterior enclosure is brick veneer over CMU. The exterior windows in the original building are typically aluminum sash with operable single-pane glazing. The exterior doors in the original building are hollow metal steel. The facility has low-slope built up roof with gravel ballast on the original building. The built-up roof was replaced in 2006. The modular classrooms have single-ply membrane roof.

C. INTERIORS

Interior partition walls typically include painted CMU with glazed block wainscot in corridors and multi-purpose room. Interior doors, including fire doors, are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The steel stairs (with steel risers/treads and vinyl tile floor finishes) are original. The metal ladder to access the roof hatch is original.

The interior wall finishes are typically painted CMU with plaster on some walls in the institutional space (first floor). The paint finish is around 1999. Floor finishes throughout the building are typically vinyl asbestos tiles (VAT), vinyl composition tiles (VCT), carpet, and ceramic tiles. The VAT floor finishes in corridors and classrooms of the original building. Some of the VAT tiles in the original building were replaced with VCT tiles in 2005. The carpet in the administrative offices and media center is from around 2008, whereas carpet in the kindergarten classrooms is around 1993. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 26,500 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended acoustical tiles and drywall. Most of the fissured ceilings in the corridors and classrooms have been replaced in 2005 and some of them were replaced again in 2007, due to damage from the roof. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 20,100 square feet of asbestos containing fissured ceiling tiles and 425 square feet of fissured ceiling tiles.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Fixtures are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas-fired hot water heater with a separate storage tank, which was installed in 1998.

HVAC

Facility Executive Summary

Heating is provided by two gas/oil fired steam boilers. There are heat pumps serving the 1993 addition for HVAC. Cooling is supplied by window units and a roof-top unit that serves the MPR. The heating distribution system is a 2-pipe system using fin tube radiators and unit ventilators. Fresh air is supplied by unit ventilators and air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic, and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to an original (1966 model) main panel. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent with some incandescent. Emergency power and lighting are battery powered and exit signs are present at exit doors and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors, etc. The system is activated by pull stations and/or smoke detectors, and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there is one reserved handicap space out of total about 35 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The facility has an 8,000 gallon underground fuel oil tank replaced in 2012.

Facility Executive Summary

Facility: \Elementary Schools\Henry G. Ferguson (Accokeek Academy)**Address:** 14600 Berry Road, Accokeek, MD 20607**Attributes:**

School Area	2
Congressional	5
County Council	9
Historical Building	No
Legislative	27A
Original Building	Built in 2013, 67,538 S.F.
School Board District	9
School Grade	PreK-5th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	67,538 S.F.	Last Renovation:

Facility Description:

The new Henry G. Ferguson School replaces the original building that will be constructed adjacent to the Eugene Burroughs Middle School on the Accokeek Academy campus located on a 10-acre site close to MD Route 210 (Indian Head Highway) in Accokeek, MD . After completion in 2013 the original building will be demolished. The new 67,538 S.F. two-story facility has been designed to achieve LEED Gold (LEED for Schools rating).

The cost model for this school is based on the available design drawings and planned construction.

Current Repair Cost: \$0.00 **Replacement Cost:** \$19,009,066.91 **FCI:** 0.00%

Facility Description:

High Bridge Elementary School is a single-story, 54,643 square foot facility located on a 9.9-acre site close to I-495 (Capital Beltway) in Bowie, MD. The original building was constructed in 1962 and additions were constructed in 1966 and 1974, with no major renovations. In 2010 some minor projects were performed that included exterior painting, and in 2012 the security system and kitchen grease trap were replaced.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The access ramp to the main entrance appears to be adequate, but the main entrance door hardware needs improvement to make it handicap accessible. There are only two restrooms that appear to be handicap accessible. All interior door hardware also needs to be improved. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU and architectural precast concrete panels around windows. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are aluminum. Roofing, which was replaced in 1996, is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and drywall in the addition. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving, handrails, and toilet partitions. Interior wall finishes are typically painted CMU and drywall, ceramic tile, and glazed blocks. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, vinyl asbestos tiles, and carpet. Floor finishes in assignable spaces is typically vinyl tile, carpet, and vinyl asbestos tiles. During the 2008 Assessment in the A.H.E.R.A. Management Plan Report, the school contains 36,750 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical tile and exposed deck in restrooms. Ceiling finishes in assignable areas are typically plaster, suspended needlepoint tile, and suspended acoustical panels. During the 2008 Assessment in the A.H.E.R.A. Management Plan Report, the school contains 160 square feet of asbestos board ceilings.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is a combination of internal roof drains, gutters, and down spouts. The building does not have a sprinkler system, except in janitors closets.

HVAC

Heating is provided by two steam dual fired boilers that supply ceiling mounted fan coil units, fin tube radiators, and terminal units throughout the building. The boilers were repaired in 2007, but are original. Cooling is provided a combination of two air cooled chillers, two package units, and a split system, all mounted on the roof. Distribution is a 2-pipe system to fan coil units. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

Facility Executive Summary

A pad mounted transformer provides service to two disconnects. The distribution system was regraded in 2008. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building has an oil fired emergency generator.

Communication and Security

The system consists of audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. Equipment and Furnishings

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The building also includes fixed casework, floor grilles and mats, and furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Parking is available on-site where two out of 79 are handicap spaces with paths to building entrances. Parking striping and asphalt surfaces were resurfaced in 2007. Drainage is generally handled by surface drainage. The site includes concrete sidewalks, site lighting and utility lines; water, sewer and electrical. The school has an 8,000 gallon underground fuel oil storage tank that was replaced in 2007.

Facility Description:

Highland Park Elementary School is a two-story, 61,555 square foot facility located on a 10.5-acre site close to MD Route 704 in Landover, MD. The original building was constructed in 1928 and additions were constructed in 1952, 1958, 1963, 1965, and 1999. Major renovation was performed in 1973 (additions one through four), 1994 (original building), and 1999. In 2012 some minor project was performed that included network infrastructure.

ACCESSIBILITY ISSUES

The building has curbs cuts, ramps, accessible restrooms and door hardware and appears to be in compliance with ADA requirements. Further study by an ADA Specialist is required to ensure full compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The head start building has a basement of CMU construction. The elementary school building does not have a basement.

B. SHELL

The superstructure is a steel frame structure. Floor construction is slab on grade. Roof construction for the head start building is a pitched timber structure and wood panels, whereas the elementary school building has metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope (elementary school building) with built-up roof. The roofing on the head start building is pitched with shingle roof covering.

C. INTERIORS

Interior partition wall types typically include painted CMU (elementary school) and drywall (head start). Interior doors are generally solid core/hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, and toilet partitions. Stair construction includes concrete risers and treads with tile finishes. The interior wall finishes are typically drywall, tile, wood, and paint. Floor finishes in common areas are typically ceramic tile, vinyl composition tile and carpet. Floor finishes in assignable spaces is typically carpet and ceramic tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels and plaster.

D. SERVICES**Conveying**

The building has a hydraulic elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper piping. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building has standpipe and sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers that supply air handlers, fan coil units, and fin tube radiators. Cooling is provided by two roof mounted, air cooled water chillers. Distribution is a four pipe system to air handlers and fan coil units. Fresh air is supplied by the air handlers. Ductwork is rectangular metal duct with rigid insulation. Controls are a combination of pneumatic and DDC. The system is not centrally monitored or controlled.

Electrical

Facility Executive Summary

A pad mounted transformer provides service to a main disconnect. Most of the distribution system is original. Lighting is recessed fluorescent fixtures with T-8 fluorescent lamps and electronic ballasts. Exit signs are properly placed and illuminated. The building has an emergency generator that is inoperative as of the 2008 Assessment.

Communication and Security

The system consists of visual / audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are combined in a single closet but do not have independent cooling system. The security system consists of motion sensors and a CCTV system.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Parking is available on site where four out of 70 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site include concrete sidewalks, site lighting and utility lines including water, sewer and electrical.

Current Repair Cost: \$3,381,393.97**Replacement Cost:** \$16,473,346.08**FCI:** 20.53%

Facility Executive Summary

Facility: \Elementary Schools\Highland Park Elementary_Head Start Building

Attributes:

None

General Information:

Function: Elementary School

Year Built: 1928

Gross Area: 9,234 S.F.

Last Renovation: 1994

Facility Description:

Current Repair Cost: \$1,272,789.59

Replacement Cost: \$2,603,962.18

FCI: 48.88%

Facility Description:

Hillcrest Heights Elementary School is a two-story, 70,800 square foot facility located on an 18.5-acre site close to I-495 (Capital Beltway) and MD Route 5 in Temple Hills, MD. The original building was constructed in 1952 and an addition was constructed and major renovation was performed in 1999. In 2012 some minor project work was performed that included network infrastructure.

ACCESSIBILITY ISSUES

Programs on the second floor are handicap accessible via an elevator. The main entrance has a ramp and doors wide enough for wheel chair access. Handicap toilet stalls with metal hand rails are available in the gang restrooms and classroom restrooms on both floors. Toilet configurations and accessories are adequate. Interior graphics and/or signage for ADA compliance are inadequate or missing. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The facility building typically rests on a slab-on-grade. The facility does not have a basement, sub-floor, or crawl space.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow core metal steel doors. The exterior metal windows were replaced in 1999. The exterior metal doors in the buildings were replaced in 1999. Roof construction is low-slope built-up roof with stone ballast that was replaced in 2000.

C. INTERIORS

The interior partition walls typically include painted concrete masonry unit (CMU) with glazed block wainscot in the corridors and drywall. Interior doors are generally hollow core wood doors with hollow metal frames that were replaced in 1999. Interior fire doors have one and a half hour fire rating. Interior fittings include chalk/tack boards, shelving, toilet accessories, handrails, and toilet partitions. Toilet accessories, such as metal toilet partitions, were replaced in 1999. Metal hand rails are available in the gang restrooms and classroom restrooms on both floors. The facility has two stairs with concrete treads and risers and steel frames that are original and also a ladder to access the roof.

Interior wall finishes are typically painted CMU and drywall. Floor finishes are typically terrazzo in the corridor, stone tiles, and vinyl composition tiles in the classrooms, and ceramic tiles in restrooms and kitchen. The terrazzo flooring and stone flooring are original. The vinyl composition tiles were installed in 1999. The ceramic tiles are original. The overall ceiling finishes are typically suspended acoustical tiles. The acoustical tiles were installed in 1999. The corridors have skylights.

D. SERVICES**Conveying**

The building has a hydraulic elevator.

Plumbing

Toilet fixtures have been replaced, but other fixtures have not. Domestic water distribution is copper. Domestic hot water is provided by two gas fired hot water heaters. Sanitary waste system is cast iron. Rain water system is internal with roof drains.

HVAC

Heating is provided a combination of two oil/gas fired boilers and by six rooftop gas fired package units. Cooling is supplied by water cooled chillers. The heating/cooling distribution system is a combination of 2-pipe hydronics and ductwork system using unit ventilators. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are digital and are centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution from branch panel wiring is typically copper. Lighting and branch wiring is typically serving recessed fluorescents lighting. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators that are located in interior corridors. The system is activated by pull stations and some smoke detectors, and is centrally monitored. The telephone and data systems are combined and include dedicated closets or cabinets that are adequately secured. The building includes an internal security system that is actuated by contact, is centrally monitored.

Other Electrical Systems

The building has a diesel emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes audio-visual, library, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework/cabinetry, window treatment, and multiple seating furnishings. There are wood cabinets and sinks in the classrooms.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on site where there are four handicap spaces out of total 55 parking spaces. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. Underground tank was replaced in 1995.

Current Repair Cost: \$8,717,035.70**Replacement Cost:** \$19,515,522.93**FCI:** 44.67%

General Information:

Function:	Elementary School
Gross Area:	40,500 S.F.

Year Built:	
Last Renovation:	

Facility Description:

Hollywood Elementary School is a one-story, 40,500 square foot facility located on an 8.7-acre site close to I-95/I-495 (Capital Beltway) in College Park, MD. The original building was constructed in 1952 and two additions were constructed in 1954 and 1978, with no major renovation performed. The underground fuel tank was replaced in 2012.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The facility does not contain compliant toilet facilities, signage or graphics.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement.

B. SHELL

The superstructure is concrete (CMU) frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors and frames are hollow metal steel. Roofing is typically flat with built-up roof that was installed in 2007, and standing seam-sloped roof on the original building.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. The interior wall finishes are typically painted CMU. Floor finishes in common areas are typically terrazzo, vinyl composition tile, and carpet. Floor finishes in assignable spaces is typically vinyl tile and carpet. During the 2008 assessment in the A.H.E.R.A. Management Plan Report, the school contains 14,035 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. Domestic water distribution is a mixture of copper and galvanized steel. Sanitary waste system is mostly cast iron with limited areas of plastic. Rain water system is a mixture of internal and external roof drains and scuppers. The roof was replaced in 1999 and Sixty percent of the roof drains and scuppers were also replaced.

HVAC

Heating is provided by two Peerless boilers that are original and are dual fired capability of #2 fuel oil and natural gas. Cooling is supplied by widow units and rooftop units. The heating/cooling distribution system is a mixture of ductwork and 2-pipe, using a mixture of air handlers, radiators and unit ventilators. Fresh air is supplied by infiltration. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution from branch panel wiring is typically copper. Branch wiring is typically serving a mixture of recessed, surface-mounted, and pendent-mounted fluorescent and incandescent light fixtures. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Facility Executive Summary

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors that were full updated in 2007. The system is activated by pull stations and smoke detectors and is centrally monitored. The telephone and data systems are combined and include dedicated closets or cabinets. The building does not include an internal security system.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment and food service equipment. The building also includes fixed casework, window treatment, and furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where two out of 55 are handicap spaces with path to the building entrance. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic and an underground fuel tank replaced in 2012. Water supply is provided from the municipal system.

Current Repair Cost: \$5,813,061.68**Replacement Cost:** \$11,245,216.54**FCI:** 51.69%

Facility: \Elementary Schools\Hollywood Elementary_Original Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems													
D3060		Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$3,821,868 \$40,500	\$1,991,193 \$21,100	\$5,813,062 \$61,600	Necess ary- 2-5 Yrs	Deferred Maintena nce	HVAC control system is not functioning properly. Some classrooms get too hot in winter and some get no heat.
D3070		Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$31,995	\$16,669	\$48,664	Necess ary- 2-5 Yrs	Deferred Maintena nce	HVAC control system is not functioning properly. Some classrooms get too hot in winter and some get no heat. In the summer, some rooms are too cold or too hot.
D4010		Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$164,430	\$85,668	\$250,098	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5010120		New Main Line	System	Beyond Useful Life	Renew System	1	Ea.	\$52,245	\$27,220	\$79,465	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5010240		Main Panel	System	Beyond Useful Life	Renew System	1	Ea.	\$34,425	\$17,935	\$52,360	Critical / Immediate Need	Deferred Maintena nce	Water main is located above the electrical supply and main panel. Water has leaked before and rusted out the parts of transformer and panels. A resolution is needed ASAP.
D5090		Other Electrical Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$4,455	\$2,321	\$6,776	Necess ary- 2-5 Yrs	Deferred Maintena nce	
E1020		Institutional Equipment	System	Beyond Useful Life	Renew System	1	Ea.	\$79,380	\$41,357	\$120,737	Necess ary- 2-5 Yrs	Deferred Maintena nce	Classroom casework in poor condition.
G2020		Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$88,921	\$46,328	\$135,249	Necess ary- 2-5 Yrs	Deferred Maintena nce	Re-surfacing and re-stripping required.
G2030		Pedestrian Paving	System	Beyond Useful Life	Renew System	1	Ea.	\$24,410	\$12,718	\$37,128	Necess ary- 2-5 Yrs	Deferred Maintena nce	The concrete sidewalks are in poor condition, beyond useful life and cracked.
G3060110		Pumps	System	Beyond Useful Life	Renew System	1	Ea.	\$37,863	\$19,727	\$57,590	Necess ary- 2-5 Yrs	Deferred Maintena nce	The pumps appear to be outdated and have some leaks.
G3060110		Propane Tank	System	Beyond Useful Life	Renew System	1	Ea.	\$4,305	\$2,243	\$6,547	Necess ary- 2-5 Yrs	Deferred Maintena nce	
B2020		Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$127,170	\$66,256	\$193,426	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior windows are steel sash with operable single-pane glazing in poor condition and beyond useful life.
B2030		Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$81,000	\$42,201	\$123,201	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior doors/hardware beyond useful life.
C1010126		Drywall Partitions/Metal Stud Framing	System	Beyond Useful Life	Renew System	1	Ea.	\$23,200	\$12,087	\$35,287	Necess ary- 2-5 Yrs	Deferred Maintena nce	Drywall partitions need repairs or replacement due to wear/age

Facility: \Elementary Schools\Hyattsville Elementary

Address: 5311 43rd Avenue, Hyattsville, MD 20781

Attributes:

School Area	2
Congressional	5
County Council	2
Historical Building	No
Legislative	22
Original Building	Built in 1935, 13,261 S.F.
School Addition 1	Built in 1962, 6,629 S.F.
School Addition 2	Built in 1979, 30,455 S.F.
School Board District	3
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	50,345 S.F.

Year Built:

Last Renovation:

Facility Description:

Hyattsville Elementary School is a two-story, 50,345 square foot facility located on a 2.1-acre site close to MD Route 295 in Hyattsville, MD. The original building was constructed in 1935 and additions were constructed in 1962 and 1979, with no major renovations performed. Minor renovations, including an interior upgrade, were performed in 2006. In 2012 some minor projects were performed that included replacement of CFC controls, a walk-in freezer, and dishwasher and a/c modernization. In 2012 there was a POD conversion of 14,490 S.F. into classrooms and the parking lot was improved.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The main entrance to this building is on grade; however, other secondary entrances are on a steep grade or have stairs that limit access. A further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include ramp access, door hardware, interior signage, restrooms, and drinking fountains.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building has a sub-floor of CMU construction.

B. SHELL

The superstructure is load bearing masonry walls and steel framed construction. Floor construction is slab on grade and metal pan with lightweight fill. Roof construction is metal pan with lightweight fill and wood. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel that appear to have been upgraded in the late 1970's. Roofing is typically flat or low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU, prefabricated wall dividers, and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, and toilet partitions. Stair construction includes concrete risers and treads with steel finishes. The interior wall finishes are typically painted CMU and drywall. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces are typically vinyl tile and carpet. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels that.

D. SERVICES

Conveying

There is one hydraulic elevator, which was installed in 1978 located in Addition 2. The elevator was last inspected on June 20, 2007.

Plumbing

Plumbing fixtures in the entire school include flush valve water closets, which were installed in 1979.

HVAC

The school has two boilers, which were installed in 2002. Each of the boilers uses natural gas as primary fuel and oil as alternate fuel. The system is a 2-pipe distribution system with respective air handling units throughout the school. Air conditioning is provided to the entire facility by one McQuay water cooled chiller, which was installed in 1979. The heat is discharged through a roof mounted cooling tower, which was installed in 1989.

Fire Protection

The entire school is fully sprinkled with piping is exposed in the classrooms.

Electrical

Facility Executive Summary

The incoming electrical service is supplied by a utility-owned pad mount transformer that powers the MDP, located in the original building, which was installed in 1979. Lighting is primarily fluorescent throughout the school. The gym (original building) has surface mounted fluorescent fixtures with wire guards and T8 lamps. The fixtures throughout the school have had a complete change to T8 lamps and electronic ballasts under a system wide program.

Communications and Security

The main fire alarm system is a non-addressable, 9-zone, which was installed in 1978. There are audible and strobe signal devices in the corridors. There is a centrally monitored security system, intercom, and phone/data systems.

Other Electrical Systems

The building has an emergency generator, oil fired (surface tank), estimated 1979.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment and food service equipment. The building also includes fixed casework and general furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where it was improved in 2012 with 24 parking spaces. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The water supply is provided from the campus distribution system. Underground fuel tank was replaced in 2002.

Original Building	Built in 1974, 60,507 S.F.
School Board District	8
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	60,507 S.F.

Year Built:
Last Renovation:

Facility Description:

Indian Queen Elementary School is a one-story, 60,507 square foot facility located on a 10.2-acre site close to Route 210 (Indian Head Highway) and Interstate 495 (Capital Beltway) in Fort Washington, MD. The original building was constructed in 1974 and no additions have been constructed and no major renovations have been performed since that time. In 2008 the underground fuel tank was replaced, and in 2012 chillers were replaced.

ACCESSIBILITY ISSUES

Access to this facility from the general parking area is facilitated by a curb cut. The interior of the facility has no elevation changes and no barriers. However, this facility was constructed prior to any consideration for the physically challenged. The interior signage, door hardware, restrooms, and drinking fountains are not current with the ADA requirements, and the facility is not generally in compliance with ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame and load bearing masonry walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of a unique CMU exterior finish with a rough texture. There are no exterior windows. Exterior doors are hollow metal steel. Roofing is typically flat with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors and composite fire doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, toilet partitions. Interior wall finishes are typically painted CMU. Floor finishes in common areas is typically vinyl composition tile. Floor finishes in assignable spaces is typically carpet. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Fixtures were entirely replaced in 2007. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal/external combination with roof drains and scuppers. Domestic hot water is provided by a gas-fired hot water heater and a separate hot water storage tank that was replaced in 1999.

HVAC

Heating is provided by two original steam boilers and provide heated water (hydronic) through a steam to hot water heat exchanger with nine forced air penthouse (rooftop) air handlers. Cooling is supplied by two reciprocating compressor water cooled units (replaced in 2012) through the same nine air handlers. The heating/cooling distribution system is a ductwork with 4-pipe system using air handlers, and some fan coil units. Fresh air is supplied by the air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to an original main panel. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common and assignable spaces. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and include dedicated closets or cabinets. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. The building's unique design and use limits the use of fixed amenities such as casework, window treatment, floor grilles and mats, or fixed multiple seating. This is due to the fact that there are no windows or closed classrooms with fixed applications. The schools amenities are mobile and can be moved to support different educational needs as the school requires.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where two out of 68 are handicap spaces with a path to the building entrance. Drainage is generally handled by area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 10,000 gallon underground fuel oil tank replaced in 2008.

Current Repair Cost: \$9,120,214.03**Replacement Cost:** \$16,186,193.38**FCI:** 56.35%

Fittings are from original construction. Universal upgrades are recommended due to age and condition.

Facility Executive Summary

Facility: \Elementary Schools\J. Frank Dent Elementary
Address: 2700 Corning Avenue, Fort Washington, MD 20744

Attributes:

School Area	2
Congressional	4
County Council	8
Historical Building	No
Legislative	26
Original Building	Built in 1970, 34,700 S.F.
School Addition 1	Built in 1997, 4,536 S.F.
School Board District	8
School Grade	PreK-6th

General Information:

Function: Elementary School
Gross Area: 39,236 S.F.

Year Built:
Last Renovation:

Facility Description:

J. Frank Dent Elementary School is a one-story, 39,236 square foot facility located on a 10-acre site close to Route 210 (Indian Head Highway) and Interstate 495 (Capital Beltway) in Fort Washington, MD. The original building was constructed in 1970 and an addition was constructed in 1997, with no major renovation. A POD conversion of 13,050 S.F. into classrooms is currently being programmed for a 2013 construction completion.

ACCESSIBILITY ISSUES

Access to this building is provided by curb ramp access from the parking area. Parking is limited based on non-compliant signage and location of the handicap parking spaces. Sidewalk paths only provide access to the main entrance. There are several sections where doors lead to sections of grass, which would limit wheelchair movement. Once in the main lobby, classrooms are generally accessible, while the addition of signage, door hardware, dual level drinking fountains and restroom amenities would enhance the current applications for ADA compliance. This facility was designed and constructed prior to any consideration for the physically challenged and is generally not in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame and load bearing masonry walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat with built-up roof replaced in 2002.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving and toilet partitions. The interior wall finishes are typically painted CMU. Floor finishes in common areas is typically vinyl composition tile that was reported to have been installed in the late 1990s. Floor finishes in assignable spaces is typically vinyl tile. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 28,100 of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES
Conveying

The building does not include conveying equipment.

Plumbing

Fixtures are original with some of the toilets being replaced around 2007. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains.

HVAC

Heating is provided by two original steam boilers that are natural gas and #2 oil-fired with an underground fuel-oil storage tank of current configuration and monitoring wells. The boilers supply steam to a steam to hot water heat exchanger which pumps hot water to fan-coil units, unit ventilators, and fin-tube radiators and make-up and roof mounted air handlers. The office/administration area has a small split system and the 1997 addition has a stand alone HVAC ducted system. The heating distribution system is a 2-pipe system. There is no central cooling equipment; classrooms are provided with window units. Fresh air is supplied by infiltration. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

Facility Executive Summary

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel that was upgraded and replaced in 2005. Power distribution from branch panel wiring is typically copper. Lighting and branch wiring is typically serving surface-mounted and pendent-mounted fluorescent. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and is centrally monitored. The system was upgraded several times, with the latest in 1996. The telephone and data systems are separate and include dedicated closets or cabinets that are inadequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. The building does include fixed window treatments.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where two out of 66 are handicap spaces with a path to the building entrance. Drainage is generally handled by surface area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 10,000 gallon fuel oil tank of dual wall construction with level and leak detection systems.

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\J. Frank Dent Elementary_Original Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$3,388,077 \$109,999	\$1,765,188 \$57,309	\$5,153,266 \$167,308	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior windows are original and beyond the expected life cycle for this type of application. The windows are recommended to be replaced with weather tight applications within the next five years.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$70,441	\$36,700	\$107,141	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior doors are from the original construction in most cases. Several of the doors are damaged. A universal upgrade is recommended within the next five years.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$104,100	\$54,236	\$158,336	Recom mended -3-10 Yrs	Deferred Maintena nce	The fittings are original to the building's construction. Although most fittings appear to be adequate for this application, there are several classrooms that will require upgrade to maintain a universal standard and appearance. Fittings upgrades are required school wide within the next ten years.
	D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$290,092	\$151,138	\$441,230	Necess ary- 2-5 Yrs	Deferred Maintena nce	Some fixtures are new. Replace remaining original fixtures.
	D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$20,473	\$10,666	\$31,139	Necess ary- 2-5 Yrs	Deferred Maintena nce

eCOMET Facility Report Facility Executive Summary

Report Date: 08 Sep 2012

D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$142,964	\$74,484	\$217,448	Necess ary- 2-5 Yrs	Deferred Maintena nce	Parking surfaces are generally in fair condition. There are some potholes in the main lot. The service lot is relatively small and additional space is required to support the needs of the school. A parking redesign and universal upgrades are required. ADA requirements should be considered as part of this effort. The addition of compliant parking areas as well as proper signage should be included in this project. The main entrance has a covered concrete sidewalk system that provides access from the bus area to the entrance. The remaining section of the school has scattered sidewalk systems that are not complete for a successful path around the school. Additional sidewalk applications are recommended to enclose the school with proper access paths to each exterior door.
D5030	Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$80,851	\$42,123	\$122,974	Necess ary- 2-5 Yrs	Deferred Maintena nce

Last Renovation:

Facility Description:

James H. Harrison Elementary School is a one-story, 56,925 square foot facility located on a 10-acre site close to I-295 (Baltimore-Washington Parkway) in Laurel, MD. The original building was constructed in 1969, with no additions constructed or major renovations performed since that time. In 2008 food service equipment was installed/replaced. In 2012 the kitchen grease trap and roof coverings were replaced and some minor updates were made to the security system. The exterior doors and storefront are currently being scheduled for replacement in 2013.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, door hardware, interior signage, and drinking fountains.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade with concrete footings and foundation walls. The building has a crawl space of cast in place concrete construction.

B. SHELL

The superstructure is concrete reinforced masonry with face brick, load bearing CMU, and glazed block wainscot. Floor construction is slab on grade. Roof construction is metal pan and insulation boards with a built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Window is aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames schedule for replacement in 2013 including storefront. Interior doors are solid core wood doors with hollow metal frames, without fire labels. Roofing is typically low-slope with built-up roof replaced in 2012.

C. INTERIORS

Interior partition wall types typically include painted CMU with a glazed block wainscot. There are metal stud and drywall partitions in the classrooms at the rear of the building. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, and toilet partitions. The interior wall finishes are typically CMU and glazed block wainscot. Interior painting was re-done in 2005. Floor finishes in common areas are typically VCT, carpet, ceramic tile, and wood (stage floor). Floor finishes in assignable spaces are typically carpet, VCT, and quarry tile in the kitchen. Ceiling finishes in common areas are typically suspended acoustical tiles. Ceiling finishes in assignable areas are typically suspended acoustical tiles.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

The plumbing fixtures are primarily American Standard with flush valve water closets. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas fired hot water generator, storage tank and re-circulating pump.

HVAC

Heating is provided by two Spencer gas and oil-fired hot water boilers. Cooling is supplied by package rooftop units of varying ages. Classroom units A&B are cooling only units. Classroom units C&D are one each (C&D) heating and cooling. The heating distribution system is a 2-pipe system to unit ventilators in classroom units A&B, to the rooftop units in C&D and to two suspended air handling, heat only units in the gym. Ceiling-mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are pneumatic, and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system except in storage rooms only. Fire extinguishers are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted utility transformer that delivers power to a main switch and distribution switchboard. Power distribution wiring is typically copper. Lighting is typically fluorescent lay-in fixtures, plus recessed box units in the corridors and box plus surface fluorescent fixtures in the classrooms. The lighting is primarily original to the building's construction. The exterior parking and roadway lighting consists of bracket mounted luminaires on steel poles and square concrete bases. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible devices in common spaces, interior corridors, etc. The fire alarm control panel is a non-addressable system, which is probably original to the building's construction. The system is activated by pull stations and smoke detectors. The telephone and data systems are separate and do not include dedicated closets or cabinets. The space containing the server rack is not separately air conditioned. The building includes an internal security system that is actuated by optical or combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction rooms.

G. SITE

Surface parking spaces available on-site where two out of 67 are handicap spaces with paths to the building entrances. Drainage is generally adequate and is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon fuel oil tank, which was installed in 2007.

School Board District	4
School Grade	PreK-6th
Study - Energy	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	53,162 S.F.

Year Built:
Last Renovation:

Facility Description:

James McHenry Elementary School is a one-story, 53,162 square foot facility located on a 13.2-acre site close to I-95 (Capital Beltway) and US Route 50 in Lanham, MD. The original building was constructed in 1964 and additions were constructed in 1965, 1970, and 1997, with no major renovation. The underground fuel tank was replaced in 2008.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU and pre-cast architectural panels around exterior windows. Exterior windows were replaced in 1996. Exterior doors are hollow metal steel. Roofing was replaced in 1998.

C. INTERIORS

Interior partition wall types typically include painted CMU. The 1997 addition has painted CMU and drywall. Interior doors are generally solid core with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving, and toilet partitions. The interior wall finishes are typically drywall (in the 1997 addition), tile, and glazed blocks. Floor finishes in common areas is typically ceramic tile, carpet and vinyl asbestos tiles. Floor finishes in assignable spaces is typically vinyl asbestos tiles and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 35,200 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels and plaster. Ceiling finishes in assignable areas are typically plaster and exposed deck. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 200 square feet of asbestos-containing, drilled ceiling tile.

D. SERVICES
Conveying

The building has a chair lift located in the new wing.

Plumbing

Fixtures are original, except for the low flow toilets, which were installed in 2007. Domestic water distribution is original and consists of copper and galvanized piping. Hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by a combination of two steam dual fired boilers that supply fan coil units, fin tube radiators throughout the building, and roof mounted gas and electric package units. Cooling is provided roof mounted package units and individual window units. Fresh air is supplied by the roof top units. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pole mounted transformer provides service. Minor circuit additions have been installed to address the air conditioner power, but most of the system is original. Lighting has been upgraded with electronic ballasts and T-8 lamps. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Facility Executive Summary

Communication and Security

The system consists of audible annunciators, manual pull stations, and heat/smoke detectors. Kitchen range hood lacks a fire suppression system. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surfaces parking is available on-site where two out of 49 are handicap spaces with paths to the building. Drainage is generally handled by surface drainage. The site includes concrete sidewalks, site lighting and utility lines, including water, sewer and electrical. The underground fuel tank was replaced in 2008.

Facility Executive Summary

Facility: \Elementary Schools\James McHenry Elementary\1997 Addition

Attributes:

None

General Information:

Function: Elementary School

Year Built: 1997

Gross Area: 7,258 S.F.

Last Renovation:

Facility Description:

Current Repair Cost: \$462,358.17

Replacement Cost: \$1,876,689.61

FCI: 24.64%

General Information:

Function: Elementary School

Gross Area: 70,891 S.F.

Year Built:**Last Renovation:****Facility Description:**

James R. Randall Elementary School is a one-story, 70,891 square foot facility located on a 10.1-acre site close to Freeway MD 5 in Clinton, MD. The original building was constructed in 1964 and additions were constructed in 1967, 1978, and 1990, with no major renovation. In 2010 the gymnasium flooring was replaced. In 2012 some ADA upgrades were made.

ACCESSIBILITY ISSUES

The main entrance to the building is not handicap accessible because the doors are not wide enough for wheelchairs or walkers. Handicap students, staff, and visitors typically enter the building through the cafeteria, which has a wide enough door, but does not have a push button wall switch and automatic door opener. Only one door to the building has a push button wall switch and automatic door opener for handicap access. Limited handicap egress is a safety hazard. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade foundation. The building has an accessible crawl space of CMU construction.

B. SHELL

The superstructure is masonry bearing walls with brick exterior and interior CMU walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof and single ply membrane replaced in 1998.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed block wainscot in the corridors, and drywall. Interior doors are generally solid core wood doors and composite core fire doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, and shelving, toilet accessories, toilet partitions and handrails. There are no stairs in the building. The interior wall finishes are typically painted CMU and drywall. Floor finishes in common areas are typically vinyl asbestos tile. Floor finishes in assignable spaces are typically vinyl asbestos tile and carpet. Gym flooring was replaced in 2010. During the 2008 Assessment it was noted in the A.H.E.R.A Management Plan Report, the school contains 43,100 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels, drywall, and plaster.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Most of urinals and toilets were installed in 2007. Sinks, faucets, and other plumbing fixtures were not updated at that time. Most of the water fountains are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is a combination of internal and external with roof drains. Domestic hot water is provided by gas hot water heater located in the boiler room.

HVAC

Heating is provided by two gas-fired boilers. Cooling is supplied by approximately 70% of window units and 30% roof top units. The window units were installed at various times in the past. The rooftop units were installed in 1995. The heating/cooling distribution system is a mix of ductwork and 2-pipe system using fan coil units, air handlers and unit ventilators. The heating and cooling distribution system, piping, pumps, ductwork, and fittings, are mostly original. Fresh air is supplied by infiltration and air handling units. Ceiling-mounted exhaust fans are installed in bathrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system. Most of the HVAC system is original.

Facility Executive Summary

Fire Protection

The building has approximately 60% fire sprinkler original system installed. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors, installed 2005.

Electrical

The electrical service is fed from a pole mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are inadequately secured and cooled. The building does not include an internal security system.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where four out of 38 paved parking spaces are reserved for handicap parking. Drainage is generally handled by area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic, especially in the rear of the building. Underground fuel tank was installed in 2000.

Current Repair Cost: \$10,380,516.97**Replacement Cost:** \$19,558,738.66**FCI:** 53.07%

School Board District	6
School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	49,779 S.F.	Last Renovation:

Facility Description:

The John H. Bayne Elementary School is a two-story, 49,779 square foot facility located on a 4-acre site in Capitol Heights, MD. The original building was constructed in 1963 and additions were constructed in 1970 and 1991, with a major renovation done in 2006. In 2012 a kitchen grease trap was installed.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The building's construction was prior to any consideration for the physically challenged. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is load bearing masonry walls. Floor construction is slab on grade and metal pan with lightweight fill. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer. Exterior windows are aluminum sash with fixed and operable single-pane and double pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU or exposed brick finish. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails and toilet partitions. Stair construction includes steel risers and treads with rubber finishes. The interior wall finishes are typically painted CMU or exposed brick finish. Floor finishes in common areas are typically vinyl composition tile and carpet. Floor finishes in assignable spaces is typically vinyl tile. Ceiling finishes in common areas and assignable areas are typically suspended acoustical tile.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. The 1991 addition, however, has handicap toilet facilities in each classroom. Domestic water distribution is copper and galvanized steel. Sanitary waste system is cast iron. There is a sewage ejector system in the addition building. Rain water system is a combination of roof drains and scuppers. Domestic hot water is provided by a gas-fired hot water heater with separate storage and re-circulator, which was installed in 1998.

HVAC

Heating is provided by two gas/oil fired steam boilers, which were installed in 2007. Cooling is supplied by individual room window units. The heating distribution system is a 2-pipe, (steam and condensate) system using fan coil units, fin tube radiators, and unit ventilators. Fresh air is supplied by air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel, which was installed in 2004. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically 3-wire grounded serving recessed, surface-mounted and pendent-mounted fluorescent and some incandescent. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Facility Executive Summary

Communications and Security

The fire alarm system consists of audible/lighted annunciators in common spaces, interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap installed in 2012. The building also includes fixed window treatment furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where one out of 50 is a handicap space with a path to building entrance. Drainage is generally handled by area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon underground fuel oil tank reportedly of dual wall construction with level and leak detection systems installed in 1990.

School Board District	8
School Grade	PreK-8th

General Information:

Function:	Elementary School
Gross Area:	110,413 S.F.

Year Built:
Last Renovation:

Facility Description:

John Hanson Alternative School is a two-story, 110,413 square foot facility located on a 16.1-acre site close to Interstate 295 and Interstate 495 (Capital Beltway) in Oxon Hill, MD. The original building was constructed in 1956 and additions were constructed in 1965 and 1966, with no major renovation. Some minor projects were performed that included replacement of the gymnasium flooring in 2011 and repair/replacement of bleachers in 2012; the gymnasium windows are scheduled for replacement in 2013.

ACCESSIBILITY ISSUES

The facility has a ramp to the main entrance. However, interior door hardware and the fire alarm system are not ADA compliant. The facility also lacks handicap accessible restrooms and drinking fountains, and does not have an elevator. Further study by an ADA Specialist is required to ensure compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane. Exterior doors are hollow metal steel with hollow metal frames. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core/hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, and toilet partitions. Stair construction includes concrete risers and treads with terrazzo finishes. Interior wall finishes are typically plaster, tile, and glazed CMU. Floor finishes in common areas are typically terrazzo, ceramic tile, and vinyl asbestos tile. Floor finishes in assignable spaces are typically vinyl asbestos tile, carpet, and wood. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan, the school contains 77,900 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster, suspended acoustical panels.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a new gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is a combination of internal roof drains with gutters and downspouts in some areas. The building has sprinklers in the janitors closets only.

HVAC

Heating is provided by two new steam dual fired boilers that supply fin tube radiators and terminal units throughout the building. Cooling is provided by individual window units for each classroom and roof mounted cooling only package units for the media center and main office. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to a 1500 amp main disconnect. Minor circuit additions have been installed to address the window air conditioner power, but most of the system is original. Some panels include screw-in glass fuses. Lighting has been upgraded with T-8 lamps and electronic ballasts. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Facility Executive Summary

Communication and Security

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors and CCTV system.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where four out of 75 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines, including water, sewer, and electrical. The school has an 8,000 gallon underground fuel oil tank with level and leak detection systems, which was installed in 2004.

Current Repair Cost: \$21,692,772.68**Replacement Cost:** \$31,135,807.21**FCI:** 69.67%

General Information:

Function: Elementary School
Gross Area: 58,323 S.F.

Year Built:
Last Renovation:

Facility Description:

Kenilworth Elementary School is a two-story, 58,323 square foot facility located on a 13.2-acre site close to MD Route 50 in Bowie, MD. The original building was constructed in 1963 and an addition was constructed in 1967, with no major renovation done.

ACCESSIBILITY ISSUES

The main entrance has ramps, curb cuts, and is wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap stalls are available in the gang restrooms on both first and second floors. The toilet configurations and accessories are adequate. Interior graphics and/or signage are inadequate or missing in some portions of the building and do not comply with ADA requirements. All the programs in the facility are handicap accessible, but programs on second story are accessible only with one chair lift. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on the concrete footings and foundation walls. The building does not have a basement, but does have crawl spaces.

B. SHELL

The superstructure is load bearing masonry walls. The roof construction is metal pan with lightweight fill and is resting on open web steel joist roof framing. The exterior enclosure is brick veneer over CMU with fireproof wall panels. The exterior windows in the facility are aluminum sash with operable single-pane glazing. Fire exit windows are available in all the classrooms. Most of the classrooms in the 1967 addition also have exterior doors. The exterior doors are hollow metal steel doors. The facility has low-slope, built up roof with gravel ballast. The built-up roof was replaced in 2007.

C. INTERIORS

The interior partition walls typically include painted CMU and folding metal partitions (in two classrooms). The interior doors, including fire doors with no fire ratings, are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original black-boards. The building has steel stairs to access the second floor.

The interior wall finishes are typically painted CMU and folding metal partitions in two classrooms. The floor finishes throughout the building are typically vinyl composition tiles (VCT), vinyl asbestos tiles (VAT), carpet, and ceramic tiles. The VAT floor finish is in corridors, multipurpose room, kitchen, and several classrooms on both first and second floors. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 55,000 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended metal pan ceiling, vinyl faced ceiling and plaster ceiling. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 18,000 square feet of asbestos-containing ceiling tiles.

D. SERVICES**Conveying**

The two-story facility does not have an elevator, but does have one chair lift.

Plumbing

Fixtures are original. The toilets (with flush valves) were replaced throughout the original building in 2007. Other plumbing fixtures such as urinals and sinks are original. Domestic water distribution is copper and galvanized steel. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater, which was installed in 1993. There is an internal heat exchanger in the hot water storage.

HVAC

Heating is provided by two original Boilers, which were installed in 1967. Cooling is supplied by window units, and by gas-fired and rooftop units in the addition. The heating distribution system is 2-pipe, radiant system using air handlers, fan coil units, and fin tube radiators. Fresh air is supplied by air handling units. Roof-mounted exhaust fans are installed in bathrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Facility Executive Summary

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to switchgear with disconnect, which was added in 2000 for the window A/C unit service. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent with some incandescent. Emergency battery power and lighting and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves and furniture, such as tables and chairs. The nurse's room has two beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in the cafeteria.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are three reserved handicap spaces out of total about 63 parking spaces. The parking lot was resurfaced and curbs / parking surface were striped around 2006. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic and underground fuel tank installed in 1994.

Original Building	Built in 1966, 42,559 S.F.
School Addition 1	Built in 1969, 1,438 S.F.
School Board District	4
School Grade	PreK-5th

General Information:

Function:	Elementary School
Gross Area:	43,997 S.F.

Year Built:**Last Renovation:****Facility Description:**

Kenmoor Elementary School is a one-story, 43,997 square foot facility located on a 9-acre site close to MD Route 295 (Baltimore-Washington Parkway) and US Route 50 in Landover, MD. The original building was constructed in 1966 and an addition was constructed in 1969, with no major renovation. In 2012 some minor projects were performed including ADA upgrades, security upgrades, installation of a kitchen grease trap, and some structural projects.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The entrance ramp lacks change of color and texture, the main entrance door threshold is an impediment to wheelchairs, and interior door hardware needs to be upgraded. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are aluminum. Roofing is typically low-slope with built-up roof, which was replaced in 2006.

C. INTERIORS

Interior partition wall types typically painted CMU. Interior doors are generally solid core with hollow metal frames. Interior fittings include chalk and tack boards, shelving and toilet partitions. Interior wall finishes are typically painted CMU, tile, and glazed block. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, vinyl asbestos tiles, and carpet. Floor finishes in assignable spaces is typically vinyl tile, vinyl asbestos tiles, and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 40,570 square feet of vinyl asbestos tiles. Ceiling finishes in common and assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets, which were installed around 2008. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is combination of internal roof drains and scuppers. The building does not have a sprinkler system except for individual heads in janitor closets.

HVAC

Heating is provided by two steam dual fired boilers that supply fin tube radiators and terminal units throughout the building. Cooling is provided by individual window units for each classroom and offices. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to a main disconnect. Most of the distribution system is original. Lighting has been upgraded. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of visual/audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where two out of 47 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, and electrical. Underground fuel tank with leak detection and level indicator was installed in 2006.

Current Repair Cost: \$7,765,613.59**Replacement Cost:** \$12,091,521.32**FCI:** 64.22%

Facility Executive Summary**Facility:** \Elementary Schools\Kettering Elementary**Address:** 11000 Layton Street, Upper Marlboro, MD 20772**Attributes:**

School Area	1
Congressional	4
County Council	6
Historical Building	No
Legislative	25
Original Building	Built in 1969, 50,376 S.F.
School Addition 1	Built in 1998, 7,275 S.F.
School Board District	6
School Grade	PreK-5th

General Information:

Function: Elementary School
Gross Area: 57,651 S.F.

Year Built:
Last Renovation:

Facility Description:

Kettering Elementary School is located on a 10-acre site outside the I-495 beltway in Upper Marlboro, MD. The one-story, 57,651 square foot facility was originally constructed in 1969, with an addition constructed in 1998. Parking was improved in 2012. A POD conversion of 13,545 S.F. into 12 classrooms is currently being programmed for a 2013 construction completion.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and doors are wide enough for wheel chair access but lack push button wall switches and automatic door openers. The school has an exterior ramp that facilitates access to the 1998 addition. A handicap toilet stall is available in only one gang restroom (near the 1998-addition). Toilet configurations and accessories are inadequate. Interior graphics and/or signage for ADA compliance are inadequate and missing in some portions of the building (parking lot has handicap signs). All programs in this one-story facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on the slab-on-grade. The building does not have a basement or the crawl spaces.

B. SHELL

The superstructure is load bearing masonry walls. Roof construction is metal pan with lightweight fill and is resting on open web steel joist roof framing. The exterior enclosure is brick veneer over CMU. The exterior windows in the original building are aluminum sash with operable single-pane glazing. The exterior windows in the 1998 addition are double pane windows. Fire exit windows are available in all classrooms. Some of the classrooms (especially primaries) also have an exterior door. The exterior doors in the original building are hollow metal steel doors. A very few exterior doors have been replaced in the past, for example in the boiler room. The facility has low-slope built up roof with gravel ballast. The built-up roof over the original building was replaced in 2002.

C. INTERIORS

Interior partition walls typically include CMU, gypsum drywalls, and folding metal partition walls. Interior doors (including fire doors with no fire ratings) are generally solid core wood doors with metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original black-boards. The metal toilet partitions are original. The facility does not have stair construction.

Interior wall finishes are typically painted CMU and gypsum drywalls. The paint was redone in 2008. Floor finishes throughout the building are typically vinyl composition tiles (VCT), vinyl asbestos tiles (VAT), carpet, and ceramic tiles. The overall ceiling finishes are typically suspended acoustical tiles and sheetrock drop-in ceiling in the kitchen, stage, restrooms and in the boiler room. The fissured ceiling tiles in all other classroom and corridors in the original building are original.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original except for the low flow toilets installed around 2008. Domestic water distribution is original and consists of copper and galvanized. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system except in janitors closets.

HVAC

Heating is provided by two steam dual fired boilers (replaced in 2007) that supply air handlers, fan coil units, fin tube radiators, and terminal units throughout the building. Cooling is provided a new air cooled chiller to the mezzanine air handlers. Distribution is a 2-pipe system, with metal duct from the air handlers to the spaces. Heating and cooling for the 1998 addition is provided by roof mounted gas fired package units. Fresh air is supplied by fan coil units and air handlers. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Facility Executive Summary

Electrical

A pole mounted transformer provides service to a main disconnect. Minor additions were done for the air condition system, but most of the distribution system is original. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

The system consists of visual/audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves and furniture such as tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment and multiple seating furnishings (folding chairs and tables) in the cafeteria.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where it was improved in 2012 with 129 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting, utility lines and an underground fuel tank. Pedestrian and vehicular traffic is separated.

Current Repair Cost: \$8,201,779.92**Replacement Cost:** \$15,857,807.29**FCI:** 51.72%

General Information:

Function:	Elementary School
Gross Area:	53,247 S.F.

Year Built:
Last Renovation:

Facility Description:

Lamont Elementary School is a one-story, 53,247 square foot facility located on a 9.8-acre site close to I-495 (Capital Beltway) in New Carrollton, MD. The original building was constructed in 1964 and an addition was added in 1966 with no major renovation. In 2008 some minor projects were performed that included interior painting, and in 2012 a kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and ramps and is wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap toilet stalls are available in the gang restrooms. Toilet configurations and accessories are inadequate. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements. All the programs in the facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, but does have a crawl space.

B. SHELL

The superstructure of the facility is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single panel metal windows with operable frames, and hollow metal steel doors. The metal windows throughout the building are original. The windows are single-pane glazing. All the classrooms in the original building have a fire window exit. All the classrooms in the 1966 addition have exterior doors. The original building has low-slope, built up roof with gravel ballast. The built-up roof was replaced in 2004.

C. INTERIORS

Interior partition walls typically include painted CMU with glazed block wainscot in the corridors and drywall in temporary buildings. The paint on some partition walls is peeling as of the 2008 Assessment. The interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards. Metal toilet partitions are original. The facility has no stair construction. There is a metal ladder to access the roof hatch.

Interior wall finishes are typically painted CMU and metal folding partitions. Interior painting was redone in 2008. Floor finishes throughout the building are typically vinyl composition tiles (VCT), vinyl asbestos tiles (VAT), carpet, and ceramic tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 45,000 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended acoustical tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 875 square feet of asbestos-containing fissured pattern (pinhole) acoustical tiles.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Toilets, including flush valves, were partially replaced (60%) throughout the building in 2006. Sinks and urinals are original. Domestic water distribution is copper and original to the building. Sanitary waste system is cast iron. Rain water system is combination with roof drains.

HVAC

Heating is provided by two gas/oil-fired boilers. Cooling is supplied by water cooled chillers. The heating/cooling distribution system is ductwork and 2-pipe system using unit ventilators and fin-tube radiators. Fresh air is supplied by air handling units. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Facility Executive Summary

Fire Protection

The building does not have a fire sprinkler system, except in the boiler room and dry storage. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pole mounted transformer that delivers power to a main panel. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed fluorescents. Lighting has been updated to T8s. Classroom lights are automated. Emergency power and lighting are not present, but exit signs are present at exit doors and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors and. The system is activated by pull stations and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact devices and is centrally monitored; there are no security cameras.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap installed in 2012. The library has shelves and furniture, such as tables and chairs. The nurse's room has two beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are four reserved handicap spaces out of a total of 62 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Current Repair Cost: \$9,626,352.96**Replacement Cost:** \$14,053,741.72**FCI:** 68.50%

eCOMET Facility Report

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Lamont Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems B2020		Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$6,328,963 \$169,325	\$3,297,390 \$88,219	\$9,626,353 \$257,544	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior windows are original and beyond useful life, with reported leaks. The windows have a thick coat of paint on them making it difficult to open and close. The flashing and caulking around the windows are in fair condition, but are beyond useful life. The single pane windows are not energy efficient.
	C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$103,299	\$53,819	\$157,118	Necess ary- 2-5 Yrs	Deferred Maintena nce	The interior doors are in fair to poor condition, with chipped corners and worn surface finishes. The interior doors (including fire doors) are beyond useful life and need refinishing. The door hardware is in fair to poor condition (hard to lock and unlock).
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$157,079	\$81,838	\$238,917	Necess ary- 2-5 Yrs	Deferred Maintena nce	Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards which are beyond useful life and in fair condition. Metal toilet partitions are original, rusted, stained, and in poor condition. All of the old toilet accessories are beyond useful life and need to be replaced.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$228,430	\$119,012	\$347,441	Necess ary- 2-5 Yrs	Deferred Maintena nce	The paint on some partition walls is peeling.
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$40,640	\$21,173	\$61,813	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet in the library and teacher's lounge is beyond useful life and in poor condition (worn and stained).
	C3020410	VAT (Resilient Flooring)	System	Beyond Useful Life	Renew System	1	Ea.	\$559,262	\$291,376	\$850,638	Necess ary- 2-5 Yrs	Deferred Maintena nce	The 9x9 vinyl asbestos tiles in the main lobby, corridors, and classrooms are beyond useful life and in fair to poor condition (worn and cracked).
	G2020	Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$99,845	\$52,019	\$151,865	Necess ary- 2-5 Yrs	Deferred Maintena nce	Asphalt surface parking is in poor condition due to cracks, pot holes, and uneven surfaces. The road surface is in fair condition with some damage. There is insufficient parking capacity for the occupants.

Prince George County Public Schools

13300 Old Marlboro Pike
Upper Marlboro, MD 20772

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

G2030	Pedestrian Paving	System	Beyond Useful Life	Renew System	1	Ea.	\$24,310	\$12,666	\$36,976	Necess ary- 2-5 Yrs	Deferred Maintena nce	Concrete sidewalks immediately adjacent to the facility are beyond useful life and in fair condition (with cracks and damaged edges).
A1010	Standard Foundations	Wall Foundations	Failing	Professional Services- Inpect foundation Walls	1	Each	\$10,171	\$5,299	\$15,471	Potentia lly Critical- 12 months	Building Integrity	Professional services to investigate foundation wall and/or moisture barrier failure. Structural cracks were observed on the building walls in the boiler room, gang restrooms, and near the main entrance that indicates possible settlement or damage to the slab-on-grade.
D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$356,222	\$185,592	\$541,814	Necess ary- 2-5 Yrs	Deferred Maintena nce	Plumbing fixtures are mostly original and need update. Some toilets and urinals were updated, while most sinks, faucets, drinking fountains and other plumbing fixtures were not updated. Some were covered with plastic bags to prevent students from using them. Some sinks are chipped, cracked, and have rust. Some faucets are slow and broken.
D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$30,883	\$16,090	\$46,973	Necess ary- 2-5 Yrs	Deferred Maintena nce	Domestic water lines and equipment are mostly original, had a few line leaks, and have limited capacity.
D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$33,546	\$17,477	\$51,023	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$48,455	\$25,245	\$73,700	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$1,417,435	\$738,484	\$2,155,919	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most of the terminal units are original and show signs of damage. The school is in need of complete terminal units update. The school engineer stated the units control system is not operating at times and, if operating, the temperature is not adequate.
D3020	Heat Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$310,430	\$161,734	\$472,164	Necess ary- 2-5 Yrs	Deferred Maintena nce	The heat generation system is original and is beyond useful life. The boilers are in poor condition. The school engineer indicated that the boilers are in constant break and repair.
D3030	Cooling Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$363,145	\$189,198	\$552,343	Necess ary- 2-5 Yrs	Deferred Maintena nce	Although most of the school has window units for cooling generation, a permanent cooling generation system is recommended.

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$575,068	\$299,610	\$874,678	Necess ary- 2-5 Yrs	Deferred Maintena nce	The distribution system pipes, pumps, ductwork, vents and units are mostly outdated and beyond useful life. Circulation pumps are old, pipe insulation is peeling off, and pipes are leaking. There are leaks and stains throughout the school.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$52,715	\$27,464	\$80,179	Necess ary- 2-5 Yrs	Deferred Maintena nce	The control system is limited to heating units and is original and needs to be updated.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$41,533	\$21,639	\$63,171	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$215,118	\$112,076	\$327,194	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$95,312	\$49,658	\$144,970	Necess ary- 2-5 Yrs	Deferred Maintena nce	The main power switchgear and most of the electrical panels in hallways and classrooms are original and need update. Some panels have no capacity to expand at the time of need.
D5020	Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$750,783	\$391,158	\$1,141,940	Necess ary- 2-5 Yrs	Deferred Maintena nce	The lighting system is partially updated, but most classrooms and offices are in need of update. Many of the light covers are stained and broken. Some rooms need ballast and wiring.
D5030	Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$149,624	\$77,954	\$227,578	Necess ary- 2-5 Yrs	Deferred Maintena nce	The security and communication systems are beyond useful life and in need of update. The communication system's equipment is original and has wires are in areas that could be a tripping hazard.
D5090	Other Electrical Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$4,792	\$2,497	\$7,289	Necess ary- 2-5 Yrs	Deferred Maintena nce	Other electrical systems are not located in dedicated space and jammed with other materials in a small storage room. Some electrical panels have no expanding capacity. The system shown in the photo needs adequate cooling and ventilation. The lack of both adequate cooling and ventilation might cause a fire hazard.
E1020	Institutional	System	Beyond Useful Life	Renew System	1	Ea.	\$7,455	\$3,884	\$11,338	Necess ary- 2-5 Yrs	Deferred Maintena nce	
G3060	Fuel Tank	System	Beyond Useful Life	Renew System	1	Ea.	\$71,029	\$37,006	\$108,035	Necess ary- 2-5 Yrs	Deferred Maintena nce	
G3060110	Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$3,727	\$1,942	\$5,669	Necess ary- 2-5 Yrs	Deferred Maintena nce	
E1090350	Food Service Equipment, EACH	System	Beyond Useful Life	Renew System	1	Ea.	\$155,275	\$80,898	\$236,173	Necess ary- 2-5 Yrs	Deferred Maintena nce

Facility: \Elementary Schools\Langley Park-McCormick Elementary

Address: 8201 15th Avenue, Hyattsville, MD 20783

Attributes:

School Area	1
Congressional	8
County Council	2
Historical Building	No
Legislative	47
Original Building	Built in 1958, 26,822 S.F.
School Addition 1	Built in 1979, 37,372 S.F.
School Board District	3
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	64,194 S.F.

Year Built:
Last Renovation:

Facility Description:

Langley Park-McCormick Elementary School is a two-story, 64,194 square foot facility located on a 10-acre site close to MD Route 650 in Hyattsville, MD. The original building was constructed in 1958 and an addition was constructed in 1979. No major renovations have been performed. In 2008 the chillers were replaced, and in 2010 the exterior was re-painted.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, interior signage, restrooms, drinking fountains, fire alarm, and door hardware. The fire alarm system is not ADA compliant.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade with concrete footings and foundation walls. The building has a crawl space of cast in place concrete construction.

B. SHELL

The superstructure is concrete reinforced masonry with face brick, load bearing CMU, and glaze block walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill on built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. Interior doors are solid core wood doors with hollow metal frames. All the old doors have fire labels, except some of the ones that have been replaced do not have labels. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and glazed block. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes concrete risers and treads with tile finishes. Interior wall finishes are typically CMU and glazed block. Floor finishes in common areas is typically VCT and ceramic tile. Floor finishes in assignable spaces are typically VCT, terrazzo, and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 56,600 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical tile. Ceiling finishes in assignable areas are typically suspended acoustical tile and insulation board on bar joist.

D. SERVICES

Conveying

Conveying equipment includes one hydraulic elevator.

Plumbing

Fixtures are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by an RBI gas fired hot water generator, with a re-circulating pump and separate storage tank.

HVAC

Heating is provided by two oil-fired hot water boilers. Cooling is supplied by one water cooled chiller, and corresponding roof mounted BAC cooling tower. Chillers were replaced in 2008. The heating/cooling distribution system is a 2-pipe system to roof mounted air handling units. Twelve classrooms have unit ventilators. Fresh air is supplied from air handling units. Ceiling-mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are pneumatic, and are not centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main switchboard. Power distribution wiring is typically copper. Lighting and branch wiring is typically. Lighting is typically fluorescent lay-in troffers with T-8 lamps in both the corridors and classrooms. The exterior parking and roadway lighting consists of bracket mounted HID luminaries on aluminum poles and concrete bases. Emergency power and lighting are present and exit signs are present at exit doors and near stairways.

Communications and Security

The fire alarm system consists of audible signal devices in common spaces, interior corridors, etc. The fire alarm control panel (FACP) is a non-addressable, six-zone system. The system is activated by pull stations and/or smoke detectors. The telephone and data systems are separate and include dedicated closets or cabinets. The building includes an internal security system that is actuated by contact, optical or combination devices, and is centrally monitored.

Other Electrical Systems:

The building has a roof/structure-mounted emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple-seating furnishings that are in fair condition.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking spaces available on-site where two out of 52 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting for vehicular and pedestrian night traffic and an underground fuel tank was replaced 2003. The school has an 8,000 gallon fuel oil tank of dual wall construction with level and leak detection systems.

General Information:

Function:	Elementary School
Gross Area:	59,444 S.F.

Year Built:
Last Renovation:

Facility Description:

Laurel Elementary School is a one-story, 59,444 square foot facility located on a 4.1-acre site less than two miles east of I-95 in Laurel, Maryland. The original building was constructed in 1974, with no additions constructed. In 2009 the underground fuel tank, food service equipment, and kitchen grease trap were replaced along with a major renovation for the HVAC systems. In 2012 there was a POD conversion of 30,122 S.F. into classrooms that also includes ADA compliance.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However, with the POD conversion into classrooms performed in 2012 most of the facility was updated to comply with ADA requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade with concrete footings and foundation walls. The building has a crawl space of cast in place concrete construction.

B. SHELL

The superstructure is concrete reinforced masonry with face brick, load bearing CMU, and glazed block wainscot walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill on built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. With the POD conversion into classrooms performed in 2012 most exterior windows and doors were replaced. Roofing was replaced in 2007.

C. INTERIORS

Interior partition wall types typically include painted CMU and glazed block. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes concrete risers and treads with tile finishes. The interior wall finishes are typically CMU and glazed block. Floor finishes in common areas are typically VCT, carpet, ceramic tile, and wood (on the stage). Floor finishes in assignable spaces are typically VCT, ceramic tile, and carpet. Ceiling finishes in common areas and assignable areas are typically suspended acoustical tile. With the POD conversion into classrooms performed in 2012 most of the flooring and ceiling finishes were renovated including interior doors and fittings.

D. SERVICES**Conveying**

The building does not include conveying equipment; no elevator.

Plumbing

The plumbing fixtures have been recently renewed in 2008. The water closets are low-flow, flush valve. Domestic water distribution is copper. Sanitary waste system is primarily cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas fired water heater, with remote storage tank.

HVAC

Heating is provided by two oil-fired boilers. Cooling generation is provided by an indoor air cooled chiller with two remote outdoor heat discharge units. The heating and cooling distribution system is by rooftop and indoor penthouse air handling units. There are also some baseboard fin-tube radiators in some of the rooms. Ceiling-mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are pneumatic. HVAC was renovated in 2009.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

Electrical service is fed from a pole mounted to underground secondary utility that delivers power to a main switchboard. Power distribution wiring is typically copper. Lighting and branch wiring is typically grounded. Lighting is typically fluorescent lay-in troffers. The gym has suspended fluorescent units with wire guards. The school underwent a lamp and ballast change-out in early 2008 featuring T-8 lamps. Exterior/parking lighting is bracket mounted HID's on aluminum poles and concrete base. With the POD conversion into classrooms performed in 2012 most of lighting fixtures and branch wiring were replaced. Emergency power and lighting are present and exit signs are present at exit doors and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and visible signal devices in common spaces, interior corridors, etc. The fire alarm control panel (FACP) is an addressable system with battery back-up. The system is activated by pull stations and smoke detectors. The telephone and data systems are separate and do not include dedicated closets or cabinets. The building includes an internal security system that is actuated by contact, optical or combination devices and is centrally monitored. With the POD conversion into classrooms performed in 2012 most of communication systems were renovated.

Other Electrical Systems

The building has an emergency generator, gas fired, with an automatic transfer switch (ATS).

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment updated in 2009 and a kitchen grease trap replaced in 2009. The building includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings. With the POD conversion performed in 2012 most of Institutional equipment was replaced.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking spaces available on-site where three out of 50 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon underground fuel oil tank replaced in 2008.

Current Repair Cost: \$2,004,956.79**Replacement Cost:** \$15,798,689.00**FCI:** 12.69%

School Addition 4	Built in 1997, 4,684 S.F.
School Board District	3
School Grade	PreK-5th

General Information:

Function:	Elementary School
Gross Area:	54,103 S.F.

Year Built:

Last Renovation:

Facility Description:

Lewisdale Elementary School is a one-story, 54,103 square foot facility located on a 9.6-acre site close to MD Route 193 in Hyattsville, MD. The original building was constructed in 1953 and additions were constructed in 1956, 1963, 1979, and 1997, with no major renovation performed.

ACCESSIBILITY ISSUES

Access to this school from the parking area is through a rough asphalt sidewalk that is not to grade with the main entrance. The main entrance, which is not an assisted entrance, provides access to the lobby. From this location the remaining sections of the school are at grade level. However, the interior lacks proper ADA signage, door hardware, drinking fountains, and restrooms. This school was designed prior to any consideration for the handicapped. The facility is not generally in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade, concrete footings, and foundation walls. The building does not have a basement cellar or sub-floor.

B. SHELL

The superstructure is a mixture of steel frame, concrete frame, and load bearing masonry walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum and steel sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat or low-slope with built-up roof replaced in 1998.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, and toilet partitions. The interior wall finishes are typically painted CMU. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces are typically vinyl composition tile. Ceiling finishes in common areas are typically suspended acoustical panels and exposed deck. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. BUILDING SERVICES

Conveying Systems

This one-story building does not have an elevator.

Plumbing

Plumbing fixtures in the entire school are with flush valve water closets, except in Addition 4. Plumbing fixtures are original. Piping is primarily copper supply and cast iron drain. Domestic hot water is provided by a gas fired water heater and storage tank system.

HVAC

Heating is provided by two dual fuel boilers, both original to the building, 1953. Each of the boilers uses natural gas as primary fuel. Air conditioning is provided in the original building and Additions 1, 2 and 3 by two air cooled chillers. The system is a 2-pipe distribution system with individual controls for the unit ventilators in each classroom. Addition 4, the classroom module has five York package rooftop units with gas heat, original to the building construction in 1997. Fresh air is supplied by unit ventilators. Ceiling-mounted exhaust fans are installed in restrooms.

Fire Sprinkler System

The building is not fully sprinkled; in isolated areas only.

Electrical

Facility Executive Summary

The incoming electrical service is supplied by a pad mount transformer serving power to the MDP, located in the original building, installed in 1963. The later date additions are fed from the MDP. Power service is provided by a singular dry-type transformer. There is no emergency power generator system. Lighting is primarily fluorescent, recessed in corridors, surface in classrooms. The gym (Addition 1) has high-bay lighting, which were installed in 1985. The original building was renewed in 1985, Addition 2 was renewed in 1990, and Addition 4 (Modules), is original to construction, 1997.

Other Electrical

The building has an emergency generator.

Fire Protection/Life Safety Systems

The main fire alarm system is an addressable system, which was installed in 2006. There are audible and strobe signal devices in the corridors. There is a centrally monitored security system, intercom, and phone/data systems.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common and assignable spaces. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and include dedicated closets or cabinets that are inadequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. Kitchen was upgraded to code requirements in 2007. The building also includes fixed window treatment and temporary seating arrangements with standard furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where three out of 56 are handicap spaces with the path to the building entrance. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The water supply is provided from the campus distribution system.

Current Repair Cost: \$9,148,251.42**Replacement Cost:** \$14,415,614.19**FCI:** 63.46%

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems D4010		Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$5,747,176 \$200,641	\$2,994,279 \$104,534	\$8,741,455 \$305,175	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5010240		Main Panel	System	Beyond Useful Life	Renew System	1	Ea.	\$88,954	\$46,345	\$135,299	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5020		Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$699,773	\$364,582	\$1,064,355	Necess ary- 2-5 Yrs	Deferred Maintena nce	
E1020		Institutional Equipment	System	Beyond Useful Life	Renew System	1	Ea.	\$96,861	\$50,465	\$147,326	Necess ary- 2-5 Yrs	Deferred Maintena nce	
G2020		Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$90,607	\$47,206	\$137,814	Necess ary- 2-5 Yrs	Deferred Maintena nce	The asphalt parking surface is in poor condition and will require resurfacing and re-striping. Any ADA considerations should be included as part of this upgrade.
G2030		Pedestrian Paving	System	Beyond Useful Life	Renew System	1	Ea.	\$34,446	\$17,947	\$52,393	Necess ary- 2-5 Yrs	Deferred Maintena nce	Sidewalks are a mixture of asphalt and concrete. The asphalt application is in very poor condition and will require upgrade. This project provides a budgetary consideration to remove the current asphalt application and replace it with a concrete application compliant with today's ADA legislation.
G3060110		Natural Gas	System	Beyond Useful Life	Renew System	1	Ea.	\$5,436	\$2,832	\$8,268	Necess ary- 2-5 Yrs	Deferred Maintena nce	
G3060110		Propane Tank	System	Beyond Useful Life	Renew System	1	Ea.	\$4,544	\$2,367	\$6,911	Necess ary- 2-5 Yrs	Deferred Maintena nce	
B2020		Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$154,681	\$80,589	\$235,271	Necess ary- 2-5 Yrs	Deferred Maintena nce	The single pane, aluminum framed window applications are weathered. It is recommended that a new double pane aluminum framed weather tight application be installed within the next two to five years.
B2030		Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$99,332	\$51,752	\$151,084	Necess ary- 2-5 Yrs	Deferred Maintena nce	The main entrance and service entrances are beyond the expected life cycle for this type of application. Universal upgrades are recommended. Any ADA requirement should be addressed during this upgrade.

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

C1010126	Drywall Partitions/Metal Stud Framing	System	Beyond Useful Life	Renew System	1	Ea.	\$71,219	\$37,105	\$108,325	Recommended -3-10 Yrs	Deferred Maintenance	Drywall partitions are in fair condition considering the age of the application. Interior resurfacing and wall repairs, as well as wall replacement is required within the next ten years.
C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$100,815	\$52,524	\$153,339	Necessary- 2-5 Yrs	Deferred Maintenance	Interior door systems are from original construction and beyond the expected life cycle for this type of application. Universal upgrades are recommended. Any ADA consideration should be designed into this upgrade.
C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$146,774	\$76,469	\$223,244	Necessary- 2-5 Yrs	Deferred Maintenance	
C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$212,502	\$110,713	\$323,215	Recommended -3-10 Yrs	Deferred Maintenance	Interior painted finishes appear to be apart of a cyclical renewal program. This project provides a budgetary consideration for a universal upgrade within the next ten years.
C3020410	VCT	System	Beyond Useful Life	Renew System	1	Ea.	\$272,084	\$141,756	\$413,840	Recommended -3-10 Yrs	Deferred Maintenance	Tile applications are expected to end their normal life cycle within the next ten years. Removal and replacement is recommended.
C3020410	Ceramic Tile	System	Beyond Useful Life	Renew System	1	Ea.	\$29,798	\$15,525	\$45,323	Necessary- 2-5 Yrs	Deferred Maintenance	Several areas of ceramic tile are damaged. Considering the current age and condition replacement is warranted.
C3030210	Acoustical Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$309,857	\$161,436	\$471,293	Necessary- 2-5 Yrs	Deferred Maintenance	Acoustical ceilings are damaged and stained. Grid and tile universal replacement is recommended within the next two to five years.
D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$408,695	\$212,930	\$621,625	Necessary- 2-5 Yrs	Deferred Maintenance	
D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$29,157	\$15,191	\$44,348	Necessary- 2-5 Yrs	Deferred Maintenance

eCOMET Facility Report

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Longfields Elementary
Address: 3300 Newkirk Avenue, Forestville, MD 20747

Attributes:

School Area	1
Congressional	4
County Council	6
Historical Building	No
Legislative	25
Original Building	Built in 1969, 52,565 S.F.
School Board District	7
School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	52,565 S.F.	Last Renovation:

Facility Description:

Longfields Elementary School is located on an 11.7-acre site inside I-495 (Capital Beltway) in Forestville, MD. This one-story, 52,565 square foot facility was constructed in 1969 with no additions constructed or major renovations performed since that time. In 2012 a kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and doors wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap toilet stalls are available in the gang restrooms (both boys and girls). Toilet configurations and accessories are adequate. Interior graphics and/or signage for ADA compliance are adequate and present on the restroom doors but missing on some entrance doors. All programs in this one-story facility appear to be handicap accessible. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The building does not have a basement, cellar, or crawl space.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow metal steel doors. The exterior has brick veneer. The metal windows throughout the building are original. Most of the classrooms have a fire exit windows. The exterior doors throughout the building are original. All the exterior doors have been repainted in 2004. The original building has low-slope built up roof with gravel ballast that was replaced in 2004.

C. INTERIORS

The interior partition walls typically include painted CMU with glazed wainscot in the corridors and folding metal partitions in classrooms 8 and 9. The interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards. Toilet accessories such as metal toilet partitions are original.

The interior wall finishes are typically painted CMU and folding metal partitions. Floor finishes throughout the building are typically vinyl asbestos tiles (VAT), carpet, and ceramic tiles. There is VAT floor finish in corridors, classrooms, multi-purpose room and underneath the carpet in the library. The overall ceiling finishes are typically suspended acoustical needlepoint tiles. Most stained acoustical ceiling tiles throughout the building were replaced in 2004.

D. SERVICES

Conveying

The building does not have conveying system.

Plumbing

Fixtures are original. Sinks, faucets, and other plumbing fixtures were not updated while some urinals and toilets were. Most of the water fountains are original. Domestic water distribution is mostly copper. Sanitary waste system is cast iron. Rain water system is external with roof drains. Domestic hot water is provided by a new gas hot water heater.

HVAC

Heating is provided by two original oil/gas fired boilers. Cooling is supplied by an original chiller and a newer cooling tower. The heating/cooling distribution system is ductwork, 2-pipe, and air handlers. Fresh air is supplied by infiltration and air handlers. Ceiling exhaust fans are in restrooms. Controls system is pneumatic and is not centrally controlled by an energy management system.

Fire Protection

The building does not have fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pole-mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Most of the switch gear is still original. Lighting and branch wiring is serving recessed, surface-mounted, and pendant-mounted fluorescent and incandescent. 40% of illumination was updated in 2007. Emergency power and lighting is present but the generator is original. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors. The system is activated by pull stations and heat sensors and is not centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are not adequately secured and cooled. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems:

The building has an original emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The library has shelves and furniture such as tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment and multiple seating furnishings (folding chairs and tables) in the multi-purpose room.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site and where there is one reserved handicap space out of a total of 65 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Current Repair Cost: \$10,458,717.77**Replacement Cost:** \$14,822,816.69**FCI:** 70.56%

School Board District	2
School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	54,506 S.F.	Last Renovation:

Facility Description:

Magnolia Elementary School is a one-story, 54,506 square foot facility located on a 10-acre site close to I-495 (Capital Beltway) in Lanham, MD. The original building was constructed in 1971, with no additions constructed or major renovations performed since that time. In 2009 an underground tank was replaced. In 2012 a kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and wide enough doors for wheel chair access, but lacks push button wall switches and automatic door openers. Exterior doors have panic hardware. Handicap toilet stalls are available in two gang restrooms. Toilet configurations and accessories are adequate. Interior graphics and/or signage for ADA compliance are inadequate and missing in some portions of the building (only parking areas have handicap signs). All the programs in this one story facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on the slab-on-grade which is in good condition. The building does not have a basement or crawl spaces.

B. SHELL

The superstructure is load bearing masonry walls. Roof construction is metal pan with lightweight fill that is resting on open web steel joist framing. The exterior enclosure is brick veneer over CMU. Exterior windows are typically aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel doors. The facility has a low-slope built up roof with gravel ballast.

C. INTERIORS

Interior partition walls typically include painted CMU, gypsum drywalls, and folding metal partitions (in six classrooms). Interior doors, including fire doors, are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. There is a metal ladder to access the roof hatch. Interior wall finishes are typically painted CMU, gypsum drywalls, and folding metal partitions. Floor finishes throughout the building are typically vinyl asbestos tiles (VAT), carpet, and ceramic tiles. The overall ceiling finishes are typically suspended acoustical tiles.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

A few toilets (with flush valves) were replaced in the past. Other fixtures and accessories such as urinals, sinks, toilets and metal partitions are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a storage tank with heat exchanger that operates in winter with the boiler system and an gas hot water heater, which was installed in 1984.

HVAC

Heating is provided by two boilers, which were replaced in 2007. There is reported ACM in the boiler room. Cooling is supplied by air cooled chiller plant. The heating/cooling distribution system is a 2-pipe system using air handlers, fan coil units, fin tube radiators, and unit ventilators. Fresh air is supplied by unit ventilators and air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic, and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to an original (1970) main panel. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent with some incandescent. Emergency power and lighting are battery powered and exit signs are present at exit doors and near stairways and are typically illuminated.

Facility Executive Summary

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The library has shelves and furniture. The nurse's room has beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in multi-purpose room. The metal window have blinds. There are sinks and cabinets in the classrooms.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site and where there are two reserved handicap spaces out of total about 83 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The facility has an underground fuel oil that was replaced in 2009.

Current Repair Cost: \$8,697,820.90**Replacement Cost:** \$15,106,329.77**FCI:** 57.58%

Last Renovation:

Facility Description:

Marlton Elementary School is a one-story, 60,270 square foot facility located on a 10-acre site close to U.S. Route 301 in Upper Marlboro, MD. The original building was constructed in 1974 and has had no additions constructed or major renovations performed since that time. In 2011 some minor construction renovation projects were performed. In 2012 there was a POD conversion into classrooms of 8,862 S.F. into classrooms that also included ADA updates.

ACCESSIBILITY ISSUES

Upgrades were made to make this one-story facility handicap assessable in 2012. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement or crawl space.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with fixed thermo pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof replaced in 2001.

C. INTERIORS

Interior partition wall types typically include painted CMU, ceramic tile wainscot in the corridors, and drywall. Classroom pods do not have fixed interior partitions, except for one, which has drywall partitions installed in 2007. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk, tack boards and graphics, toilet accessories, handrails, and toilet partitions. There are no stairs in the building. Interior wall finishes are typically painted CMU and drywall. Floor finishes in common areas are typically vinyl composition tile and ceramic tile. Floor finishes in assignable spaces are typically vinyl tile. During the 2008 Assessment it was reported in the A.H.E.R.A Management Plan Report, the school contains approximately 12,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and in assignable areas are typically suspended acoustical panels. Ceiling finish in gym areas is Tectum panels. Ceiling finish in media center is needlepoint.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. Sinks, faucets, and other plumbing fixtures were not updated, but new urinals and toilets were installed 2007, including the gym area. Some of the water fountains are original. Domestic water distribution is mostly copper. Sanitary waste system is cast iron. Rain water system is internal and external with roof drains and scuppers. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided by two original gas/oil fired Boilers. Cooling is supplied by two water cooled chillers. The heating/cooling distribution system is a ductwork for cooling and 2-pipe for heating system using air handlers. Fresh air is supplied by infiltration and air handling units. Most of the air handling units are original. Ceiling-mounted exhaust fans are installed in bathrooms. Controls and instrumentation are pneumatic and not centrally controlled by an energy management system.

Fire Protection

The building has 5% fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Illumination was updated 2007. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are inadequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and two grease traps. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where two out of 59 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 6000 gallon fuel oil tank.

Current Repair Cost: \$10,209,577.59**Replacement Cost:** \$16,369,186.12**FCI:** 62.37%

General Information:

Function: Elementary School

Gross Area: 48,912 S.F.

Year Built:**Last Renovation:****Facility Description:**

Mattaponi Elementary School is a one-story, 48,912 square foot facility located on a 24.5 -acre site close to U.S. Route 301 in Upper Marlboro, MD. The original building was constructed in 1962 and multiple additions were constructed in 1964 and 1971, with no major renovation. In 2008 an underground fuel tank was replaced, and in 2012 the parking lot was improved.

ACCESSIBILITY ISSUES

The main entrance doors are wide enough for wheel chair access, but lack push button wall switches and automatic door openers. Toilet configurations and accessories are generally inadequate and do not comply with all the ADA accessibility guidelines. Interior graphics and/or signage for ADA compliance are inadequate and missing in the building. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. The building has a crawl space of CMU construction.

B. SHELL

The superstructure is steel frame and load bearing CMU walls. Floor construction is concrete footings and foundation walls. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of precast tilt-up concrete panels and brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing was replaced in 2006.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed block wainscot in the corridors of the original building, and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings, i.e., chalk and tack boards, graphics, toilet accessories, shelving, and toilet partitions. There are no stairs in the building, except for a small steel staircase in boiler room. Interior wall finishes are typically painted CMU and drywall. Floor finishes in common areas of the original building and the 1964 addition is vinyl asbestos tiles and ceramic tiles. Floor finishes in common areas of the 1971 addition are vinyl composition tiles. Floor finishes in assignable spaces of the original building and the 1964 addition are vinyl asbestos tiles and carpet. Carpet covers vinyl asbestos floor tiles in classrooms and media center. Floor finishes in assignable spaces of the 1971 addition is carpet over vinyl tile. There are mismatched vinyl floor tiles throughout the building. During the 2008 Assessment it was noted in the A.H.E.R.A Management Plan Report, the school contains 31,300 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finish in corridor of 1971 addition is drywall. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. Sinks, faucets, and other plumbing fixtures were not updated and mostly original, while 70% of the urinals and toilets were updated in 2007. Most of the water fountains are original. Domestic water distribution is a mix of copper and galvanized. Sanitary waste system is cast iron. Rain water system is internal with roof drains and scuppers. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided by two gas/oil fired Boilers replaced in 2007. Cooling is supplied by approximately 90% window and 10% roof top units. The heating/cooling distribution system is a ductwork and direct for cooling and 2-pipe for heating system using air handlers, radiators, fan coil units, and unit ventilators. Fresh air is supplied by infiltration and air handling units. Most of the air handling units are original. Restrooms have ceiling exhaust vents. Controls and instrumentation are pneumatic not centrally controlled by an energy management system.

Facility Executive Summary

Fire Protection

The building has 5% fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendant-mounted fluorescent and incandescent. Illumination is 50% updated and 50% still original. Emergency power and lighting are not present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and is not centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are inadequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed audio-visual equipment, casework, library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed window treatment, floor grilles, mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where it was improved in 2012 to include 92 parking spaces with paths to building entrances. Drainage is generally handled by area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 6000 gallon underground fuel oil tank replaced in 2008.

Current Repair Cost: \$9,291,155.69**Replacement Cost:** \$13,526,736.31**FCI:** 68.69%

Facility Executive Summary

D3030	Cooling Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$232,821	\$121,300	\$354,121	Necess ary- 2-5 Yrs	Deferred Maintenance	Almost all of the window units, unit ventilators, air handling units, and other units are original or beyond useful life. The air handlers have a few leaks in the ceiling and in around the condensation lines because of deteriorating insulation.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$530,695	\$276,492	\$807,187	Necess ary- 2-5 Yrs	Capital Renewal	The HVAC distribution system is original and has few leaks and control issues. Ductwork is deteriorating, vents are dirty and clogged, piping insulation is out and leaking condensate water.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$48,423	\$25,228	\$73,651	Necess ary- 2-5 Yrs	Environm ental	Some of the control system was replaced but is mostly still original and beyond useful life. It was reported that some classrooms get too hot in the winter and too cold in the summer.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$38,640	\$20,132	\$58,772	Necess ary- 2-5 Yrs	Environm ental	
D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$198,583	\$103,462	\$302,044	Necess ary- 2-5 Yrs	Building Integrity	The electrical distribution system and switch-gear is mostly original and is beyond useful life. Some panels have no expansion capacity. Approximately 50% percent of the system was not replaced, but the remaining was replaced throughout of the years. The remaining 50% needs update. Some fixtures and light covers are damaged or missing and ballast are out of order.
D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$87,552	\$45,615	\$133,167	Necess ary- 2-5 Yrs	Capital Renewal

Year Built:
Last Renovation:

Facility Description:

Matthew Henson Elementary School is a single-story, 57,857 square foot facility located on a 10.1-acre site close to I-495 (Capital Beltway) in Landover, MD. The original building was constructed in 1969, with no additions constructed or major renovations performed since that time. In 2008 the roof covering and underground fuel tank were replaced.

ACCESSIBILITY ISSUES

Efforts have been made to make the facility compliant with ADA requirements. The facility has handicap parking close to the main entrance, a ramp to the main entrance, and entrance doors wide enough for wheel chair access. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade that. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof and standing seam metal faade which was replaced in 2008.

C. INTERIORS

Interior partition wall types typically include painted CMU, exposed brick, and plywood clusters. Interior doors are generally a combination of solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, shelving and toilet partitions. Interior wall finishes are typically painted CMU, plywood clusters, tile, exposed brick, and glazed blocks. Interior painting was redone in 2003. Floor finishes in common areas are typically ceramic tile, vinyl composition tile, vinyl asbestos tile, and carpet. Floor finishes in assignable spaces are typically vinyl tile and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 15,825 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers that supply fan coils, air handlers and fin tube radiators throughout the building. Cooling is provided by a water cooled chiller through a 2-pipe system to fan coils, air handlers and terminal units in the building. A roof mounted condensing unit serves split system air handler for the library and office areas. Fresh air is supplied mostly by air handlers and fan coils. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to the main disconnect. Circuit additions have been installed to address air conditioning power, but most of the system is original. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors and a limited CCTV system.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surfaces parking are available on-site where two out of 47 are handicap spaces with path to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, and electrical. The under ground oil tank was replaced in 2008.

Current Repair Cost: \$10,703,635.07**Replacement Cost:** \$16,317,591.38**FCI:** 65.60%

School Board District	9
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	68,142 S.F.

Year Built:**Last Renovation:****Facility Description:**

Melwood Elementary School is a one-story, 68,142 square foot facility located on a 10-acre site close to MD Route 4 in Upper Marlboro, MD. The original building was constructed in 1967 and additions were constructed in 1969 and 2000, with no major renovations. A POD conversion of 10,100 S.F. into classrooms is currently being programmed for a 2013 construction completion.

ACCESSIBILITY ISSUES

There are three accessible entrances for the school building: main entrance to the lobby, an entrance for 2000 addition, and another entrance for 1969 addition. All accessible entrances have curb cuts, concrete ramp, and wide enough doors for wheel chair access, but lack push button wall switches and automatic door openers. Handicap stalls are available in two gang restrooms. Toilet configurations and accessories are adequate. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements (only parking areas have handicap signs). All programs in the facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on the slab-on-grade. The building does not have a basement or crawl space.

B. SHELL

The superstructure is load bearing masonry walls. The roof deck is resting over open web steel joist roof framing. The exterior enclosure is brick veneer over CMU with fireproof wall panels. Exterior windows are typically aluminum sash with operable single-pane glazing. The exterior windows in the 2000 addition are typically aluminum sash with operable thermo-pane glazing. Fire exit windows are available in all the classrooms in the 2000 addition. All the classrooms in the original building and 1969 addition have exterior doors. The exterior doors are hollow metal steel doors. The facility has low-slope, built up roof with gravel ballast. The built-up roof was replaced in 1996. The roofing in the 2000 addition is typically pitched, built-up roof with gravel ballast.

C. INTERIORS

The interior partition wall types typically include painted CMU with glazed wainscot in the corridors and folding metal partitions (in pods). Interior doors in the original building and 1969 addition, including fire doors, are generally solid core wood doors with hollow metal frames. Interior fittings in the building include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original black-boards.

The interior wall finishes are typically painted CMU and folding metal folding partitions (in pods). Floor finishes throughout the building are typically vinyl composition tiles (VCT), vinyl asbestos tiles (VAT), carpet, and ceramic tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 21,650 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended (fissured ceiling) acoustical tiles.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. The toilets (with flush valves) were replaced throughout the original building in 2007. Other plumbing fixtures such as urinals and sinks are original. Domestic water distribution is copper and galvanized steel. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater, which was installed in 1993. There is an internal heat exchanger in the hot water storage tank that operates in winter when the boilers are in service.

HVAC

Facility Executive Summary

Heating is provided by two original Boilers, which were installed in 1967. Cooling is supplied by window units, and by gas-fired and DX rooftop units in the addition. The heating distribution system is 2-pipe, radiant system using air handlers, fan coil units, and fin tube radiators. Fresh air is supplied by air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to an original (1967) switchgear with a disconnect, which was added in 2000 for the window A/C unit service. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted and pendent-mounted fluorescent with some incandescent. Emergency battery power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have a emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves and furniture, such as tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are three reserved handicap spaces out of total about 43 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an underground oil tank replaced in 1994.

Current Repair Cost: \$10,641,226.53**Replacement Cost:** \$18,257,829.46**FCI:** 58.28%

School Board District	7
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	45,123 S.F.

Year Built:
Last Renovation:**Facility Description:**

Middleton Valley Elementary School is a one-story, 45,123 square foot facility located on an 11-acre site close to MD Route 5 and Interstate 495 (Capital Beltway) in Temple Hills, MD. The original building was constructed in 1961 and multiple additions were added in 1963 and 1964, with no major renovation. In 2009 an underground fuel tank was replaced.

ACCESSIBILITY ISSUES

This one-level facility is handicap accessible for the most part. However, additional enhancements are required to gain full compliance with current ADA legislation. The signage, drinking fountains, restrooms, and door hardware are some of the items that need to be addressed. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame with masonry construction. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat with built-up roof replaced in 1993.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving and toilet partitions. The interior wall finishes are typically painted CMU and tile. Interior painting was redone in 2005. Floor finishes in common areas is typically vinyl composition tile and carpet. Floor finishes in assignable spaces is typically vinyl tile. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. Domestic water distribution is copper. During the 2008 Assessment there was a reported concentration of lead in the system and bottled water was provided. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas-fired hot water heater in fair condition with storage tank and circulator pumps.

HVAC

Heating is provided by two gas/oil-fired hot water boilers, which were installed in 2007. Cooling is supplied by window units. The heating/distribution system is a hydronic 2-pipe system using air handlers, fan coil units, fin tube radiators, and unit ventilators. Fresh air is supplied by unit ventilators and air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic, and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent, and some incandescent. Emergency power and lighting are battery powered and exit signs are present at exit doors and near stairways and are typically illuminated but in need of replacement.

Communications and Security

Facility Executive Summary

The fire alarm system consists of audible/strobe annunciators in common spaces and interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatments.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where two out of 60 are handicap spaces with path to building entrances. Drainage is generally handled by area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon underground fuel oil tank of dual wall construction with level and leak detection systems replaced in 2009.

Current Repair Cost: \$8,522,660.79**Replacement Cost:** \$12,723,294.44**FCI:** 66.98%

General Information:

Function:	Elementary School
Gross Area:	62,209 S.F.

Year Built:
Last Renovation:**Facility Description:**

Montpelier Elementary School is a single-story, 62,209 square foot facility located on a 10-acre site close to MD Route 295 (Baltimore-Washington Parkway) in Laurel, MD. The original building was constructed in 1968 and one addition was constructed in 2002, with no major renovations. In 2012 some asbestos-ceiling tiles were replaced.

ACCESSIBILITY ISSUES

Efforts to make the facility comply with ADA requirements were observed. The ramp to the main entrance appears to be in compliance, but the main entrance hardware needs improvement. The interior ramps in the corridors appear to be too steep and lack change of color and texture. Restrooms in the 2002 addition appear to be in compliance with the ADA requirements, but the original building needs improvements to its restrooms. However, further study by an ADA Specialist is required to insure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. The 2002 addition has thermo pane glazing. Exterior doors are hollow metal steel. Roofing on the original building was replaced in 2006, is typically low-slope with built-up roof and architectural precast concrete panels around the eaves. The 2002 addition has the same kind of roofing but with standing seam metal around the eave's edges.

C. INTERIORS

Interior partition wall types typically include painted CMU and movable walls in the original building. The 2002 addition has painted CMU and drywall. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving and toilet partitions. The interior wall finishes are typically drywall, tile, and movable walls. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, carpet, and VAT. Floor finishes in assignable spaces is typically vinyl tile, carpet, and VAT. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 35,579 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically plaster and suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster and suspended acoustical panels. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 34,680 square feet of needlepoint acoustical ceiling tiles, 2,642 square feet of transit ceiling tiles, and 290 square feet of transit ceiling panels above doors.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam oil fired boilers that supply air handlers, fan coils, and fin tube radiators throughout the building. Cooling is provided by an air cooled ice-based thermal storage system to fan coil units and individual window units. Heating and cooling for the addition is provided by roof mounted, gas fired package units. Fresh air is supplied fan coil units and package units. Controls are low voltage electrical thermostats, individual controls on window units and pneumatics. A DDC system controls the thermal storage system and is operated remotely. The building system is not centrally monitored or controlled.

Electrical

Facility Executive Summary

Pad mounted transformers provides service to a main disconnect. Minor circuit additions have been installed to address the thermal storage system, but most of the system is original. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

The system consists of visual/audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, floor grilles and mats, multiple seating furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where four out of 71 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, electrical and a fuel oil tank.

Current Repair Cost: \$10,291,569.83**Replacement Cost:** \$16,079,373.88**FCI:** 64.00%

Facility Executive Summary

Facility: \Elementary Schools\Morningside (Imagine Foundations II Charter)

Address: 6900 Ames Street SE, Morningside, MD 20746

Attributes:

School Area	IS
Congressional	4
County Council	9
Historical Building	No
Legislative	25
Original Building	Built in 1954, 18,147 S.F.
School Addition 1	Built in 1957, 4,743 S.F.
School Addition 2	Built in 1970, 3,253 S.F.
School Addition 3	Built in 1970, 14,165 S.F.
School Board District	4
School Grade	PreK-6th

General Information:

Function:	Charter School
Gross Area:	40,308 S.F.

Year Built:

Last Renovation:

Facility Description:

Morningside Elementary School is a two-story, 40,308 square foot facility located on a 10.3-acre site close to I-495 (Capital Beltway) and Suitland Parkway in Suitland, MD. The original building was constructed in 1954 and additions were constructed in 1957 and 1970, with no major renovation performed. In 2009 interior painting was performed.

ACCESSIBILITY ISSUES

The building has curb cuts and a ramp, but lacks accessible restrooms and interior door hardware and visual strobes. Further study by an ADA Specialist is required to ensure compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal with hollow metal frames. Roofing is typically low-slope with built-up roof that has been reconstructed in 1994.

C. INTERIORS

Interior partition wall types typically include painted CMU and wall tiles. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes concrete risers and treads with wood (parquet) finishes. The interior wall finishes are typically tile. Interior paint was redone in 2009. Floor finishes in common areas is typically vinyl composition tile. Floor finishes in assignable spaces is typically carpet, which is around 2003. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 27,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers replaced in 1998 that supply fin tube radiators and terminal units throughout the building. Cooling is provided by individual window units for each classroom and a roof mounted cooling only package unit for the media center. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pole mounted transformer provides service to a main disconnect. Minor circuit additions have been installed to address the window air conditioner power, but most of the system is original. Lighting in the corridors has been upgraded but classrooms have fluorescent lamps. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on site where two out of 45 are handicap spaces with path to building entrance. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, electrical, and an underground fuel tank replaced in 1997

Current Repair Cost: \$7,601,345.43**Replacement Cost:** \$11,101,233.92**FCI:** 68.47%

Facility: \Elementary Schools\Mount Rainier Elementary

Address: 4011 32nd Street, Mount Rainier, MD 20712

Attributes:

School Area	2
Congressional	8
County Council	2
Historical Building	No
Legislative	47
Original Building	Built in 1977, 38,092 S.F.
School Addition 1	Built in 1990, 3,150 S.F.
School Board District	3
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	41,242 S.F.

Year Built:
Last Renovation:

Facility Description:

Mount Rainier Elementary School is a two-story, 41,242 square foot facility, located on a 1.3-acre site close to MD 295 (Baltimore-Washington Parkway) in Mt. Rainier, MD. The original building was constructed in 1977 and an addition was constructed in 1990 (three Modulares), with no major renovations. In 2012 the parking space was repaved and improved to increase parking spaces and also some minor upgrades were performed to the security system.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements, with the exception of the 1990 addition (3,150 S.F.). Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls and slab-on-grade. The building has a partial basement.

B. SHELL

The superstructure is steel frame and load bearing CMU walls. Floor construction is steel joists, metal deck and concrete slab, not fireproofed. Roof construction is steel joists and metal deck. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel in hollow metal frames. The windows and doors are of the original construction. The roof over the original building is typically low-slope built-up roofing with gravel ballast, which was replaced in 2007. The roof over the 1990 addition is single ply white EDPM.

C. INTERIORS

Interior partition wall types are typically painted CMU. Interior doors are generally solid core wood with hollow metal frames. Doors have bored lockset hardware. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes steel risers and treads with vinyl composition tile finishes. The interior wall finishes are typically painted on CMU. Restroom walls are glazed ceramic tile. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces is typically carpet. Floor finishes in restrooms are ceramic tile, original to construction. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels. Restrooms have painted drywall ceilings.

D. SERVICES

Conveying

Conveying equipment includes one hydraulic elevator.

Plumbing

Fixtures are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a heat exchanger that is serviced by an operating main heating boiler.

HVAC

Heating is provided by two original boilers. The units are oil-fired. Cooling is supplied by water cooled chillers and a cooling tower. The heating/cooling distribution system is ductwork and 2-pipe system using air handlers, and heat pumps. Fresh air is supplied by air handling units. Roof mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic/digital hybrid and are centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to an original (1977) main switchgear panel. Power distribution from branch panels wiring is copper. Lighting and branch wiring are typically serving recessed fluorescent, and some minor incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Facility Executive Summary

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors, etc. The system is activated by pull stations and smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator that operates on #2 fuel oil.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, audio-visual equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available in a parking lot adjacent to the site where it was repaved and improved with additional parking spaces to a total of 54 parking spaces with paths to the building entrances to comply with ADA requirements. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 6,000 gallon fuel oil tank reportedly of dual wall construction with level and leak detection systems replaced in 2007.

Current Repair Cost: \$4,337,717.39**Replacement Cost:** \$10,721,803.66**FCI:** 40.46%

Facility Description:

North Forestville Elementary School is a two-story, 57,949 square foot facility located on a 14.2-acre site close to I-95 (Capital Beltway) in Forestville, MD. The original building was constructed in 1954 and additions were constructed in 1956, 1959, 1966, and 1995 (six modulars), with no major renovation performed. A gymnasium was completed in 2008 by the Maryland National Capital Park and Planning Commission. In 2009 interior painting was redone, and in 2012 the kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The main entrance has a ramp and doors that are wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Not all areas in this two-story facility are handicap accessible, as there is no elevator or ramp to access the second floor. However, the new wing with six modular classrooms, which was added in 1995, is handicap accessible. Toilet configurations and accessories and interior graphics are generally inadequate. Further study by an ADA Specialist is required to ensure compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. The building has a basement of concrete masonry construction.

B. SHELL

The superstructure is load bearing masonry walls and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over concrete masonry unit (CMU), single panel metal windows with operable frames, and exterior doors (hollow core metal and solid core wood doors). The metal windows throughout the building are original. Many window panes have been replaced in last few years, as they are frequently broken by students. The exterior doors throughout the building are original. The exterior doors are original. Each classroom has a fire window exit. Roof construction is low-slope, built-up roof with stone ballast and flashing. The roof was replaced in 1995.

C. INTERIORS

The interior partition walls typically include painted CMU with glazed block wainscot in the corridors and drywall. Interior doors are generally solid core wood doors with hollow metal frames. All corridors have hollow metal fire doors with 1.5 hour fire ratings. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The school has three stairs with concrete risers and treads with steel frame and ceramic tile finish. Interior wall finishes are typically painted CMU and drywall. Interior paint was redone in 2009. The floor finishes are typically vinyl asbestos tiles in most classrooms, corridors, and multi-purpose room, with carpet in few classrooms and ceramic tile flooring in the restrooms. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 35,700 square feet of vinyl asbestos floor tiles. The ceiling finishes are typically suspended acoustical tiles in classrooms, teachers lounge, and hallways.

D. SERVICES**Conveying**

The building does not have an elevator as conveying equipment.

Plumbing

Fixtures are original. Domestic water distribution is galvanized steel. Sanitary waste system is cast iron. Rain water system is internal and external combination with roof drains.

HVAC

Two gas-fired boilers provide heating was renovated in 1998. Temporary window units supply cooling in the original building. The new addition has roof top units with combined cooling and heating delivered through ceiling mounted diffusers. Unit ventilators and radiators provide heating. Temporary window units supply fresh air. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and digital and are not centrally controlled by an energy management system.

Facility Executive Summary

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad-mounted transformer that delivers power to a main panel. Power distribution from branch panel wiring is typically copper. Lighting and branch wiring is typically serving suspended-mounted fluorescents. Emergency power and lighting are not present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe enunciators in corridors. The system is activated by pull stations and smoke detectors and is centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are adequately secured and cooled. The building does include an internal security system that is actuated by contact devices and is not centrally monitored.

Other Electrical Systems:

The building does not have a generator.

E. EQUIPMENT & FURNISHINGS

The building includes library, theater and stage, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The library has adequate shelving, adequate tables and chairs. The building also includes fixed casework/cabinetry, window treatment, and multiple seating furnishings (multi-purpose room).

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where there are two handicap spaces out of total 52 parking spaces. Drainage is generally adequate and is handled by surface discharge with no reported flooding. The site includes concrete sidewalks immediately adjacent to the facility was renovated in 2007, site lighting for vehicular and pedestrian night traffic. Underground fuel tank was replaced in 1997.

Current Repair Cost: \$9,628,449.80**Replacement Cost:** \$16,173,582.15**FCI:** 59.53%

General Information:

Function:	Elementary School
Gross Area:	46,152 S.F.

Year Built:
Last Renovation:

Facility Description:

Oakcrest Elementary School is a one-story, 46,152 square foot facility located on a 13.5-acre site close to I-495 (Capital Beltway) in Landover, MD. The original building was constructed in 1966 with an addition constructed in 1972. In 2009 the underground fuel tank was replaced. In 2012 the kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The facility is not in compliance with ADA requirements. The handicap ramp needs to be painted and scored. The building needs a automatic door opener at the main entry. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include interior signage, restrooms, drinking fountains, and door hardware.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade, concrete footings and foundation. The building has a crawl space of poured in place concrete construction.

B. SHELL

The superstructure is reinforced concrete masonry with face brick and glazed block and interior load bearing walls. Floor construction is slab on grade. Roof construction is a built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof replaced in 1995.

C. INTERIORS

Interior partition wall types typically include painted CMU, and glazed block. Interior doors are generally solid core doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, and toilet partitions. Interior wall finishes are typically painted CMU and glazed block. Floor finishes in common areas is typically ceramic tile, asbestos tile, vinyl tile, and carpet that is worn. Floor finishes in assignable spaces is typically vinyl tile, asbestos tile, carpet, and wood. Wood flooring on the stage was renovated in 2003. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES

Conveying

The building does not have conveying system.

Plumbing

Fixtures are original. Sinks, faucets, and other plumbing fixtures were not updated, while urinals and toilets were. Most of the water fountains are original. Domestic water distribution is mostly galvanized. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a new gas hot water heater.

HVAC

Heating is provided by two original oil/gas fired Boilers replaced in 2007. Cooling is supplied by roof top units. The heating/cooling distribution system is ductwork, 2-pipe, and air handlers. Fresh air is supplied by infiltration and air handlers. Ceiling exhaust fans are in restrooms. Controls and instrumentation are digital for cooling and pneumatic for heating and is not centrally controlled by an energy management system.

Fire Protection

The building is 5% fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers 2000 amps of power to a main panel. Power distribution wiring is typically copper. Most of the switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Illumination was updated in 2007. Emergency power is not present. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobes annunciators in common spaces and interior corridors. The system is activated by pull stations and heat sensors and is not centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are not adequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The building also includes fixed casework, window treatment, floor grilles and mats, furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking spaces available on-site where there are two handicap spaces out of the 44 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 8,000 gallon fuel oil tank of dual wall construction replaced in 2009.

Current Repair Cost: \$7,313,793.00**Replacement Cost:** \$13,014,938.10**FCI:** 56.20%

Facility: \Elementary Schools\Oakcrest Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems													
D4010		Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$4,808,542 \$190,608	\$2,505,251 \$99,307	\$7,313,793 \$289,914	Necess ary- 2-5 Yrs	Building Integrity	
D5010		Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$84,458	\$44,003	\$128,461	Necess ary- 2-5 Yrs	Capital Renewal	The main power switchgear and most of the electrical panels in hallways and classrooms are original and need update. Some panels have no capacity to expand at the time of need.
D5030		Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$132,456	\$69,010	\$201,466	Necess ary- 2-5 Yrs	Compliance	
G3060110		Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$3,231	\$1,683	\$4,914	Necess ary- 2-5 Yrs	Environmental	
C1020		Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$95,535	\$49,774	\$145,308	Necess ary- 2-5 Yrs	Capital Renewal	Interior doors are in poor condition due to worn finishes. The doors do not have fire labels. The door hardware does not meet ADA requirements. The doors are beyond useful life and need to be replaced.
C1030		Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$139,379	\$72,616	\$211,996	Necess ary- 2-5 Yrs	Capital Renewal	The millwork, shelving, toilets partitions, chalk and tack boards are in poor condition due to wear, rust, and deteriorating finishes, and should be replaced.
C3010230		Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$201,684	\$105,077	\$306,762	Necess ary- 2-5 Yrs	Appearance	The paint throughout the building is in poor condition due to stains, scuff marks, and smudges, and needs to be repainted.
C3020410		Remove 9x9/install VCT	System	Beyond Useful Life	Renew System	1	Ea.	\$579,143	\$301,734	\$880,877	Necess ary- 2-5 Yrs	Environmental	9x9 VAT tile is cracked and separating due to age.
C3020410		Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$23,874	\$12,438	\$36,312	Necess ary- 2-5 Yrs	Capital Renewal	This carpet is old, stained, torn, fading, and patched, and should be replaced.
C3020410		Concrete finish flooring	System	Beyond Useful Life	Renew System	1	Ea.	\$2,490	\$1,297	\$3,787	Necess ary- 2-5 Yrs	Building Integrity	
D2010		Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$314,757	\$163,988	\$478,745	Necess ary- 2-5 Yrs	Capital Renewal	Plumbing fixtures are mostly original and need update. Some of the fixtures are out of order and are covered with plastic back to prevent students from using them. Some sinks are chipped, cracked, and have rust. Some faucets are slow and broken.
D2020		Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$27,691	\$14,427	\$42,118	Necess ary- 2-5 Yrs	Environmental

Report Date: 08 Sep 2012

Facility Executive Summary

D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$29,999	\$15,629	\$45,628	Necess ary- 2-5 Yrs	Building Integrity	
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$42,921	\$22,362	\$65,283	Necess ary- 2-5 Yrs	Environm ental	Sanitary piping is beyond useful life, outdated, and in some areas is clogged and others leaking.
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$1,255,334	\$654,029	\$1,909,364	Necess ary- 2-5 Yrs	Capital Renewal	Most of the terminal units are original and show signs of damage. The school is in need of complete terminal units update. The school engineer stated the units control system is not operating at times and if operating the temperature is not adequate.
D3030	Cooling Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$223,376	\$116,379	\$339,754	Necess ary- 2-5 Yrs	Capital Renewal	Most of the cooling generation is provided by roof top units that have control issues and some need update.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$509,057	\$265,218	\$774,275	Necess ary- 2-5 Yrs	Capital Renewal	The heating and cooling distribution system, piping, pumps, ductwork, and fittings are mostly original and appear to be in poor condition with some of leaks and damage.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$46,614	\$24,286	\$70,899	Necess ary- 2-5 Yrs	Environm ental	The control system for each of the roof top units is located in one area and is not centralized. This limits the control for limited number of the rooms and keeping the others without of controls. Also, control for heating is outdated and mostly inoperable.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$36,922	\$19,236	\$56,158	Necess ary- 2-5 Yrs	Environm ental	
C3030210	Acoustical Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$306,449	\$159,660	\$466,109	Necess ary- 2-5 Yrs	Capital Renewal	The tile in the building is old, stained, fading and warped. The tile is beyond useful life and needs to be replaced.
E1020	Institutional Equipment	System	Beyond Useful Life	Renew System	1	Ea.	\$91,842	\$47,850	\$139,692	Necess ary- 2-5 Yrs	Deferred Maintena nce	
E1090350	Food Service Equipment, EACH	System	Beyond Useful Life	Renew System	1	Ea.	\$158,615	\$82,639	\$241,254	Necess ary- 2-5 Yrs	Deferred Maintena nce	
F1040	ADA Compliance	ADA Compliance	Inadequate	ADA Compliance	46,152	S.F.	\$70,733	\$36,852	\$107,584	Does Not Meet Current Code/St andards	ADA / Accessibility	
B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$147,225	\$76,704	\$223,929	Necess ary- 2-5 Yrs	Deferred Maintena nce	
B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$94,150	\$49,052	\$143,202	Necess ary- 2-5 Yrs	Deferred Maintena nce

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Oaklands Elementary
Address: 13710 Laurel-Bowie Road, Laurel, MD 20708

Attributes:

School Area	1
Congressional	5
County Council	1
Historical Building	No
Legislative	21
Original Building	Built in 1964, 38,950 S.F.
School Addition 1	Built in 1970, 2,477 S.F.
School Board District	1
School Grade	PreK-5th

General Information:

Function: Elementary School
Gross Area: 41,427 S.F.

Year Built:
Last Renovation:

Facility Description:

Oaklands Elementary School is a one-story, 41,427 square foot facility located on a 10-acre site less than two miles from MD Route 295 (Baltimore-Washington Parkway) in Laurel, Maryland. The original building was constructed in 1964 and an addition was constructed in 1970, with no major renovations. The kitchen grease trap was replaced in 2012

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, interior signage, restrooms, drinking fountains, and door hardware.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade with concrete footings and foundation. The building has a crawl space of cast in place concrete construction.

B. SHELL

The superstructure is concrete reinforced masonry with face brick, load bearing CMU, and glaze block walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill on built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. Interior doors are solid core wood with hollow metal frames without fire labels. Roofing is typically low-slope with built-up roof replaced in 1993.

C. INTERIORS

Interior partition wall types typically include painted CMU and glazed block wainscot. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. The interior wall finishes are typically CMU and glazed block wainscot. Floor finishes in common areas are typically vinyl asbestos tile, VCT, carpet and ceramic tile. Floor finishes in assignable spaces are typically vinyl asbestos tiles, VCT, and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 28,980 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical tile.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

The water closets in the all restrooms have been replaced with low flow flush valve units. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is primarily internal with roof drains. There are also external gutters and downspouts on portions of the building. Domestic hot water is provided by a gas fired, hot water heater, and separate storage tank. The water heater appears original to the building.

HVAC

Heating is provided by two gas and oil-fired steam boilers. Cooling is supplied by window units. The heating distribution system is a 2-pipe system to unit ventilators. Ceiling-mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are pneumatic for the heating system, and are not centrally controlled by an energy management system. The window units have their own self-contained thermostats.

Fire Protection

The building does not have a fire sprinkler system, except in the boiler room. Fire extinguishers are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from overhead to underground primary service from remote pole mounted utility transformers that delivers power to a main breaker distribution panel. Power distribution wiring is typically copper. Lighting is typically fluorescent lay-in troffers in the corridors and pendant wrap-around units in the classrooms and media center. The school lighting underwent a T-8 lamp and ballast change-out in 2007. The exterior parking and roadway lighting consists of twin bracket mounted HID luminaries on aluminum poles and round concrete base. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible signal devices in common spaces, interior corridors, etc. The fire alarm control panel is a non-addressable system, probably original to the building. The system is activated by pull stations and smoke detectors. The telephone and data systems are separate and do not include dedicated closets or cabinets. The space housing the servers is not separately air conditioned. The building includes an internal security system that is actuated by optical or combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment and food service equipment replaced in 2012. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction rooms.

G. SITE

Surface parking is available on-site where two out of 45 are handicap spaces with paths to building entrances. Drainage is generally adequate and is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 6,000 gallon underground fuel oil tank.

Current Repair Cost: \$5,891,803.79**Replacement Cost:** \$11,681,976.13**FCI:** 50.43%

Original Building	Built in 1969, 32,780 S.F.
School Addition 1	Built in 1993, 5,888 S.F.
School Addition 2	Built in 1997, 8,981 S.F.
School Board District	7
School Grade	PreK-5th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	47,649 S.F.	Last Renovation:

Facility Description:

Overlook Elementary School is a two-story, 47,649 square foot facility located on a 9-acre site close to MD Route 5 and Interstate 495 (Capital Beltway) in Temple Hills, MD. The original building was constructed in 1969 and additions were constructed in 1993 (Six Modulares) and 1997 (Eight Modulares) with no major renovation. In 2009 the underground fuel tank was replaced.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. Path of travel, exterior and interior access ramps, and vertical conveyance systems within the facility are not ADA compliant. There are no ADA compliant restroom facilities for either staff or students in the facility. Fire alarm system is audible with limited strobes. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame with masonry construction. Floor construction is slab on grade and metal pan with lightweight fill. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer with sections of pre-cast tilt-up concrete panels. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically flat or low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes steel risers and treads with tile finishes. Interior wall finishes are typically painted masonry and tile and generally. Floor finishes in common areas is typically vinyl composition tile and carpet. Floor finishes in assignable spaces is typically vinyl tile. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 25,900 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 25,600 square feet of asbestos containing needlepoint ceiling tiles.

D. SERVICES**Conveying**

The building does not have an elevator or chair lifts.

Plumbing

Fixtures are original. Domestic hot water is provided by a gas-fired hot water heater, with circulator and a storage tank. The water supply is municipal with a combination of galvanized and copper piping. Roof drains are combination internal and external.

HVAC

Heat is provided by two dual fired brick-set steam boilers that are original to the facility. Cooling is primarily window units in each classroom with a DX unit for the main office. The 1997 addition is heated and cooled by gas fired roof top package units. The 1993 addition is heated and cooled by heat pumps.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatments.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

Facility Executive Summary

G. SITE

Surface parking is available on-site where two out of 47 are handicap spaces with path to building entrances. Drainage is generally handled by area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 Gal. underground fuel oil tank replaced in 2009.

Current Repair Cost: \$7,387,024.71**Replacement Cost:** \$12,156,132.64**FCI:** 60.77%

Facility Description:

Oxon Hill Elementary School is a one-story, 63,729 square foot facility located on a 10-acre site close to I-495 (Capital Beltway) in Oxon Hill, MD. The original building was constructed in 1975, with no additions constructed or major renovation performed since that time. In 2008 the interior paint was redone and the carpet was replaced with composite tiles. In 2010 there was a POD conversion of 22,724 S.F. into classrooms.

ACCESSIBILITY ISSUES

All programs in this one-story facility are handicap accessible, with exception of those in the temporary buildings. The main entrance and the gymnasium are handicap accessible. The main entrance has curb cuts and doors wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap accessible toilet stalls are available in all of the gang restrooms and in some of the restrooms attached to the classrooms. Toilet configurations and accessories appear to be adequate. Interior graphics and/or signage for ADA compliance are inadequate or missing on exterior doors. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, sub-floor, or crawl space.

B. SHELL

The superstructure is steel frame and load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of walls of brick veneer over CMU, single pane metal windows with fixed frames, hollow core metal doors, and solid core wood doors with hollow metal frames. Exterior doors are both hollow metal and solid core wood doors. The exterior metal doors in the gymnasium and lobby are original. Roof was replaced in 2007.

C. INTERIORS

Interior partition walls typically include painted CMU walls. Interior doors are generally solid core wood doors with hollow metal frames. Interior doors were replaced in 2010. Interior fittings include chalk/tack boards, lockers, toilet accessories, handrails, and toilet partitions. The original chalkboards in some classrooms have been replaced with new white dry erase boards. Metal toilet partitions are original. The facility does not contain stair construction. Interior wall finishes are typically painted CMU walls. Interior paint was redone in 2008. Floor finishes are typically carpet, vinyl composition tiles (VCT), and ceramic tiles. Carpet was replaced with composite tile in 2008. The VCT in area-1, lobby, cafeteria, and gymnasium was installed in 2001. The ceramic tile in restrooms and kitchen are in fair condition. The overall ceiling finishes are typically suspended acoustical tiles.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Fixtures were renovated in 2010. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains and scuppers. The roof was replaced in 2007.

HVAC

Heating is provided by two 62.2 Hp gas/oil-fired boilers that are original to the building in 1975. Cooling is supplied by a water cooled chiller that was installed June 2006. The heating/cooling distribution system is a ductwork system using air handlers and unit ventilators. Fresh air is supplied by air handling units. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pole mounted transformer that delivers power to a main panel. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically serving surface-mounted fluorescents. Sixty percent of corridor lights were updated in 2007 remaining some corridor lights and classroom lights. Emergency lighting is present in the gym, corridors, and cafeteria. Exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible, without strobe, annunciators in interior corridors. The system is activated by pull stations with no smoke detectors and is centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact and is centrally monitored. There are no surveillance cameras.

Other Electrical Systems:

The building has a gas emergency generator that was installed in 2005.

E. EQUIPMENT & FURNISHINGS

The building includes library, theater and stage, detention, medical equipment, food service equipment and a kitchen grease trap. The library has adequate shelves and furniture, such as tables and chairs. The nurse room's has two beds. The stage in the multi-purpose room has curtains and lights. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in cafeteria.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where there are two handicap spaces out of total 58 parking spaces. Drainage is generally adequate and is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Facility Description:

Paint Branch Elementary School is a one-story, 59,021 square foot facility located on a 12-acre site close to US Route 1 and Paint Branch Parkway in College Park, MD. The original building was constructed in 1972, with no additions constructed or major renovations performed since that time. The exterior doors will be replaced in 2013.

ACCESSIBILITY ISSUES

The main entrance has curb cuts, ramps and doors wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap toilet stalls are available in the gang restrooms. Toilet configurations and accessories are adequate. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements. All the programs in this one-story facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a concrete footing and foundation walls. The building does not have a basement, but does have a crawl space.

B. SHELL

The superstructure of the facility is load bearing masonry walls and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow metal steel doors. The metal windows throughout the building are original. Most of the classrooms have exterior door openings. The exterior doors throughout the building are original and are scheduled for replacement in 2013. The building has low-slope, built up roof with gravel ballast. The built-up roof was replaced in 1999.

C. INTERIORS

The interior partition walls typically include painted CMU with glazed block wainscot in the corridors, drywall in two classroom pods, and folding metal partitions. The paint on the walls was painted around 2006. The interior doors, including fire doors, are generally solid core wood doors with hollow metal frames. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original black-boards. Toilet accessories, such as metal toilet partitions, are original. The interior wall finishes are typically painted CMU, drywall, and folding metal partitions. The facility has been painted around 2006. The floor finishes throughout the building are typically vinyl composition tiles (VCT) and vinyl asbestos tiles, carpet, and ceramic tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 16,500 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended acoustical tiles.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets, which were replaced in 2007. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system, except in janitors closets.

HVAC

Heating is provided by two steam gas fired boilers that supply fan coil units, fin tube radiators, and terminal units throughout the building. Cooling is provided by two air-cooled roof mounted multi-zone units and split systems with condensing unit on the roof. Four units were replaced in 2008. Distribution is a 2-pipe system to fan coil units and fin tube radiators and metal duct from the roof mounted air handlers to the spaces. Fresh air is supplied mostly by the roof mounted units. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

Facility Executive Summary

A pad mounted transformer provides service to a main disconnect. Most of the distribution system is original. Lighting has been upgraded to electronic ballast and T-8 lamps. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

The system consists of visual/audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves and furniture, such as tables/chairs. The nurse's room has two beds that original to the building age. The school has a stage with lights and curtains that are original. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site and where there are five reserved handicap spaces out of total 104 parking spaces. Drainage is generally adequate and is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

School Addition 1	Built in 2002, 11,462 S.F. (Gymnasium)
School Board District	5
School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	58,579 S.F.	Last Renovation:

Facility Description:

Patuxent Elementary School is a single-story, 58,579 square foot facility located on a 10-acre site close to MD Route 4 and US Route 301, in Upper Marlboro, MD. The original building was constructed in 1971 and one addition was constructed in 2002 (MNCPPC Gym Addition) and one renovation was performed in 2000 (POD, 19,929 S.F.).

ACCESSIBILITY ISSUES

Efforts have been made to make this facility handicap accessible. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The access ramp to the main entrance does not appear to be adequate.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing in the original building, while the lobby and the 2002 gym addition have aluminum sash with fixed thermo pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof and standing seam metal.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed block, and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails and toilet partitions. The building does not have a stair construction. Interior wall finishes are typically drywall, glazed blocks, and paint. Floor finishes in common areas are typically ceramic tile, vinyl composition tile, VAT resilient tiles, and carpet. Floor finishes in assignable spaces are typically vinyl tile, carpet, wood, ceramic tile, and VAT resilient tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster, suspended acoustical panels, and exposed deck.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets, which were installed around 2008. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater for the main building and an electric water heater in the gym. Sanitary waste system is cast iron. Rain water drain system is a combination of internal roof drains and scuppers with downspouts. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers that supply air handlers and fan coils throughout the building. Heating for the gym is provided by gas fired roof mounted package units. Cooling is provided by a roof mounted air cooled chiller, roof mounted split systems, and roof mounted, gas fired package units. Fresh air is supplied by fan coils and package units. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to a main disconnect. Additions have been installed to address the air conditioning needs and the new gym, but most of the system is original. Lighting has been upgraded to electronic ballast and T-8 lamps. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of visual/audible annunciators, manual pull stations, and heat/smoke detectors. The system was upgraded in 2005. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors and a limited CCTV system.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework furnishings and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where two out of 39 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer and electrical. The school does not have a fuel oil tank; it uses natural gas.

Current Repair Cost: \$8,891,349.68**Replacement Cost:** \$15,679,530.16**FCI:** 56.71%

School Addition 1	Built in 1994, 4,181 S.F.
School Board District	6
School Grade	PreK-6th

General Information:

Function: Elementary School

Gross Area: 64,451 S.F.

Year Built:**Last Renovation:****Facility Description:**

Phyllis Williams Elementary School is a one-story, 64,451 square foot facility located on a 10-acre site close to I-495 (Capital Beltway) and MD Route 214 in Upper Marlboro, MD. The original building was constructed in 1976 and an addition was constructed in 1994 (Four Modulares), with no major renovation. In 2008 some system level projects were completed that included interior painting, an underground fuel tank replacement, and carpet replaced with composite tile. In 2012 some minor upgrades were performed to the security system.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and a ramp, but does not have push button wall switches / automatic door openers. All the programs in this one-story facility are handicap accessible. Handicap stalls in the restrooms are adequate. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, sub-floor, or crawl space.

B. SHELL

The superstructure is load bearing masonry walls. The roof construction is metal pan with lightweight fill. The exterior enclosure is brick veneer over CMU. The exterior windows in the original building are aluminum sash with operable single-pane glazing. The exterior windows in the 1994 addition are aluminum sash with operable thermo pane glazing (insulated). Fire exit windows are not present in the original building, but are present in the modular classrooms. Only two classrooms in the original building have an exterior door. The exterior doors in the original building are hollow metal steel. The exterior doors in the 1994 addition are hollow metal steel. The roofing on the original building is typically low-slope with built-up roof with gravel ballast. It was replaced in 2002. The roofing in the 1994 addition is typically pitched with built-up roof and gravel ballast.

C. INTERIORS

The interior partition walls types typically include painted CMU, drywall (in classroom pods), and a few folding metal partition walls (in multi-purpose room). The paint was redone in 2008. The interior doors, including fire doors with one and a half hour fire ratings, are generally solid core wood doors with metal frames.

Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. Most of the classrooms have original blackboards, with the exception of a few classrooms, which have new white boards. Toilet accessories such as metal partitions in the original building are original. The facility is one story and has no stairs, chair lifts, or elevator. There is a steel stair to access the mechanical rooms.

Interior wall finishes are typically painted CMU, drywalls, and folding metal partitions. Floor finishes throughout the building are typically vinyl asbestos tiles (VAT), vinyl composition tiles (VCT), carpet, and ceramic tiles. The carpet was replaced with composite tiles in 2008. The overall ceiling finishes are typically suspended acoustical tiles.

D. Services**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original. The plumbing fixtures in the original building, such as urinals, sinks, and toilets, are original. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system except in janitors closets.

HVAC

Facility Executive Summary

Heating is provided by two steam, dual fired boilers that supply ceiling mounted single and multi-zone, 4-pipe air handlers throughout the building. Cooling is provided by an air cooled chiller with condenser on the roof. Heating and cooling for the 1994 modular classrooms is provided by gas fired roof mounted package units. Distribution is through metal duct to individual spaces. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to the main disconnect. The distribution system is original. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building has an emergency generator.

Communication and Security

The system consists of visual/audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, science lab, medical equipment, food service equipment and a kitchen grease trap. The library has book shelves and furniture, such as tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains. There is one science lab that has furniture and sinks. The building also includes fixed casework/cabinetry in a few classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in the multipurpose room.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where there are two reserved handicap spaces out of total 60 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The playground area and athletic fields are completely fenced. There is adequate separation between automotive and pedestrian traffic. Underground fuel tank was replaced in 2008.

Current Repair Cost: \$10,799,818.51**Replacement Cost:** \$17,651,401.95**FCI:** 61.18%

Facility Executive Summary**Facility:** \Elementary Schools\Phyllis E. Williams Elementary_Building (continued)**Deficiency Detail:**

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems C1030		Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$7,034,731 \$175,988	\$3,665,095 \$91,690	\$10,699,826 \$267,678	Necess ary- 2-5 Yrs	Deferred Maintena nce	Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. Most of the classrooms have old original blackboards with the exception of a few classrooms, which have new white boards. The toilet accessories such as metal partitions in the original building are old, original, rusted/stained, and in poor condition. All of the toilet accessories in the original building are beyond their useful life and need to be replaced. The toilet accessories in the 1994 addition are in good condition. The mirrors in the restrooms are in fair condition and need an upgrade.
	C3030	Ceiling Finishes	System	Beyond Useful Life	Renew System	1	Ea.	\$397,663	\$207,182	\$604,845	Necess ary- 2-5 Yrs	Deferred Maintena nce	Acoustical ceiling tiles throughout the building, including original building and modular classrooms, are old, beyond useful life, and in fair to poor condition (stained and warped due to past roof leaks and pipe condensation).
	C3020410	VAT (Resilient Flooring)	System	Beyond Useful Life	Renew System	1	Ea.	\$536,770	\$279,657	\$816,427	Necess ary- 2-5 Yrs	Deferred Maintena nce	The 12x12 vinyl asbestos tile floor finish in classrooms and corridors of the original building are beyond useful life and in fair condition (worn and cracks on some surface).
	G3060110	Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$4,219	\$2,198	\$6,417	Necess ary- 2-5 Yrs	Deferred Maintena nce

Last Renovation:

Facility Description:

Pointer Ridge Elementary School is a one-story, 61,987 square foot facility located on a 10-acre site close to US Route 301 and MD Route 214 (Central Avenue) in Bowie, MD. The original building was constructed in 1971 and an addition was constructed in 1998, with no major renovations. In 2008 the interior paint and carpet was replaced.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and doors are wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap stalls are not available in all gang restrooms. Toilet configurations and accessories are inadequate, but accessible to the handicapped. Some handicap toilet stalls are not wide enough for wheel chairs. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements. All the programs in the facility are accessible to the handicap or disabled person. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The building does not have a basement or a crawl space.

B. SHELL

The superstructure is load bearing masonry walls. Roof construction is metal pan with lightweight fill and is resting on open web steel joist roof framing. The exterior enclosure is brick veneer over CMU with glass-weld panels in courtyard. Exterior windows in the original building are aluminum sash with operable single-pane glazing. The exterior windows in the 1998 addition are aluminum sash with thermo-pane glazing. Fire exit windows are available in all classrooms. Most of the classrooms in the original building also have an exterior door. The exterior doors in the original building are hollow metal steel. The exterior doors in the 1998 addition are hollow metal steel doors. The original building has low-slope, built up roof with gravel ballast. The built-up roof was replaced in 1994. It was noted in the 2008 Assessment that the roof has moss-like growth and standing water, which suggest inadequate slope. The roofing on the 1998 addition is typically pitched, built-up roof with gravel ballast.

C. INTERIORS

Interior partition walls typically include painted CMU, drywall (wings 1 and 2), and folding metal partitions (wings 3 and 4). Interior doors, including fire doors, in the original building are generally solid core wood doors with hollow metal frames. The interior doors, including fire doors with 20 minute fire ratings, in the 1998 addition are solid core wood doors with hollow metal frames. All interior doors were replaced in 2007. Interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original black-boards. Toilet accessories such as metal toilet partitions are original. The facility does not have stair construction.

Interior wall finishes are typically painted CMU, drywalls (wings 1 and 2), and folding metal partitions (wings 3 and 4). The facility was repainted in 2008. Floor finishes throughout the building are typically vinyl composition tiles (VCT), carpet, and ceramic tiles. VAT and carpet was replaced with VCT in 2008. The overall ceiling finishes are typically suspended acoustical tiles in the original building and acoustical ceiling in the 1998 addition. Some restrooms and kitchen have drywall ceiling.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

The toilets, including flush valves, in the restrooms were replaced throughout the building with low flow toilets. Other plumbing fixtures such as urinals and sinks are original. Piping is copper and galvanized supply, cast iron drainage. Piping is mostly original. Domestic hot water is provided by a gas fired water heater.

HVAC

Facility Executive Summary

Heating is provided by two original gas fired boilers. Distribution is by a two-pipe system to fan coil units, fin tube radiators, and air handling units. Cooling is provided by a mixture of split systems, roof mounted multi-zone and single zone cooling-only air handlers. The 1998 addition is heated and cooled by gas fired, roof mounted package units. Ventilation is through the fan coils and air handler in winter and from the roof mounted systems in summer.

Fire Protection

The building does not have a sprinkler system, except in the janitor's closet.

Electrical

A pad mounted transformer provides power. Lighting is primarily fluorescent lamps and solid ballasts.

Communications and Security

The fire detection system in the main building is original. The system in the 1998 addition includes smoke detectors and visual annunciators. Telephone and data systems are not located in dedicated closets and do not have adequate cooling. Security system consists of motion sensors and door contacts.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has adequate shelves and furniture, such as tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains that are original. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in cafeteria.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are three reserved handicap spaces out of total 60 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school is approximately 85% fenced (chain link fencing around the site). Automotive and pedestrian traffic are not adequately separated.

Current Repair Cost: \$10,170,940.94**Replacement Cost:** \$17,300,189.73**FCI:** 58.79%

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Potomac Landing Elementary

Address: 12500 Fort Washington Road, Fort Washington, MD 20744

Attributes:

School Area	2
Congressional	5
County Council	8
Historical Building	No
Legislative	26
Original Building	Built in 1977, 56,300 S.F.
School Addition 1	Built in 1989, 4,296 S.F.
School Board District	9
School Grade	PreK-5th

General Information:

Function:	Elementary School
Gross Area:	60,596 S.F.

Year Built:
Last Renovation:

Facility Description:

Potomac Landing Elementary School is a one-story, 60,596 square foot facility located on a 10-acre site close to Route 210 (Indian Head Highway) in Fort Washington, MD. The original building was constructed in 1977 and an addition was constructed in 1989 (Four Modulares), with no major renovations. In 2009 the interior of the facility was repainted.

ACCESSIBILITY ISSUES

The building has some ADA compliant features, including curb cuts and ramps. Interior door hardware, restrooms, and fire detection systems are not ADA compliant. Further study by an ADA Specialist is required to ensure compliance with both Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is steel joist frame with metal pan and lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are generally steel sash with operable single-pane glazing. Windows in the 1989 addition are aluminum sash with double-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. Roofing is typically very low-slope with asphalt composition roofing which was replaced in 2006.

C. INTERIORS

Interior partition wall types typically include painted CMU in the original building and laminated gypsum board in the 1989 addition; corridor walls are FRP material. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving and toilet partitions. There are a few steps to the boiler room that include concrete risers and treads and concrete finishes with steel non-slip inserts. The interior wall finishes are typically painted CMU and generally. Interior paint was redone in 2009. Floor finishes in common areas is typically vinyl composition tile. Floor finishes in assignable spaces is typically ceramic tile and carpet. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building has standpipe and sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers that supply air handlers, fan coil units, and fin tube radiators. Cooling is provided a centrifugal water cooled chiller that has been upgraded and converted to R-134A and a new cooling tower. Distribution is a four-pipe system to multi-zone air handlers. Fresh air is supplied by air handlers. Ductwork is rectangular metal duct with rigid insulation. Controls are primarily pneumatic. The system is not centrally monitored or controlled. Individual heat pumps supply heating and cooling in the modular classroom section.

Electrical

A pad mounted transformer provides service to a main disconnect. Most of the distribution system is original. Lighting is recessed fluorescent fixtures with fluorescent lamps and hard ballasts. Exit signs are properly placed and illuminated.

Communication and Security

Facility Executive Summary

The system consists of audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are combined in a single closet but do not have independent cooling system. The security system consists of motion sensors.

Other Electrical Systems

The building has a small propane fueled emergency generator that, in the 2008 Assessment, was deemed inoperative.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where two out of 54 are handicap spaces and paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, and electrical. The school has a 10,000 gallon underground fuel oil tank replaced in 1994.

Current Repair Cost: \$10,319,473.97**Replacement Cost:** \$15,243,491.42**FCI:** 67.70%

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Potomac Landing Elementary_Original Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems													
B2020		Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$6,487,928 \$177,908	\$3,380,211 \$92,690	\$9,868,139 \$270,598	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior windows are generally in poor condition. Windows to the media center leak during rainfall.
B2030		Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$114,852	\$59,838	\$174,690	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior doors are generally old with paint peeling off, and some of them do not seal properly when closed.
C1030		Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$167,774	\$87,410	\$255,184	Necess ary- 2-5 Yrs	Deferred Maintena nce	
C3020410		Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$8,698	\$4,532	\$13,230	Necess ary- 2-5 Yrs	Deferred Maintena nce	Carpet is worn out and needs to be replaced.
C3020410		Concrete	System	Beyond Useful Life	Renew System	1	Ea.	\$4,172	\$2,174	\$6,345	Necess ary- 2-5 Yrs	Deferred Maintena nce	
C3020410		Gym Rubber Flooring	System	Beyond Useful Life	Renew System	1	Ea.	\$61,885	\$32,242	\$94,127	Necess ary- 2-5 Yrs	Deferred Maintena nce	Gym rubber flooring is beyond its useful life, but in fair condition.
C3030210		Acoustical Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$327,351	\$170,550	\$497,900	Necess ary- 2-5 Yrs	Deferred Maintena nce	Roof and pipe leaks have damage the acoustical ceilings.
D2010		Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$469,542	\$244,631	\$714,173	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2020		Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$32,654	\$17,013	\$49,667	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2040		Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$35,469	\$18,479	\$53,948	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2030		Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$51,233	\$26,692	\$77,925	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D3050		Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$1,516,159	\$789,919	\$2,306,078	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D3020		Heat Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$336,111	\$175,114	\$511,225	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D3030		Cooling Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$269,677	\$140,502	\$410,179	Necess ary- 2-5 Yrs	Deferred Maintena nce	The chiller was rebuilt and converted to R-1341. Location in a fired boiler room presents a code and safety issue. Recommend relocation as part of replacement project.
D3040		Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$614,796	\$320,309	\$935,105	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D3060		Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$56,300	\$29,332	\$85,632	Necess ary- 2-5 Yrs	Deferred Maintena nce

General Information:

Function: Elementary School
Gross Area: 41,337 S.F.

Year Built:
Last Renovation:

Facility Description:

Princeton Elementary School is a one-story, 41,337 square foot facility located on a 12.1-acre site close to the Allentown Road and MD Route 5 (Branch Avenue) in Suitland, MD. The original building was constructed in 1960 and multiple additions were constructed in 1963, 1971, and 1997, with no major renovation. In 2008 food service equipment was installed/replaced. In 2010 some interior painting was performed in the facility.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements, with exception of the 1997 addition, which has handicap accessible restrooms and toilet stalls. Path to main entrance has stairs, but no ramp. There are stairs, but no ramp to the multi-purpose room, which is on a lower level than the main hallway. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. The building does not have a basement, but does have a crawl space of CMU construction.

B. SHELL

The superstructure is load bearing masonry walls and open web steel joist roof framing. Floor construction is cast-in-place concrete. Roof construction is Tectum panels. The exterior enclosure is comprised of walls of brick veneer over CMU and painted aluminum storefront panels with glazing. Exterior windows are steel sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof. Noted in the 2008 Assessment, roof slope allowed for standing water on the roof. Roof replacement over the pre-kindergarten side of school was replaced in 2007.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed block wainscot in the corridors, restrooms and kitchen, and drywall. Interior doors are generally hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes steel risers and treads with tile and concrete finishes. The interior wall finishes are typically painted CMU, plaster and wood paneling. Floor finishes in common areas is typically vinyl composition tile and ceramic tile. Floor finishes in assignable spaces is typically vinyl tile and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 27,800 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical tiles. Ceiling finishes in assignable areas are typically suspended acoustical tiles, two-foot wide strip suspended acoustical panels, and plaster.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are mostly original. Sinks, faucets, urinals, toilets, and other plumbing fixtures were not updated. Most of the water fountains are original. Domestic water distribution is a mixture of copper and galvanized. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater located in the boiler room.

HVAC

Heating is provided by two gas/oil fired Boilers, which were installed in 2000. Cooling is supplied by window units in the original building, and roof top units in the small addition. The heating/cooling distribution system is ductwork and a 2-pipe system using radiators and unit ventilators. The distribution system is original. Fresh air is supplied by infiltration. Controls and instrumentation are pneumatic and not centrally controlled by an energy management system.

Fire Protection

Facility Executive Summary

The building does not have fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pole mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors. The system is activated by pull stations and is centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are adequately secured and cooled. The building does not include an internal security system.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and two kitchen grease traps. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there is one out of 41 is handicap space with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic, and there is no lighting in the back of the school. The school has an 8,000 gallon fuel oil tank replaced in 1989.

Current Repair Cost: \$6,554,597.83**Replacement Cost:** \$11,618,814.43**FCI:** 56.41%

Facility: \Elementary Schools\Princeton Elementary_Original Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$4,231,297 \$87,068	\$2,204,506 \$45,362	\$6,435,802 \$132,430	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior windows are in poor condition. They leak in rooms 107 and 110 when it rains, do not operate properly in rooms 103 and 105, and some are rusting.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$64,778	\$33,749	\$98,528	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior doors are in poor condition; they do not seal tightly, especially in the cafeteria and boiler room.
	C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$65,475	\$34,112	\$99,587	Necess ary- 2-5 Yrs	Deferred Maintena nce	Some interior doors do not open and close properly and some of the hardware does not work properly.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$95,774	\$49,898	\$145,673	Necess ary- 2-5 Yrs	Deferred Maintena nce	The metal toilet partitions in the boys restrooms are damaged.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$105,347	\$54,886	\$160,232	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3010230	Tile	System	Beyond Useful Life	Renew System	1	Ea.	\$6,552	\$3,413	\$9,965	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3020410	VCT	System	Beyond Useful Life	Renew System	1	Ea.	\$192,593	\$100,341	\$292,934	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$164,035	\$85,462	\$249,497	Necess ary- 2-5 Yrs	Deferred Maintena nce	Carpet is in fair to poor condition due to wear and tear.
	C3020410	Concrete	System	Beyond Useful Life	Renew System	1	Ea.	\$79,057	\$41,189	\$120,246	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$266,427	\$138,808	\$405,235	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most of the plumbing fixtures are original, beyond useful life, and in poor condition.
	D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$18,807	\$9,798	\$28,605	Necess ary- 2-5 Yrs	Deferred Maintena nce	Piping for both the hot and cold water is mostly original. The distribution system was not updated and needs update. Some of the faucets had low pressure that could indicate line blockage.
	D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$20,548	\$10,705	\$31,253	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$29,255	\$15,242	\$44,496	Necess ary- 2-5 Yrs	Deferred Maintena nce	The sanitary piping is outdated and leaking in some areas.
	D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$861,272	\$448,723	\$1,309,994	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most of the terminal units are original and show signs of damage. The school is in need of complete terminal units update.

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$349,315	\$181,993	\$531,308	Necess ary- 2-5 Yrs	Deferred Maintena nce	The heating and cooling distribution system, piping, pumps, ductwork, and fittings appear to be in poor condition with some of leaks and damage.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$31,693	\$16,512	\$48,204	Necess ary- 2-5 Yrs	Deferred Maintena nce	HVAC control system is original and has functional problems. All rooms in the original building have control problems. The principle has to open and close the windows in her office to regulate the temperature.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$25,424	\$13,246	\$38,669	Necess ary- 2-5 Yrs	Deferred Maintena nce	Since most of the HVAC system is original, some system balance and testing is needed. Ventilation is poor in restrooms, some class rooms, and in some hallways.
D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$130,601	\$68,043	\$198,645	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5020	Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$455,885	\$237,516	\$693,402	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most lighting is outdated and in some cases not operating. Many of the light covers are stained and broken. Some classrooms need ballasts and wiring.
D5030	Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$90,550	\$47,177	\$137,727	Necess ary- 2-5 Yrs	Deferred Maintena nce	Security and communication is mostly original and outdated. The principle and school engineer indicated that the school has no cameras and are needed in different areas.
G3060110	Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$2,438	\$1,270	\$3,708	Necess ary- 2-5 Yrs	Deferred Maintena nce	The system is original and could use an update.
C3030110	Drywall Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$6,813	\$3,550	\$10,363	Necess ary- 2-5 Yrs	Deferred Maintena nce	
C3030210	Acoustical Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$178,802	\$93,156	\$271,958	Necess ary- 2-5 Yrs	Deferred Maintena nce	The 1x1 suspended acoustical tiles are stained and out of alignment in corridors and some classrooms.
E1020	Institutional Equipment	System	Beyond Useful Life	Renew System	1	Ea.	\$63,037	\$32,842	\$95,879	Necess ary- 2-5 Yrs	Deferred Maintena nce

General Information:

Function:	Elementary School	Year Built:
Gross Area:	68,546 S.F.	Last Renovation:

Facility Description:

Ridgecrest Elementary School is a multi-story, 68,546 square foot facility located on a 7.6-acre site close to New Hampshire Avenue in Hyattsville, MD. The original building was constructed in 1954 and additions were constructed in 1970 and 2002, with major renovation done in 1970. In 2009 the roof covering was replaced.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements, with the exception of the 2002 addition. The original building and 1970 addition were not constructed with the handicapped in mind. The 2002 addition appears to be fully accessible, with ADA-compliant signage, door hardware, restrooms, hand railing, and entrances. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements for the original and the 1970 addition.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building does not have a basement, cellar or sub-floor, and there are no indications of water infiltration.

B. SHELL

The superstructure is steel frame, concrete frame, and load bearing stud walls. Floor construction is slab on grade and metal pan with lightweight fill. Roof construction is metal pan with lightweight fill, concrete. The exterior enclosure is comprised of walls of brick veneer. Exterior windows are aluminum and steel sash with operable single-pane glazing. Exterior doors are hollow metal steel, solid core wood, and aluminum. Roofing is typically low-slope with built-up roof replaced in 2009.

C. INTERIORS

Interior partition wall types typically include painted CMU and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes steel and concrete risers and treads with tile finishes. The interior wall finishes are typically drywall and painted CMU. Floor finishes in common areas are typically vinyl composition tiles and vinyl asbestos tiles. Floor finishes in assignable spaces are typically carpet. VAT floor tile was replaced in 2008. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. BUILDING SERVICES

Conveying Systems

There is one hydraulic elevator.

Mechanical/Plumbing

The school has two hot water boilers. Each of the boilers uses natural gas as primary fuel. Boilers were renovated in 1996. The system is a 2-pipe distribution system with individual controls in each classroom. Heating is provided by hot water through unit ventilators. Air conditioning is provided in the original building and Addition 1 by package window units, estimated of the year 2000. Addition 2 has two package rooftop units, which were installed in 2002. Exhaust/ventilation is by rooftop exhaust fans. Plumbing fixtures in the original school flush valve water closets, renewed in 1987. Addition 1 also has flush valve, which was renewed in 1995. Addition 2 has original to the building, which was constructed in 2002.

Electrical

The incoming electrical service is supplied by incoming utility primary power to a vaulted dry-type transformer in the school building. The MDP, located in the original building, is a board, which was installed in January 1970. Lighting is primarily fluorescent, recessed in corridors, and pendent in classrooms. Original building was renewed in 1987 and Addition 1 was renewed in 2000.

Fire Protection/Life Safety Systems

The main fire alarm system is an addressable system. The FACP is located in the boiler room; no annunciator in administration. There are audible and strobe signal devices in the corridors. There is a centrally monitored security system, intercom, and phone/data system.

E. EQUIPMENT & FURNISHINGS

Facility Executive Summary

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment. The building also includes fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction, pre-engineered construction.

G. SITE

Surface parking is available on site where two out of 50 are handicap spaces with path to building entrances. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The water supply is provided from the campus distribution system. Underground fuel tank was replaced in 1995

School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	64,800 S.F.	Last Renovation:

Facility Description:

Riverdale Elementary School is a two-story, 64,800 square foot facility located on a 3.1-acre site close to MD Route 295 (Baltimore-Washington Parkway) in Riverdale, MD. The original building was constructed in 1978, with no additions constructed or major renovations performed since that time.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and wide enough doors for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap toilet stalls are available in only one gang restroom on the second floor. Toilet configurations and accessories are inadequate. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements. The facility has an interior ramp to access the second floor. All major parts of the facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls. The building does not have a basement, but does have a crawl space.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over concrete masonry unit (CMU), single pane metal windows with operable frames, and hollow metal steel doors. Most of the classrooms have a fire window exits. The metal exterior doors throughout the building are original. Some exterior doors (in the boiler room and kitchen) were replaced. The door hardware is beyond its useful life. All metal doors have panic hardware. The original building has low-slope built up roof with gravel ballast, which was replaced in 1998.

C. INTERIORS

Interior partition walls typically include painted concrete masonry unit (CMU) and folding metal partition walls (in pods). Interior doors are generally hollow core metal doors. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards, smart boards, and electronic white boards. Toilet accessories, such as metal toilet partitions, are original.

Interior wall finishes are typically painted CMU and folding metal partitions. Floor finishes throughout the building are typically vinyl asbestos tiles (tan and gray) or VAT, vinyl composition tiles (VCT), carpet, and ceramic tiles. The overall ceiling finishes are typically suspended acoustical tiles.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original. Sinks, faucets and other plumbing fixtures were not upgraded from their original state. Most of the water fountains are original. Domestic water distribution is generally copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains.

HVAC

Heating is provided by two oil-fired boilers. Cooling is supplied by a water-cooled chiller and a cooling tower. The heating/cooling distribution system is a ductwork and 2-pipe system using air handlers. Fresh air is supplied by infiltration and air handling units. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad-mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Several switch gears are original. Lighting and branch wiring is serving a combination of recessed and pendent-mounted fluorescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of a main panel in the boiler room and audible annunciators in common spaces and interior corridors. The system is activated by pull stations and smoke detectors and is centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves and furniture, such as tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains that are original to the building age. The building also includes fixed casework/cabinetry in the classrooms, window treatment and multiple seating furnishings (folding chairs and tables) in the multi-purpose room.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where there are two reserved handicap spaces out of total 35 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Current Repair Cost: \$11,196,590.88**Replacement Cost:** \$17,583,672.05**FCI:** 63.68%

Facility Executive Summary

Facility: \Elementary Schools\Robert Frost Elementary

Address: 6419 85th Avenue, New Carrollton, MD 20784

Attributes:

School Area	1
Congressional	5
County Council	3
Historical Building	No
Legislative	22
Original Building	Built in 1968, 48,852 S.F.
School Board District	2
School Grade	PreK-5th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	48,852 S.F.	Last Renovation:

Facility Description:

Robert Frost Elementary School is a two-story, 48,852 square foot facility located on a 6.6-acre site close to I-495 (Capital Beltway) in New Carrollton, MD. The original building was constructed in 1968, with no additions constructed or major renovations performed since that time.

ACCESSIBILITY ISSUES

The main entrance has curb cuts, ramps, and doors wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. Handicap toilet stalls are missing in the gang restrooms. Toilet configurations and accessories are inadequate and do not comply with ADA requirements. Interior graphics and/or signage are inadequate or missing and do not comply with ADA requirements. Not all the programs in the facility are handicap accessible, especially the programs on the second floor. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, crawl space, or sub-floor.

B. SHELL

The superstructure is load bearing masonry walls and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow metal steel doors. The metal windows throughout the building are original. All classrooms on the second floor have a fire window exit. All the classrooms on the first floor have exterior door openings. The exterior doors throughout the building are original. Noted in the 2008 Assessment, some metal exterior doors do not close properly & the roof has signs of standing water. The building has low-slope, built up roof with gravel ballast. The built-up roof was replaced in 2000.

C. INTERIORS

The interior partition walls typically include painted CMU (with glazed block wainscot in the gymnasium), folding metal partitions (in multi-purpose room), and metal panels (in the corridors). The interior doors, including fire doors, are generally solid core wood doors with hollow metal frames.

Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original blackboards. Toilet accessories such as metal toilet partitions are original. The facility has two steel stair cases (concrete treads and risers with steel frame and vinyl tile floor finish) that are original. There is a metal ladder to access the roof hatch.

The interior wall finishes are typically painted CMU and metal panels. The floor finishes throughout the building are typically vinyl asbestos tiles (VAT), carpet, and ceramic tiles. There is VAT floor finishes in the classrooms, gymnasium, multi-purpose room, and corridors. There are ceramic tiles in the restrooms and kitchen area. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 35,450 square feet of vinyl asbestos tiles.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Fixtures are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal and external with roof drains and downspouts.

HVAC

Heating and cooling system consist of roof top units that were replaced in 2008. The heating/cooling distribution system is a ductwork system. Fresh air is supplied by air handling units. Ceiling-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Facility Executive Summary

Electrical

The electrical service is fed from a pole mounted transformers that delivers power to a main panel. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving surface-mounted fluorescents. Emergency power and lighting are not present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in interior corridors, gym, and kitchen (13 stations in total). The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves, furniture; such as tables and chairs (some furniture is original from 1968). The nurse's room has two beds that are original to the building age. The school has a stage with lights and curtains (replaced in 2006). The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in the multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are three reserved handicap spaces out of total 61 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

School Grade	PreK-8th

General Information:

Function:	Elementary School
Gross Area:	133,631 S.F.

Year Built:
Last Renovation:

Facility Description:

Robert Goddard Middle School is a two-story, 133,631 square foot facility located on a 20.3-acre site close to MD Route 564 and I-495 (Capital Beltway) in Seabrook, MD. The original building was constructed in 1964 and an addition was constructed in 1966, with no major renovations, except for FY03 FSRP Boiler Replacement, which was performed in 2004. In 2012 a kitchen grease trap was replaced, and the parking lot was improved.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements, although efforts have been made. A ramp to the main entrance was installed; however, the main entrance lacks hardware to accommodate handicapped accessibility. There is a 750 lb chair lift for access to the second floor. Restrooms are not fully handicapped accessible and all interior door hardware needs to be upgraded. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade for the first floor and Tectum board with lightweight fill on the second floor and the attic. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing in poor condition. Exterior doors are hollow metal steel in poor condition as well. Roofing in most areas is typically pitched with built-up roof.

C. INTERIORS

Interior partition walls typically include painted CMU. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, lockers, toilet accessories, shelving, and toilet partitions. Stair construction includes concrete risers and treads with steel and tile finishes. Interior wall finishes are typically tile and glazed blocks. Floor finishes in common areas are typically terrazzo, ceramic tile, vinyl composition tile, carpet, wood gym floor and vinyl asbestos tiles. Floor finishes in assignable spaces are typically vinyl tile, carpet and vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically plaster and suspended acoustical panels.

D. SERVICES

Conveying

The building has a chair lift. At time of the 2008 Assessment it needed servicing.

Plumbing

Fixtures are original, except for the low flow toilets, which were installed in 2007. Domestic water distribution is original and consists of copper and galvanized piping. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains, gutters, and downspouts. The building does not have a sprinkler system, except in mechanical rooms and janitor's closets.

HVAC

Heating is provided by two steam, oil fired boilers, which were replaced in 2003 and supply fin tube radiators, air handlers and terminal units throughout the building. Cooling is provided by individual window units for each classroom and centrifugal chiller with a cooling tower for the cafeteria and main office. The chiller was replaced in 1999, located in the boiler room. Fresh air is supplied mostly by air handlers and fan coils during the heating season and by infiltration during the cooling season. Controls are low voltage electrical thermostats, individual controls on window units, and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to a main disconnect that was upgraded in 1998 to accommodate the window unit loads. Lighting in has been upgraded with electronic ballasts and T-8 lamps. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building has an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), audio-visual, laboratory, medical equipment, food service equipment and a kitchen grease trap was replaced in 2012. The building also includes fixed casework and floor grilles, mats and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site and was improved to 155 parking spaces with paths to the building entrances. Drainage is generally handled by surface drainage, the site includes concrete sidewalks, site lighting and utility lines including water, sewer, and electrical. The fuel oil tank was replaced in 1998.

Last Renovation:

Facility Description:

Rockledge Elementary School is a one-story, 56,252 square foot facility located on a 10-acre site close to I-495 (Capital Beltway) in Bowie, MD. The original building was constructed in 1968 with no additions constructed or major renovations performed since that time.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, interior signage, drinking fountains, and door hardware.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings and foundation walls. The building has a crawl space of cast in place concrete construction.

B. SHELL

The superstructure is load bearing masonry walls. Floor construction is slab on grade. Roof construction is metal pan and insulation boards with a built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. Exterior doors and deteriorated storefront was replaced in 2007. Roofing is typically low-slope with built-up roof replaced in 1994.

C. INTERIORS

Interior construction partition wall types typically include painted CMU with a glazed block wainscot. There are metal stud and drywall partitions in the classrooms at the rear of the building. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, and toilet partitions. The interior wall finishes are typically painted CMU and glazed block. Floor finishes in common areas are typically VCT, carpet, ceramic tile, and wood. Floor finishes in assignable spaces are typically carpet, VCT, and quarry tile in the kitchen. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 44,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended Tectum tiles. Ceiling finishes in assignable areas are typically suspended Tectum tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 750 square feet of asbestos containing stucco ceilings.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

The plumbing fixtures are primarily with flush valve water closets. The water closets and urinals have been renewed around 2007. The lavatories are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas fired hot water heater, storage tank and re-circulating pump.

HVAC

Heating is provided by two oil-fired hot water boilers. Cooling is supplied by split DX systems with rooftop heat pump condensing units that are newer than original. The heating distribution system is a 2-pipe system to unit ventilators in classrooms. There are also two suspended air handling, heat only, units in the gym. Ceiling-mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are pneumatic. The system is not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted utility transformer that delivers power to a main switch and distribution, switchboard. Power distribution wiring is typically copper. Lighting is typically fluorescent lay-in troffers in the corridors and box fixtures plus surface tandem wrap around fluorescent fixtures in the classrooms. The gym has box fixtures with T-8 lamps and wire guards. The school underwent a lamp and ballast change-out. The exterior parking and roadway lighting consists of bracket mounted HID luminaries on aluminum poles. The pole fixture bases are below ground level. Emergency lighting is present and exit signs are present at exit doors and are typically illuminated.

Communications and Security

The fire alarm system consists of audible devices in common spaces, interior corridors, etc. The fire alarm control panel (FACP) is a non-addressable system, which is probably original to the building's construction. The system is activated by pull stations and smoke detectors. The telephone and data systems are separate and do not include dedicated closets or cabinets. The space containing the server rack is not separately air conditioned. The building includes an internal security system that is actuated by optical or combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and kitchen grease trap. The building also includes fixed casework, window treatment, floor grilles and mats, and furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking spaces available on-site where one out of 78 are handicap spaces and paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon underground fuel oil tank.

Gross Area:	56,588 S.F.

Year Built:

Last Renovation:

Facility Description:

Rogers Heights Elementary School is a partial two-story, 56,588 square foot facility located on a 7.5-acre site near MD Route 295 (Baltimore-Washington Parkway) in Bladensburg, MD. The original building was constructed in 1959, additions were constructed in 1961, 1978, 1989, and 1997, and major renovation was performed in 1978. In 2012 some minor projects were performed that included kitchen grease trap replacement and security system upgrades.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements with the exception of the 1989 and 1997 additions. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on concrete footings and foundation walls with a partial slab-on-grade and partial suspended slab over crawl space. Noted in the 2008 Assessment, there was moisture accumulation in the bottom of the crawl space. The building does not have a basement.

B. SHELL

The superstructure is steel frame and load bearing CMU walls. First floor construction is suspended slab on load bearing CMU foundation walls. Second floor construction is steel joists, metal deck and concrete slab, not fireproofed. Roof construction is steel joists and cementitious fiber (Tectum) deck, with no bulb tees. The single story portion of the exterior enclosure is comprised of walls of brick veneer over CMU. The two story portion is standing seam metal. Exterior windows are aluminum sash with fixed and operable single-pane glazing except in the latter date additions, which are thermal pane glazing. Exterior doors are hollow metal steel in hollow metal frames. The windows and doors are of the original. Roofing is typically low-slope, built-up roofing with gravel ballast, which was replaced in 2007.

C. INTERIORS

Interior partition wall types are typically painted CMU. The 1989 addition has modular wall panels with vinyl wall covering. Interior doors are generally solid core wood with hollow metal frames. Doors have bored lockset hardware. The accesses to exit (corridor) doors are not fire labeled, except in the 1989 and 1997 additions. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails, and toilet partitions. Stair construction includes steel risers and treads with vinyl composition tile finishes and aluminum tread nosing. The interior wall finishes are typically paint on CMU. Restroom and kitchen walls are glazed CMU wainscot and painted CMU. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces is typically VCT and carpet. Floor finishes in Restrooms and kitchen are ceramic tile, original to construction. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels. Restrooms and kitchen have painted drywall ceilings.

D. SERVICES

Conveying

The building does include conveying equipment. Conveying equipment includes one Dover hydraulic elevator lift.

Plumbing

Fixtures are original. Toilet stalls are updated to be ADA compliant. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is combination with roof drains and scuppers. Domestic hot water is provided by a gas-fired hot water heater with storage and circulators, which were replaced in 2004.

HVAC

Facility Executive Summary

Heating is provided by two oil-fired, w/gas pilot hot water boilers, which were installed in 1958. Cooling is supplied by two air cooled chiller units, which were installed in 2006 and two roof-top units. There are five roof mounted package units on the 1997 addition. The heating/cooling distribution system is a 2-pipe system using fan-coil and fan-coil/unit-ventilators. There is an AHU installed in the gym. Fresh air is supplied by air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic, hybrid, and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors. Fire alarm system was replaced in 2006. Partial upgrades were done to the security system in 2012

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel replaced in 1970. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically 3-wire grounded serving recessed and surface-mounted fluorescent and some incandescent. Emergency power and battery lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system is a Standard Electric and original and hybrid upgraded system that consists of audible/strobe annunciators in common spaces, interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is not centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator that, at the time of the 2008 Assessment, was reportedly out of service.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, audio-visual equipment, food service equipment and a kitchen grease trap was replaced in 2012. The building also includes fixed casework and window treatment.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available in a parking lot adjacent to the site where five out of 56 are handicap spaces and path to building entrance. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The front parking lot has dual round HID fixtures on aluminum poles. The school has an 8,000 gallon fuel oil tank replaced in 1998.

School Board District	9
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	56,252 S.F.

Year Built:
Last Renovation:

Facility Description:

Rose Valley Elementary School is a one-story, 56,252 square foot facility located on a 10.1-acre site close to Route 210 (Indian Head Highway) in Fort Washington, MD. The original building was constructed in 1968, with no additions constructed or major renovations performed since that time.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. Entrance ramp lacks change of texture and color, there is no entrance door opening mechanism for the disabled and interior signage and graphics appear to be inadequate. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor construction.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel replaced in 2007 including deteriorated storefronts. Roofing is typically low-slope with built-up roof replaced in 1995.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed CMU, and exposed brick. Interior doors are generally solid core/hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards toilet accessories, shelving, and toilet partitions. The building is single story and the only stair construction is in the boiler room, which includes steel treads with steel finishes. Interior wall finishes were repainted in 2008. Floor finishes in common areas is typically ceramic tile, vinyl asbestos tiles. Floor finishes in assignable spaces are typically vinyl tile, carpet and wood. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 48,835 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically plaster and suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 850 square feet of sprayed on fibrous asbestos materials.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets. Domestic water distribution is original and consists of copper and galvanized piping. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers that supply fin tube radiators, heat-only air handlers, and terminal units throughout the building. Cooling is provided by individual window units for each classroom and roof mounted cooling-only package units for the media center and main office. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units, and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pole mounted transformer provides service to a main disconnect. Minor circuit additions have been installed to address the window air conditioner power, but most of the system is original. Lighting has been upgraded. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

Facility Executive Summary

The system consists of audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets. The server room has an independent cooling system. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatment furnishings.

F. Special Construction

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where four out of 38 are handicap spaces and path to building entrance. Drainage is generally handled by surface drainage. The site includes concrete sidewalks, site lighting and utility lines, including water, sewer, and electrical.

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Samuel Chase Elementary

Address: 5700 Fisher Road, Temple Hills, MD 20748

Attributes:

School Area	2
Congressional	4
County Council	8
Historical Building	No
Legislative	26
Original Building	Built in 1962, 23,581 S.F.
School Addition 1	Built in 1967, 19,043 S.F.
School Board District	8
School Grade	PreK-5th

General Information:

Function: Elementary School
Gross Area: 42,624 S.F.

Year Built:
Last Renovation:

Facility Description:

Samuel Chase Elementary School is a two-story, 42,624 square foot facility located on a 10.7-acre site close to Interstate 495 (Capital Beltway) in Temple Hills, MD. The original building was constructed in 1962 and an addition was constructed in 1967, with no major renovation. Roof replacement is currently planned for 2013. A major renovation and addition for this school is currently in design with construction planned for 2015 to 2017.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. Access ramps seem to be too narrow and do not have change of texture and color and signage and handrails in the restrooms are inadequate. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or sub-floor, but does have a crawl space of CMU construction.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically very low-slope with built-up roof scheduled for replacement in 2013.

C. INTERIORS

Interior partition wall types typically include painted CMU, movable wall partitions, and glazed block. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, and toilet partitions. Stair construction includes concrete risers and treads with steel/parquet finishes. The interior wall finishes are typically paint on CMU and glazed block and generally. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces are typically vinyl tile, carpet and terrazzo. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 32,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas is typically plaster. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 17,800 square feet of needlepoint tile, 2,700 square feet of random drilled tile, and 1,650 square feet of decorative ceiling coating, all of which are asbestos containing materials.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam dual fired boilers (replaced in 2007) that supply fan coil units and fin tube radiators throughout the building. As noted in the 2008 Assessment, there are leaks in the piping, particularly in the addition and condensate return system. Cooling is provided by individual window units for each classroom. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats, individual controls on window units and pneumatic. The system is not centrally monitored or controlled.

Electrical

Facility Executive Summary

A pole mounted transformer provides service to a main disconnect. Minor circuit additions have been installed to address the window air conditioner power, but most of the system is original. Lighting includes original lamps with hard ballasts. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

The system consists of audible annunciators, manual pull stations, and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework and window treatments.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where four out of 48 are handicap spaces and path to building entrance. Drainage is generally handled by surface drainage. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, electrical and an underground fuel tank replaced in 1990.

Current Repair Cost: \$8,148,399.46**Replacement Cost:** \$12,032,586.54**FCI:** 67.72%

General Information:

Function:	Elementary School
Gross Area:	39,704 S.F.

Year Built:**Last Renovation:****Facility Description:**

Seabrook Elementary School is a one-story, 39,704 square foot facility located on a 6-acre site close to I-495 (Capital Beltway) in Seabrook, MD. The original building was constructed in 1953 and additions were constructed in 1962, 1964, and 1967 (Sp. Ed. 9 rm Diag. Wing), with no major renovations. In 2010 some minor projects were performed that included ceiling tiles replacement, and replacement/refinish of doors and woodwork.

ACCESSIBILITY ISSUES

The main entrance to this facility appears to be handicap accessible. There is one handicap accessible toilet stall in the boy's and one girl's gang restrooms. The remainder of the facility is not generally in compliance with ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement.

B. SHELL

The superstructure is steel frame with fabricated metal and masonry panels. Floor construction is slab on grade. Roof construction is metal pan supported by light weight steel girder. The exterior enclosure is comprised of walls of brick veneer over CMU and pre-fabricated metal window-wall panels in addition and the MPR. The MPR has fiberglass panels for architectural-styled day lighting. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof installed in 1997.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors, with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving, and toilet partitions. The interior wall finishes are typically painted CMU. Floor finishes in common areas are typically vinyl composition tile and some carpet. Floor finishes in assignable spaces are typically vinyl tile and carpet. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels in the original sections with deck mounted Tectum panels above the roof joists in the addition sections.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Fixtures are original, except for the low flow toilets. Domestic water distribution is a mix of copper and galvanized steel. Sanitary waste system is a mix of cast iron and plastic. Rain water system is internal and external combination with roof drains and scuppers.

HVAC

Heating is provided by four boilers - two fuel-oil fired steam boilers installed in 2002; one fuel-oil fired steam boiler; and one fuel-oil fired steam boiler, installed in 1995. Cooling is supplied by rooftop package units and window units. The heating/cooling distribution system is a mixture of ductwork and two-pipe system using fan coil units and unit ventilators. Fresh air is supplied by infiltration. Ceiling and wall-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Facility Executive Summary

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted and pendent-mounted fluorescent and incandescent. Lighting upgrade was completed in 2007. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common spaces, balconies, interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are combined and include dedicated closets or cabinets that are inadequately secured and cooled. The building does not include an internal security system.

Other Electrical Systems

The building does not have emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library (media center), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where two out of 52 are handicap spaces with path to building entrance. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system. Underground fuel tank was replaced in 2002.

Current Repair Cost: \$6,581,887.67**Replacement Cost:** \$10,870,133.82**FCI:** 60.55%

Year Built:
Last Renovation:

Facility Description:

Seat Pleasant Elementary School is a two-story, 42,888 square foot facility located on a 4.4-acre site close to MD Route 704 (Martin Luther King, Jr. Highway) in Capital Heights, MD. The original building was constructed in 1971 and no additions have been constructed or major renovations performed since that time. In 2012 a kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar, or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade on the first floor and metal pan with lightweight fill on the second floor. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of pre-cast tilt-up concrete panels etc. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed block wainscot, and drywall. Interior doors are generally a combination of solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving and toilet partitions. Stair construction includes concrete risers and treads with steel and tile finishes. The interior wall finishes are typically drywall, tile, and glazed blocks. Floor finishes in common areas are typically ceramic tile, vinyl composition tile, and carpet. Floor finishes in assignable spaces is typically vinyl tile. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster and suspended acoustical panels.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic hot water is provided by a gas fired water heater. Domestic water distribution is original and consists of copper and galvanized piping. Sanitary waste system is cast iron. Rain water drain system is a combination of roof drains, scuppers, and downspouts. The building does not have a sprinkler system.

HVAC

Heating is provided by two steam gas fired boilers that supply fin tube radiators and terminal units throughout the building. Cooling is provided by an old centrifugal chiller that has been converted to R-123 and a cooling tower. At the time of the 2008 Assessment it was noted that there were safety and code issues resultant from location of the chiller and boiler. Distribution is by a 2-pipe system. There are mezzanine rooms for air handlers. Fresh air is supplied mostly by infiltration. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to a main disconnect. Additions have been installed to address the addition of air conditioning, but most of the distribution system is original. Lighting has not been upgraded and most fixtures have original fluorescent lamps, hard ballasts. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building has a small emergency generator.

Communication and Security

The system consists of audible visual/annunciators, manual pull stations, and heat/smoke detectors. The system was replaced in 2000. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

Facility Executive Summary

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap was replaced in 2012. The building also includes fixed casework and window treatment.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where three out of 48 are handicap spaces with paths to the building entrances. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, and electrical. The school does not have a fuel oil tank; it uses natural gas.

Current Repair Cost: \$8,142,715.24**Replacement Cost:** \$12,094,616.21**FCI:** 67.33%

County Council	9
Historical Building	No
Legislative	25
Original Building	Built in 1966, 37,225 S.F.
School Board District	7
School Grade	PreK-6th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	37,225 S.F.	Last Renovation:

Facility Description:

Skyline Elementary School is a one-story, 37,225 square foot facility located on a 10-acre site close to the Interstate 495 (Capital Beltway) in Suitland, MD. The original building was constructed in 1966 and has had no additions constructed or major renovation performed, with the exception of a POD Conversion into classrooms in 2007.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The school has one handicap parking space, but it is not marked. Restrooms in the teachers lounge are not handicap accessible, but reportedly need to be. Railing has been installed in some toilet stalls, but the stalls are not wide enough for wheelchair access. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade foundation. The building does not have a basement or crawl space.

B. SHELL

The superstructure is load bearing masonry walls. Floor construction is slab on grade. Roof construction is Tectum panels and open web steel joist roof framing. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with fixed single-pane glazing. Exterior doors are hollow metal steel and solid core wood. Roofing is typically low-slope, built-up roof with standing seam metal parapet.

C. INTERIORS

Interior partition wall types typically include painted CMU, ceramic tile wainscot in the corridors, and drywall. Interior doors are generally solid wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, handrails, toilet partitions, shelving and lockers. Stair construction in the boiler room includes steel risers and treads. The interior wall finishes are typically painted CMU and drywall. Floor finishes in common areas are typically vinyl asbestos tiles and carpet. Floor finishes in assignable spaces are typically vinyl composition tiles and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 24,400 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Fixtures are original. Sinks, faucets, urinals, toilets and other plumbing fixtures were not updated. Most of the water fountains are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided by two original Boilers. Cooling is supplied by air-cooled chiller. The chiller was installed in 2007. The heating/cooling distribution system is ductwork, 2-pipe, air handles, and unit ventilators. Fresh air is supplied by infiltration and air handlers. Some of the air handling piping is insulated by encapsulated asbestos material. Ceiling exhaust fans are in restrooms. Controls and instrumentation are digital for the newly renovated classrooms and the remaining is pneumatic controls and are not centrally controlled by an energy management system.

Fire Protection

The building does not have fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and heat sensors and is centrally monitored. The telephone and data systems are combined and included in dedicated closets or cabinets that are not adequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed theater and stage, detention, medical equipment, audio-visual equipment, library equipment, food service equipment and three kitchen grease traps. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings. At the time of the 2008 Assessment it was noted that the cabinets are damaged in classrooms and teachers lounge and, in some cases, faucet water leaks into the cabinets.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where one out of 60 is a handicap space. Drainage is generally adequate and is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a new 8,000 gallon fuel oil tank.

Current Repair Cost: \$6,568,901.30**Replacement Cost:** \$10,497,622.39**FCI:** 62.58%

Facility: \Elementary Schools\Skyline Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems													
D4010		Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$4,318,804 \$145,922	\$2,250,097 \$76,025	\$6,568,901 \$221,947	Necess ary- 2-5 Yrs	Building Integrity	
D5010		Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$64,399	\$33,552	\$97,951	Necess ary- 2-5 Yrs	Capital Renewal	The main power switchgear and most of the electrical panels in hallways and classrooms are original and need update. Some panels have no capacity to expand at the time of need.
D5020		Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$508,866	\$265,119	\$773,985	Necess ary- 2-5 Yrs	Capital Renewal	The lighting system is partially updated, but most classrooms, offices, and library are in need of update. Many of the light covers are stained and broken. Some classrooms need ballasts and wiring.
D5030		Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$101,252	\$52,752	\$154,004	Necess ary- 2-5 Yrs	Compliance	Most of the security and communication system is original and needs update.
D5090		Other Electrical Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$3,350	\$1,745	\$5,096	Critical / Immediate Need	Compliance	Other electrical systems are not included in dedicated space and jammed with other materials in small storage room and next to water. The system shown in the photo needs adequate cooling and ventilation. The lack of both adequate cooling and ventilation might cause a fire hazard.
G3060110		Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$2,606	\$1,358	\$3,963	Necess ary- 2-5 Yrs	Environmental	The computer room and many of classrooms and offices have a lot of power strips scattered on the floor and other areas. This is both a tripping hazard and code violation.
G3090		Propane	System	Beyond Useful Life	Renew System	1	Ea.	\$4,544	\$2,367	\$6,911	Necess ary- 2-5 Yrs	Environmental	The tank is original and beyond useful life.
B2020		Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$129,543	\$67,492	\$197,035	Necess ary- 2-5 Yrs	Building Integrity	
B2030		Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$71,844	\$37,431	\$109,275	Necess ary- 2-5 Yrs	Building Integrity	
C1020		Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$73,333	\$38,207	\$111,540	Necess ary- 2-5 Yrs	Capital Renewal

C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$14,652	\$7,634	\$22,285	Necess ary- 2-5 Yrs	Capital Renewal	
C3020410	VAT	System	Beyond Useful Life	Renew System	1	Ea.	\$578,174	\$301,229	\$879,403	Necess ary- 2-5 Yrs	Environm ental	
D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$297,428	\$154,960	\$452,388	Necess ary- 2-5 Yrs	Capital Renewal	Sinks, faucets, and other plumbing fixtures were not updated, but some urinals and toilets were. Most of the water fountains are original and some are out of order. Some sinks are chipped, some faucets have poor pressure and do not operate adequately, and some flush valves are slow.
D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$21,218	\$11,055	\$32,273	Necess ary- 2-5 Yrs	Environm ental	
D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$23,080	\$12,024	\$35,104	Necess ary- 2-5 Yrs	Building Integrity	
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$32,386	\$16,873	\$49,259	Necess ary- 2-5 Yrs	Environm ental	
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$961,522	\$500,953	\$1,462,475	Necess ary- 2-5 Yrs	Capital Renewal	Most of the terminal units are original and show signs of damage. Some of the terminal units were replaced in approximately 10% of the school classrooms. The school is in need of complete terminal units update. The school engineer stated the units control system is not operating at times and, if operating, the temperature is not adequate.
D3020	Heat Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$210,321	\$109,577	\$319,899	Necess ary- 2-5 Yrs	Capital Renewal	The heat generation system is original and is beyond useful life. The boiler is in very poor condition. The school engineer indicated that these boilers are in constant break and repair.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$389,746	\$203,058	\$592,803	Necess ary- 2-5 Yrs	Capital Renewal	The distribution system pipes, pumps, ductwork, vents and units are mostly outdated and beyond useful life. Circulation pumps are leaking, pipe insulation is peeling, and pipes are leaking. There are a lot of leaks and stains throughout the school.

eCOMET Facility Report

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Springhill Lake Elementary

Address: 6060 Springhill Drive, Greenbelt, MD 20770

Attributes:

School Area	2
Congressional	5
County Council	4
Historical Building	No
Legislative	22
Original Building	Built in 1966, 33,264 S.F.
School Addition 1	Built in 1969, 14,956 S.F.
School Addition 2	Built in 1978, 15,530 S.F.
School Addition 3	Built in 1998, 7,243 S.F.
School Board District	2
School Grade	K-5th

General Information:

Function:	Elementary School
Gross Area:	70,993 S.F.

Year Built:

Last Renovation:

Facility Description:

Springhill Lake Elementary School is located on a 10-acre site inside I-495 (Capital Beltway) in Greenbelt, MD. The one-story, 70,993 square foot facility was originally constructed in 1966, with additions constructed in 1969, 1978, and 1998 (Special Education, Six Room Diag. Wing), and no major renovations. In 2010 the roof was replaced, and some minor HVAC projects were completed.

ACCESSIBILITY ISSUES

The main entrance to the facility has curb cuts and wide enough doors for wheel chair access, but lack push button wall switches and automatic door openers. Handicap toilet stalls are available in three gang restrooms. Toilet configurations and accessories are adequate. Interior graphics and/or signage for ADA compliance are inadequate or missing in the building. All the programs in this one-story facility are handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The building does not have a basement, but does have a crawl space.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, metal windows with operable frames and hollow metal steel doors. Most of the classrooms either have a fire window exit or an exterior door. The facility has low-slope built up roof with gravel ballast. The built-up roof was replaced in 2010.

C. INTERIORS

The interior partition walls typically include painted CMU with ceramic tiles in the corridors and folding metal partition walls in a few classrooms of the 1978 addition. Interior doors, including fire doors, are generally solid core wood doors with hollow metal frames. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have new electronic boards. Metal toilet partitions are original. The facility is single story and has no elevators or stairs. There is a metal ladder to the access the roof hatch.

Interior wall finishes are typically painted CMU walls and folding metal partitions. The floor finishes throughout the building are typically vinyl asbestos tiles (VAT), vinyl composition tiles (VCT), carpet, and ceramic tiles. The overall ceiling finishes are typically suspended acoustical tiles.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Fixtures are original. Sinks, faucets, and other plumbing fixtures were not updated. Most of the water fountains are original. Domestic water distribution is primarily copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided by two oil/gas-fired boilers. Cooling is supplied by temporary window units and rooftop package units over the new wing. The heating/cooling distribution system is ductwork in the gym and new wing and 2-pipe for heating system in majority of the building using air handlers, unit ventilators, and fin-tube radiators. Fresh air is supplied by infiltration. Ceiling-mounted exhaust fans are installed in restrooms and kitchen. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

Facility Executive Summary

The building has no fire sprinkler system except for the 1998 addition. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from pad-mounted and pole-mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Several switch gears are original. Lighting and branch wiring is serving recessed and surface mounted fluorescent fixtures. Exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of a main panel in the boiler room and audible and strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and bell/horn alert, detection devices throughout, and smoke detectors in the new wing. Telephone and data systems are separate and are not included in dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact devices, with no surveillance system and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap. The library has shelves and furniture. The nurse's room has three beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site and where there are four reserved handicap spaces out of 75 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Facility Executive Summary

Report Date: 08 Sep 2012

Facility: \Elementary Schools\Springhill Lake Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$7,533,643 \$170,850	\$3,925,028 \$89,013	\$11,458,672 \$259,863	Necess ary- 2-5 Yrs	Deferred Maintena nce	The single pane metal windows in the 1966, 1969, and 1978 additions are original, beyond useful life, and in fair to poor condition (difficult to operate). No major water leaks were reported through windows throughout the building.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$144,075	\$75,063	\$219,138	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior doors and hardware in the 1966, 1969, and 1978 additions are original, beyond useful life, and in poor condition (difficult to operate).
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$191,888	\$99,973	\$291,861	Necess ary- 2-5 Yrs	Deferred Maintena nce	Interior fittings in the building include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have new electronic boards which are in good condition. The toilet partitions are original, rusted/stained, and in poor condition. All the old toilet accessories are beyond useful life and need to be replaced. The mirrors in the restrooms are in fair condition and need an upgrade.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$236,312	\$123,119	\$359,431	Necess ary- 2-5 Yrs	Deferred Maintena nce	A portion of the facility has not been painted for more than five years and the paint is in poor condition (stained).
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$60,784	\$31,668	\$92,452	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet in the main office and classrooms is beyond useful life and in poor condition (worn and stained).
	C3030	Ceiling Finishes	System	Beyond Useful Life	Renew System	1	Ea.	\$405,450	\$211,239	\$616,689	Necess ary- 2-5 Yrs	Deferred Maintena nce	The acoustical ceiling tiles in the 1966, 1969, and 1978 additions are beyond useful life and in poor condition (stained and warped due to roof leaks, especially in the special education wing and gymnasium).
	C3020410	VAT (Resilient Flooring)	System	Beyond Useful Life	Renew System	1	Ea.	\$906,609	\$472,343	\$1,378,952	Necess ary- 2-5 Yrs	Deferred Maintena nce	The VAT floor finish in the corridors and classrooms of 1966, 1969, and 1978 additions, including gymnasium, is beyond useful life, and in fair to poor condition (worn and cracks on surface).

Prince George County Public Schools

13300 Old Marlboro Pike
Upper Marlboro, MD 20772

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$131,325	\$68,420	\$199,745	Necess ary- 2-5 Yrs	Deferred Maintena nce	The interior doors (including fire doors) are generally solid core wood doors with hollow metal frames. The interior doors in the original 1966 and 1969 additions are beyond useful life and in fair to poor condition (chipped corners, worn surface finishes, and possibly contain asbestos).
G2020	Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$123,004	\$64,085	\$187,089	Necess ary- 2-5 Yrs	Deferred Maintena nce	Asphalt surface parking is available on-site and is in poor condition, with cracks and uneven surfaces. The parking lot was patched several times in the past.
G2030	Pedestrian Paving	System	Beyond Useful Life	Renew System	1	Ea.	\$37,650	\$19,616	\$57,266	Necess ary- 2-5 Yrs	Deferred Maintena nce	Concrete sidewalks immediately adjacent to the facility are beyond useful life and in fair condition, with cracks and damaged edges.
D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$534,863	\$278,663	\$813,526	Necess ary- 2-5 Yrs	Deferred Maintena nce	Fixtures are mostly in poor condition due to aging. Sinks, faucets and other plumbing fixtures were not updated from its original state and in poor condition due to aging. Most of the water fountains are original and in poor condition.
D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$38,250	\$19,928	\$58,178	Necess ary- 2-5 Yrs	Deferred Maintena nce	Domestic water distribution is primarily copper and is in fair to poor condition due to aging.
D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$40,800	\$21,257	\$62,057	Necess ary- 2-5 Yrs	Deferred Maintena nce	Rain water system is internal with roof drains in fair to poor condition.
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$58,650	\$30,557	\$89,207	Necess ary- 2-5 Yrs	Deferred Maintena nce	Sanitary waste system is cast iron that is in fair to poor condition due to aging.
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$1,728,263	\$900,425	\$2,628,687	Necess ary- 2-5 Yrs	Deferred Maintena nce	Heating is provided by two oil/gas-fired boilers that are in fair to poor condition. Cooling is supplied by rooftop package units.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$700,613	\$365,019	\$1,065,632	Necess ary- 2-5 Yrs	Deferred Maintena nce	Cooling is supplied by rooftop package units. The heating/cooling distribution system is typically 2-pipe for heating system using unit ventilators said to be in poor condition and fin-tube radiators which are in poor condition. Fresh air is supplied by infiltration and air handlers which are beyond useful life.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$64,388	\$33,546	\$97,933	Necess ary- 2-5 Yrs	Deferred Maintena nce	Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$51,000	\$26,571	\$77,571	Necess ary- 2-5 Yrs	Deferred Maintena nce	The control system (balancing) is in poor condition due to aging, causing some areas to be cool while hot or warm in others.
D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$262,650	\$136,841	\$399,491	Necess ary- 2-5 Yrs	Deferred Maintena nce	The building has no fire sprinkler system except for the 1998 addition.

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$116,025	\$60,449	\$176,474	Necessary- 2-5 Yrs	Deferred Maintenance	The electrical service is fed from pad-mounted and pole-mounted transformer that delivers 1000amps, 120-208v 3-phase, and 4-wire power to a main panel. Power distribution wiring is typically copper 3-wire grounded and is adequate.
D5020	Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$914,813	\$476,617	\$1,391,430	Necessary- 2-5 Yrs	Deferred Maintenance	Lighting and branch wiring is 3-wires grounded serving recessed and surface mounted fluorescent.
D5030	Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$181,688	\$94,659	\$276,347	Necessary- 2-5 Yrs	Deferred Maintenance	The fire alarm system consists of a main panel in the boiler room, audible and strobe annunciators in common spaces and interior corridors, which are in compliance with ADA requirements. The building includes an internal security system that is actuated by contact devices, motion detection devices and is centrally monitored.
G3060110	Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$4,463	\$2,325	\$6,787	Necessary- 2-5 Yrs	Deferred Maintenance	
E1020	Institutional Equipment	System	Beyond Useful Life	Renew System	1	Ea.	\$126,863	\$66,095	\$192,958	Necessary- 2-5 Yrs	Deferred Maintenance	
E1090350	Food Service Equipment, EACH	System	Beyond Useful Life	Renew System	1	Ea.	\$158,131	\$82,386	\$240,518	Necessary- 2-5 Yrs	Deferred Maintenance	
F1040	ADA Compliance	ADA Compliance	Inadequate	ADA Compliance	63,750	S.F.	\$97,703	\$50,903	\$148,607	Does Not Meet Current Code/Standards	ADA / Accessibility

Facility: \Elementary Schools\Tayac Elementary

Address: 8600 Allentown Road, Fort Washington, MD 20744

Attributes:

School Area	2
Congressional	4
County Council	8
Historical Building	No
Legislative	26
Original Building	Built in 1955, 15,649 S.F.
School Addition 1	Built in 1956, 8,759 S.F.
School Addition 2	Built in 1962, 5,551 S.F.
School Addition 3	Built in 1972, 10,347 S.F.
School Addition 4	Built in 2000, 7,552 S.F.
School Board District	8
School Grade	PreK-5th

General Information:

Function:	Elementary School
Gross Area:	47,858 S.F.

Year Built:

Last Renovation:

Facility Description:

Tayac Elementary School is a one-story, 47,858 square foot facility located on a 10-acre site close to MD Route 210 (Indian Head Highway) in Fort Washington, MD. The original building was constructed in 1955 and additions were constructed in 1956, 1962, 1972, and 2000, with no major renovations. The latest addition in 2000 includes six classrooms and a connecting wing. In 2012 the roof covering was replaced.

ACCESSIBILITY ISSUES

All the programs in the building are handicap accessible via concrete ramps. The main entrance has a ramp and wide enough doors for wheel chair access, but lacks push button wall switches and automatic door openers. Toilet configurations and accessories are inadequate and do not comply with all ADA accessibility guidelines. Interior graphics and/or signage for ADA compliance are inadequate or missing in building. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The facility does not have a basement, cellar, or a crawl space.

B. SHELL

The superstructure of the building is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The brick veneer in the original building and all additions prior to 2000. The six classrooms added in 2000 have brick veneer on the exterior enclosure. The metal windows are original. Flashing and caulking around the windows. Exterior metal doors are original. Roof construction is low-slope, built-up roof replaced in 2012.

C. INTERIORS

Interior partition walls typically include painted concrete masonry unit (CMU) with glazed block wainscot in the corridors and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalk boards. The facility has a small concrete staircase in the boiler room with concrete treads and risers and steel frame that is original.

Interior wall finishes are typically painted CMU walls and painted drywall. Floor finishes are typically terrazzo, carpet, vinyl composition tiles (VCT), and ceramic tiles. There is terrazzo floor finish in the hallways of the original building. Ceiling finishes are typically suspended acoustical tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 13,500 square feet of asbestos containing fissured ceiling tile and 1,730 square feet of asbestos containing 2x4 masonry ceiling tile.

D. SERVICES

Conveying

The building does not include an elevator.

Plumbing

Fixtures are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains.

HVAC

Facility Executive Summary

Heating is provided by a 1986 gas-fired boiler with a 1999 burner. Cooling is supplied by temporary window units and rooftop package units. The kitchen and cafeteria are cooled by two original condensing units that supply the air handling units. The heating/cooling distribution system uses original fan coil units. The 2000 addition has seven gas-fired rooftop units that provide both heating and cooling. Fresh air is supplied by air handling units in special education and cafeteria. Ceiling/wall mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. An additional service was installed for the 2000 addition. Power distribution from branch panels wiring is typically copper. Lighting and branch wiring is typically serving surface-mounted fluorescents. Lighting was updated in 2004. Emergency power and lighting are present, but inoperable as of the 2008 Assessment. Exit signs are present at exit doors and near stairways and are illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in the original building and older additions, and audible and strobe annunciators in the 2000 addition in interior corridors. The system is activated by pull stations and smoke detectors and is centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library (media center), theater and stage (multi-purpose room), medical equipment, food service equipment and a kitchen grease trap. The library has shelving. The nurse's station has sinks, shelving, and cabinets. The building also includes fixed casework/cabinetry in the classrooms and multiple seating furnishings (folding chairs and tables) in the cafeteria.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on site where there is one handicap space out of total 52 parking spaces. Drainage is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Current Repair Cost: \$7,124,216.80**Replacement Cost:** \$13,340,224.16**FCI:** 53.40%

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems B2030	Exterior Doors	System		Beyond Useful Life	Renew System	1	Ea.	\$4,580,383 \$76,178	\$2,386,380 \$39,689	\$6,966,763 \$115,867	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior metal doors are original, beyond useful life, and in fair to poor condition. The main entrance door does not close properly and some fire exit doors in the classrooms do not open. Overall, the exterior doors are not easy to operate and some do not seal tightly. The door hardware is in fair condition.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$132,607	\$69,088	\$201,695	Necess ary- 2-5 Yrs	Deferred Maintena nce	Interior fittings in the building include chalk/tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalk boards, which are in fair condition. Toilet accessories such as metal toilet partitions are old, beyond useful life, and in poor condition. The mirrors in the restrooms also need an upgrade. The building is not painted in last several years and partition walls need to be repainted.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$183,486	\$95,596	\$279,082	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3010230	Tile	System	Beyond Useful Life	Renew System	1	Ea.	\$22,660	\$11,806	\$34,466	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$45,520	\$23,716	\$69,236	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet in some classrooms and library is beyond its useful life, worn, stained, and in poor condition.
	C3020410	Concrete	System	Beyond Useful Life	Renew System	1	Ea.	\$9,560	\$4,981	\$14,541	Necess ary- 2-5 Yrs	Deferred Maintena nce	The concrete finish is in fair condition with peeling paint observed at several places.
	C3020410	Ceramic Tile	System	Beyond Useful Life	Renew System	1	Ea.	\$58,200	\$30,322	\$88,522	Necess ary- 2-5 Yrs	Deferred Maintena nce	The ceramic tiles in the restrooms are original, stained, beyond useful life, and in fair to poor condition.
	C3020410	VAT (Resilient Flooring)	System	Beyond Useful Life	Renew System	1	Ea.	\$51,210	\$26,680	\$77,890	Necess ary- 2-5 Yrs	Deferred Maintena nce	The kitchen and some restrooms have 9x9 vinyl asbestos tiles, which are in poor condition.
	C3030210	Acoustical Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$282,948	\$147,416	\$430,364	Necess ary- 2-5 Yrs	Deferred Maintena nce	Acoustical ceilings are in fair to poor condition with stains due to pipe condensation and roof leakages in the past.
	G2020	Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$78,899	\$41,106	\$120,005	Necess ary- 2-5 Yrs	Deferred Maintena nce	Asphalt surface parking is in fair condition with potholes and cracks. The parking surface has been patched several times in the past. The road surface is in fair condition with some damage.

Facility Description:

Templeton Elementary School is a two-story, 63,432 square foot facility located on a 10-acre site close to MD Route 295 (Baltimore-Washington Parkway) in Riverdale, MD. The original building was constructed in 1968 and an addition was constructed in 1998, with no major renovations. In 2009 an underground fuel tank was replaced. In 2012 some minor updates to the piping insulation were performed.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include interior ramp access, signage, restrooms, drinking fountains, fire alarm, and door hardware.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade with concrete footings and foundation walls. The building has a crawl space of CMU construction.

B. SHELL

The superstructure is concrete reinforced masonry with face brick, load bearing CMU walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill on built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel with hollow metal frames. Interior doors are solid core wood with hollow metal frames. The ground level doors have fire labels. Roofing is typically low-slope with built-up roof replaced in 1993 with partial upgrades in 1997.

C. INTERIORS

Interior partition wall types typically include painted CMU with tile over the CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes concrete risers and treads with tile finishes. The interior wall finishes are typically painted CMU with tiles. Floor finishes in common areas are typically vinyl asbestos tile, VCT, ceramic tile, and wood flooring in the gym. Floor finishes in assignable spaces are typically vinyl asbestos tile, VCT, carpet, and quarry tile in the kitchen. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 52,024 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical tile and suspended Tectum panels on ground level that. Ceiling finishes in assignable areas are typically suspended acoustical tile and suspended Tectum panels.

D. SERVICES

Conveying

Conveying equipment includes one hydraulic elevator, three stops.

Plumbing

Fixtures are original. The urinals have been renewed. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas fired hot water generator and storage tank.

HVAC

Heating is provided by two oil-fired hot water boilers replaced in 2007. Cooling is supplied by one water cooled chiller and corresponding ground mounted cooling tower. The heating/cooling distribution system is a 2-pipe system to unit ventilators, original to the building. Ceiling-mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are pneumatic.

Fire Protection

The building has a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from an underground vaulted utility transformer that delivers power to a renewed main switchboard. Power distribution wiring is typically copper. Lighting is typically fluorescent lay-in troffers in the corridors and surface wrap-around units in the classrooms. The exterior parking and roadway lighting consists of tri-head bracket mounted HID luminaries on steel poles and round concrete base. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible signal devices in common spaces, interior corridors, etc. The fire alarm control panel (FACP) is a non-addressable system with an upgrade to a system, 13 zones including flow and tamper. The system is activated by pull stations and smoke detectors. The telephone and data systems are separate and include dedicated closets or cabinets. The building includes an internal security system that is actuated by contact, optical or combination devices, and is centrally monitored.

Other Electrical Systems:

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment and food service equipment. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking spaces available on-site where two out of 54 are handicap spaces and paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 6,000 gallon underground fuel oil tank replaced in 2009.

Current Repair Cost: \$7,657,470.36**Replacement Cost:** \$17,137,342.68**FCI:** 44.68%

School Board District	6
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	61,175 S.F.

Year Built:**Last Renovation:****Facility Description:**

Thomas Claggett Elementary School is a two-story, 61,175 square foot facility located on a 10-acre site inside I-495 (Capital Beltway) in the District Heights Region of MD. The original building was constructed in 1971 with four modular classrooms added in 1991. In 2012 the kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The main entrances have ramps and are wide enough for wheel chair access but lack push button wall switches and automatic door openers. Handicap toilet stalls are present in the gang restrooms on the first floor. Toilet configurations and accessories are adequate. Interior graphics and/or signage for ADA compliance are inadequate and missing in the building. The facility does not have an elevator, but has concrete stairs and a chair-lift to access the second floor. There is a ramp to the 1991-addition that provides handicap access from the exterior. Since there are no ramps or elevators within the building, handicapped students and staff have to exit the building and re-enter through other doors (on the other side of the building) in order to access the two levels within the building. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The building does not have a basement, cellar, or sub-floor. The building has crawl space.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over CMU, single pane metal windows with operable frames, and hollow metal steel doors. The metal windows throughout the building are original. Most of the classrooms do not have any exterior door openings, with an exception of classroom 1 and 2. The exterior doors throughout the building are original. The original building has low-slope built up roof with gravel ballast and the 1991 addition has a single-ply rubber membrane roof. The built-up roof was replaced in 1993.

C. INTERIORS

Interior partition walls typically include painted CMU with ceramic tiles in the corridors, gypsum drywalls, and folding metal partitions (in four classrooms). Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include old/original chalk/tack boards, toilet accessories, handrails, and toilet partitions. Most of the classrooms have original chalkboards. The facility has concrete stairs with steel frames. There is a metal ladder to access the roof hatch.

The interior wall finishes are typically painted CMU and painted gypsum drywalls. Floor finishes throughout the building are typically vinyl composition tiles (VCT), carpet, and ceramic tiles. There are VCT floor finishes in corridors and classrooms throughout the building. The overall ceiling finishes are typically acoustical suspended perforated acoustical tiles. The pipe insulation and wall finishes in the boiler room may contain asbestos fibers.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are mostly original. Sinks, faucets, and other plumbing fixtures were not updated while some urinals and toilets were. Most of the water fountains are original. Domestic water distribution is mostly copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater.

HVAC

Heating is provided by two original oil/gas fired Boilers. Cooling is supplied by a chiller and cooling tower. The heating/cooling distribution system is ductwork, 2-pipe, unit ventilators, and air handlers and fin-tube radiators in hallways. Fresh air is supplied by infiltration and air handlers. Ceiling exhaust fans are in restrooms. Controls and instrumentation is minimal. Controls system is pneumatic and is not centrally controlled by an energy management system.

Fire Protection

Facility Executive Summary

The building does not have fire sprinkler system except for the custodian closets. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad-mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Most of the switch gear is still original. Lighting and branch wiring is serving recessed, surface-mounted, and pendant-mounted fluorescent and incandescent. Emergency power and lighting is present but the generator is original. Emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors, updated in 2003. The system is activated by pull stations and heat sensors and is not centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets that are not adequately secured and cooled. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems:

The building has an original emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The library has shelves and tables/chairs. The nurse's room has two beds. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in the classrooms, window treatment and multiple seating furnishings (folding chairs and tables) in the multi-purpose room.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where there are two reserved handicap spaces out of 63 parking spaces. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic.

Current Repair Cost: \$9,955,261.01**Replacement Cost:** \$16,383,090.31**FCI:** 60.77%

Facility: \Elementary Schools\Thomas Claggett Elementary_Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$6,368,202 \$178,782	\$3,317,833 \$93,146	\$9,686,035 \$271,928	Necess ary- 2-5 Yrs	Deferred Maintena nce	The metal windows throughout the building are original, beyond useful life, and in poor condition. Water leaks were reported through windows throughout the building. The flashing and caulking around the windows are in poor condition and are beyond useful life.
	B2030	Exterior Doors (Original Bldg)	System	Beyond Useful Life	Renew System	1	Ea.	\$114,031	\$59,410	\$173,441	Necess ary- 2-5 Yrs	Deferred Maintena nce	The exterior doors throughout the original building are old, beyond useful life, and in fair condition. Some metal exterior doors do not close properly, especially the exterior doors in classrooms 1 and 2. The door hardware is beyond useful life and in fair condition.
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$245,826	\$128,075	\$373,901	Necess ary- 2-5 Yrs	Deferred Maintena nce	The interior walls needs to be repainted. The school has not been painted for last fifteen years and the paint is peeling off the walls.
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$117,948	\$61,451	\$179,398	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet in some classrooms and offices throughout the building is old, beyond useful life, and in poor condition (stained and worn-out).
	C3030	Ceiling Finishes	System	Beyond Useful Life	Renew System	1	Ea.	\$373,609	\$194,650	\$568,259	Necess ary- 2-5 Yrs	Deferred Maintena nce	The acoustical ceiling tiles throughout the building are old, beyond useful life, warped, and in poor condition.
	G2020	Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$101,832	\$53,054	\$154,886	Necess ary- 2-5 Yrs	Deferred Maintena nce	Asphalt surface parking is available on-site and is in fair condition with cracks and pot holes. The road surface is in fair condition with some damage.
	G2030	Pedestrian Paving	System	Beyond Useful Life	Renew System	1	Ea.	\$26,840	\$13,984	\$40,824	Necess ary- 2-5 Yrs	Deferred Maintena nce	Concrete sidewalks immediately adjacent to the facility are old, beyond useful life, and in fair condition (with cracks).
	A1010	Standard Foundations	Wall Foundations	Failing	Professional Services- Inpect foundation Walls	1	Each	\$10,171	\$5,299	\$15,471	Potentia lly Critical- 12 months	Building Integrity	Professional services to investigate foundation wall and/or moisture barrier failure. Structural cracks were also observed on the building walls (for example, in the boiler room and stairwell) that indicate possible settlement or damage to the slab-on-grade.

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

C1030	Fittings (Original Bldg)	System	Beyond Useful Life	Renew System	1 Ea.	\$170,187	\$88,667	\$258,854	Necess ary- 2-5 Yrs	Deferred Maintena nce	The interior fittings include old chalk/tack boards, toilet accessories, handrails, and toilet partitions. Most of the classrooms have original chalkboards which are beyond useful life and in fair condition. Metal toilet partitions are original, rusted/stained, and in poor condition. All old toilet accessories are beyond useful life and need to be replaced. The mirrors in the restrooms are in fair condition and needs an upgrade.
D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1 Ea.	\$473,888	\$246,895	\$720,783	Necess ary- 2-5 Yrs	Deferred Maintena nce	Plumbing fixtures are mostly original and need update. Some toilets and urinals were updated while most sinks, faucets, drinking fountains and other plumbing fixtures were not updated. Some were covered with plastic bags to prevent students from using them. Some sinks are chipped, cracked, and have rust. Some faucets are slow and broken.
D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1 Ea.	\$33,808	\$17,614	\$51,422	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1 Ea.	\$36,673	\$19,107	\$55,780	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1 Ea.	\$51,572	\$26,869	\$78,441	Necess ary- 2-5 Yrs	Deferred Maintena nce	The sanitary piping is beyond useful life and outdated and in some areas are clogged and others leaking.
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1 Ea.	\$1,531,682	\$798,007	\$2,329,689	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most of the terminal units are original and show signs of damage. The school is in need of complete terminal units update.
D3020	Heat Generating Systems	System	Beyond Useful Life	Renew System	1 Ea.	\$334,644	\$174,349	\$508,993	Necess ary- 2-5 Yrs	Deferred Maintena nce	The heat generation system is original and is beyond useful life. The boilers are in poor condition.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1 Ea.	\$620,581	\$323,323	\$943,903	Necess ary- 2-5 Yrs	Deferred Maintena nce	The distribution system pipes, pumps, ductwork, vents and units are mostly outdated and beyond useful life. Circulation pumps are leaking, pipe insulation is peeling, and pipes are leaking. There are some of leaks and stains throughout the school.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1 Ea.	\$56,729	\$29,556	\$86,285	Necess ary- 2-5 Yrs	Deferred Maintena nce	The control system is limited and original and in need of update.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1 Ea.	\$45,269	\$23,585	\$68,854	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D4010	Sprinklers	System	Beyond Useful Life	Renew System	1 Ea.	\$232,646	\$121,209	\$353,855	Necess ary- 2-5 Yrs	Deferred Maintena nce

Facility Executive Summary

D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$102,571	\$53,439	\$156,010	Necessary- 2-5 Yrs	Deferred Maintenance	The main power switchgear and most of the electrical panels in hallways and classrooms are original and need update. Some panels have no capacity to expand at the time of need. The lighting system is partially updated but most classrooms and offices are in need of update. Many of the light covers are stained and broken. Some rooms need ballasts and wiring. The emergency generator, electrical panels, transformers and other related electrical equipment are mostly original. Although this equipment may function properly most of the time, they are beyond useful life and ready for update.

School Addition 2	Built in 1956, 4,340 S.F.
School Addition 3	Built in 1974, 22,210 S.F.
School Addition 4	Built in 1989, 4,084 S.F.
School Board District	3
School Grade	PreK-6th

General Information:

Function:	Elementary School
Gross Area:	64,324 S.F.

Year Built:

Last Renovation:

Facility Description:

Thomas Stone Elementary School is a two-story, 64,324 square foot facility located on a 6-acre site close to Eastern Avenue NE in Mt Rainier, MD. The original building was constructed in 1950 and additions were constructed in 1952, 1956, 1974, and 1989 (Four Modulares), with no major renovation performed. Parking improvements are currently being programmed for a 2013 construction completion.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. However, further study by an ADA Specialist is required to insure compliance with Federal and State requirements. The main entrance is not at grade elevation and the secondary entrances are not designed with the handicapped in mind. Interior ADA systems are almost nonexistent. There is no complaint signage, door hardware, restrooms, or drinking fountains in place.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and concrete footings that are not showing signs of settlement or damage. The building does not have a basement, cellar, or sub-floor. There are no indications of water infiltration.

B. SHELL

The superstructure is mixture of steel frame and load bearing masonry walls. Floor construction is slab on grade and metal pan with lightweight fill. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer. Exterior windows are aluminum sash with fixed and operable single-pane glazing. Exterior doors are a mixture of hollow metal steel, solid core wood, and aluminum applications. Roofing is typically flat or low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU, drywall, and pre-fabricated wall sections. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, handrails and toilet partitions in fair condition. Stair construction includes concrete and metal risers and treads with terrazzo and tile finishes. The interior wall finishes are typically painted CMU or drywall. Floor finishes in common areas are typically terrazzo, ceramic tile, vinyl composition tile, and carpet. Floor finishes in assignable spaces are typically vinyl tile. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report, the school contains 36,850 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. BUILDING SERVICES

Conveying Systems

The building does not have an elevator.

Mechanical/Plumbing

The school has three Hurst steam boilers, which were installed in 2004. Each of the boilers uses natural gas as primary fuel and oil as an alternate fuel source. The system is a 2-pipe distribution system with individual controls in each classroom. Heating is provided by the hot water through unit ventilators. Air conditioning is provided in the original building and additions 1 and 2 by an air cooled chiller, which was mounted on the roof in 2004. Addition 3 has package rooftop units, which were installed in 1997. Addition 4 has thru-wall package units with electric heat, which were installed in 1989. Exhaust/ventilation is by rooftop exhaust fans.

Fire Sprinkler System

The building does not have a fire sprinkler system.

Electrical

Facility Executive Summary

The incoming electrical service is supplied by a utility owned pad mount transformer serving the MDP, located in the original building, is a board, which was installed in 1974. The later date additions are fed from the MDP. There is an emergency generator, oil fired. Lighting is primarily fluorescent in all areas. The fixtures have been modified under a system-wide upgrade to T8 lamps and electronic ballasts in 2007.

Fire Protection/Life Safety Systems

The main fire alarm system is a Simplex, non-addressable, which was installed in 1974. There are audible signal devices in the corridors, but no strobes. There is a centrally monitored security system, intercom, and phone/data system.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap.. The building also includes fixed casework, window treatment, floor grilles and mats, multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where it is schedule for improvements to include a total of 124 parking spaces with paths to the building entrance. Additional parking is provided in the gravel lot that is next to the general parking. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,000 gallon underground fuel oil tank which was installed in 2006.

School Board District	5
School Grade	PreK-5th

General Information:

Function:	Elementary School
Gross Area:	42,275 S.F.

Year Built:
Last Renovation:

Facility Description:

Tulip Grove Elementary School is a one-story, 42,275 square foot facility located on a 10.3-acre site close to MD Route 197 and MD Route 564 in Bowie, MD. The original building was constructed in 1964 and one addition was constructed in 1971 with no major renovations. In 2008 an underground fuel tank was replaced.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. The ramp to the main entrance needs improvement, the main entrance doors lack hardware to facilitate handicap accessibility, only two toilet stalls appear somewhat in compliance with ADA requirements, and interior door hardware needs improvement. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade. Roof construction is Tectum board material with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing, which was replaced in 1993, is typically low-slope with built-up roof.

C. INTERIORS

Interior partition wall types typically include painted CMU and glazed blocks. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving, handrails and toilet partitions. Interior wall finishes are typically tile and glazed blocks. Floor finishes in common areas is typically ceramic tile, vinyl composition tile, carpet, and vinyl asbestos tiles. Floor finishes in assignable spaces is typically vinyl tile, carpet and vinyl asbestos tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report the school contains 39,194 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels, installed in 2006. Ceiling finishes in assignable areas are typically plaster and suspended acoustical panels. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report the school contains 34,000 square feet of asbestos containing needlepoint ceiling tiles and 2,550 square feet of asbestos containing fissured ceiling tiles.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Fixtures are original. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system except in janitors closets.

HVAC

Heating is provided by two steam dual fired boilers that supply fan coil units, fin tube radiators and terminal units throughout the building. Distribution is a 2-pipe system to fan coil units and fin tube radiators. Cooling is provided by a DX split system to the office area and by individual window units in classrooms. Fresh air is supplied mostly by infiltration.. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides 120/208 volt service to a 1200 amp main disconnect. Minor upgrades were done for the installation of the window units but most of the distribution system is original and is inadequate. Lighting has not been upgraded but light levels are generally adequate. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Facility Executive Summary

Communication and Security

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage (MPR), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, and floor grilles and mats furnishings and window.

F. SPECIAL CONSTRUCTION

There are no special construction features in the building.

G. SITE

Asphalt surface parking is available on-site where two out of 54 are handicap spaces with paths to the building entrances. Drainage is generally handled by surface drainage. The site includes concrete sidewalks, site lighting and utility lines including water, sewer, electrical and an 8,000 Gal. underground fuel tank installed in 2008.

Facility Description:

University Park Elementary School is a one-story, 56,264 square foot facility located on a 5.1-acre site close to MD 295 (Baltimore-Washington Parkway) in Hyattsville, MD. The original building was constructed in 1978 and additions were constructed in 1989 (Four Modulares) and 2000. In 2008 an underground fuel tank was replaced. In 2012 there was a POD conversion of 21,889 S.F. into classrooms.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include access ramps, door hardware, interior signage, and fire alarms.

A. SUBSTRUCTURE

The building typically is a slab-on-grade with concrete footings and foundation walls. The building has a crawl space construction of cast in place concrete.

B. SHELL

The superstructure is concrete reinforce masonry with face brick, load bearing CMU and glaze block walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill on built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Windows are aluminum sash with operable single-pane glazing. With the POD conversion performed in 2012 most of the exterior windows were replaced. Exterior doors are hollow metal steel with hollow metal frames. Interior doors are solid core wood with hollow metal frames. The doors do not have fire labels. Roofing is typically low-slope with built-up roof replaced in 2002.

C. INTERIORS

Interior partition wall types typically include painted CMU and glazed block. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes concrete risers and treads with tile finishes. The interior wall finishes are typically painted CMU and glazed block and generally. Floor finishes in common areas is typically VCT, carpet, ceramic tile, and wood (on the stage) that have worn with time. Floor finishes in assignable spaces is typically VCT, quarry tile, and carpet. Ceiling finishes in common areas are typically Tectum and suspended acoustical tile. Ceiling finishes in assignable areas are typically suspended acoustical tile.

D. SERVICES**Conveying**

The building does not include conveying equipment. It is a one story building.

Plumbing

With the POD conversion performed in 2012 most of the plumbing fixtures were replaced. Domestic water distribution is copper. Sanitary waste system is primarily cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a fired hot water.

HVAC

Heating is provided by two gas and oil-fired boilers. Cooling to the original building is supplied by an exterior, ground mounted, air cooled chiller replaced in 2007. The heating distribution system in the original building is a 2-pipe system to above-ceiling fan coil units in the assigned spaces and unit ventilators in the corridors. Addition 1 has thru-wall/wall hung package heat pumps with electric heat, two per classroom, original to construction. Addition 2 has four package rooftop units with gas heat, original to construction. Ceiling-mounted exhaust grilles are installed in restrooms to roof mounted exhaust fans. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system. Some improvements were performed to the HVAC system in 2007.

Facility Executive Summary

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are, distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted utility transformer that delivers power to a main switchboard. Power distribution wiring is typically copper. Lighting is typically fluorescent lay-in troffers in the corridors and media center and surface tandem wrap-around units in the classrooms. The gym has suspended round HID's with wire guards. Emergency power and lighting are present and exit signs are present at exit doors and are typically illuminated.

Communications and Security

The fire alarm system consists of audible signal devices in common spaces, interior corridors, etc. The fire alarm control panel (FACP) is original, single-zone, non-addressable system. There was a later (2000) upgrade to an addressable system. The system is activated by pull stations and smoke detectors. The telephone and data systems are separate and include dedicated closets or cabinets. The building includes an internal security system that is actuated by contact, optical, or combination devices and is centrally monitored.

Other Electrical Systems:

The building has an indoor emergency generator; propane gas fired, with a corresponding automatic transfer switch.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, health room equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple-seating furnishings. With the POD conversion performed in 2012 most of the institutional equipment was replaced.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where two out of 14 are handicap spaces and path to building entrance. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 10,000 gallon underground fuel oil tank replaced in 2008.

Facility Executive Summary

Facility: \Elementary Schools\Waldon Woods Elementary

Address: 10301 Thrift Road, Clinton, MD 20735

Attributes:

School Area	2
Congressional	5
County Council	9
Historical Building	No
Legislative	27A
Original Building	Built in 1968, 39,812 S.F.
School Addition 1	Built in 1989, 3,964 S.F.
School Addition 2	Built in 2001, 13,053 S.F.
School Board District	9
School Grade	PreK-5th

General Information:

Function:	Elementary School	Year Built:
Gross Area:	56,829 S.F.	Last Renovation:

Facility Description:

Waldon Woods Elementary School is a one-story, 56,829 square foot facility located on a 10-acre site close to MD Route 5 (Branch Avenue) in Clinton, MD. The original building was constructed in 1968 and multiple additions were constructed in 1989 and 2001, with no major renovation. The original building contains a library, cafetorium/kitchen, administration area and other ancillary areas, and is surrounded by the 1989 addition of four classroom PODs, each containing four classrooms that are divided by folding metal partitions. The 2001 addition in the rear of the school contains primary school classrooms. In 2012 there was a POD conversion of 19,000 S.F. into classrooms.

ACCESSIBILITY ISSUES

Efforts were made to make this one-story facility handicap accessible. For example, handicap parking spaces were placed near the main entrance, curb cuts and ramps to the main entrance doors were installed, and handicap accessible restrooms were installed in the 2002 addition. However, the main entrance doors lack push button wall switches and automatic door openers, toilet configurations and accessories in the original building and 1989 addition are generally inadequate and do not comply with all the ADA accessibility guidelines. In addition, the stage in the cafetorium is not handicap accessible. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade foundation. The building does not have a basement, cellar, sub-floor, or crawl space, and there are no indications of water infiltration. Standing water does however remain around the foundation in the interior courtyards after hard rain.

B. SHELL

The superstructure is a combination of steel framing and masonry bearing walls. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Metal storefront windows near interior courtyards leak after hard rain. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up and single ply membrane roof with was replaced in 2000.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed block wainscot in the corridors, drywall, and folding metal partitions. Interior doors are generally hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, and handrails. Toilet partitions have been replaced throughout the facility in 2007 with the exception of two gang restrooms. There are no stairs in the building. The interior wall finishes are typically painted CMU and drywall and exposed brick. Floor finishes in common areas are typically vinyl asbestos tiles in the original building and vinyl composition tiles in the 1989 and 2001 additions. Floor surfaces are uneven in the main hallways of the original building. Floor finishes in assignable spaces are typically vinyl asbestos tiles and ceramic tiles in original building and vinyl tiles and carpet in the 1989 and 2001 additions. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report the school contains 32,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report there is 990 square feet of asbestos containing plaster ceilings in the kitchen area.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Facility Executive Summary

Fixtures are original. Sinks, faucets, and other plumbing fixtures were not updated, but some urinals and toilets were updated. Most of the water fountains are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is a mix between internal and external with roof drains. Domestic hot water is provided by gas hot water heater located in the boiler room.

HVAC

Heating is provided by two oil fired boilers replaced in 2007. Cooling is supplied by approximately 80% window units and 20% roof top units. The heating/cooling distribution system is a ductwork and 2-pipe system using unit ventilators and ceiling vents. Fresh air is supplied by infiltration. Ceiling mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pole mounted transformer that delivers power to a main panel. Power distribution from branch panel wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted, and pendent-mounted fluorescent, and incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The telephone and data systems are combined and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by optical devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatments, floor grilles and mats, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where five out of 65 are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has a 10,000 gallon fuel oil tank.

Current Repair Cost: \$7,592,437.18**Replacement Cost:** \$15,055,162.25**FCI:** 50.43%

B2030	Exterior Doors	System	Beyond Useful Life	Renew System		1	Ea.	\$96,745	\$50,404	\$147,149	Necess ary- 2-5 Yrs	Deferred Maintena nce	
C1030	Fittings	System	Beyond Useful Life	Renew System		1	Ea.	\$130,015	\$67,738	\$197,752	Necess ary- 2-5 Yrs	Deferred Maintena nce	
C3010230	Paint	System	Beyond Useful Life	Renew System		1	Ea.	\$140,521	\$73,211	\$213,732	Necess ary- 2-5 Yrs	Deferred Maintena nce	
C3020410	VCT	System	Beyond Useful Life	Renew System		1	Ea.	\$59,500	\$30,999	\$90,499	Necess ary- 2-5 Yrs	Deferred Maintena nce	
C3020410	Carpet	System	Beyond Useful Life	Renew System		1	Ea.	\$44,363	\$23,113	\$67,475	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System		1	Ea.	\$360,276	\$187,704	\$547,981	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most of the plumbing fixtures are original and are out of order. Sinks, faucets, toilets, urinals and other plumbing fixtures are in poor condition.
D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System		1	Ea.	\$25,828	\$13,456	\$39,284	Necess ary- 2-5 Yrs	Deferred Maintena nce	Piping for both the hot and cold water is mostly original. The distribution system was not updated and needs update. Some of the faucets had low pressure that could indicate line blockage.
D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System		1	Ea.	\$27,579	\$14,369	\$41,947	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System		1	Ea.	\$39,836	\$20,755	\$60,591	Necess ary- 2-5 Yrs	Deferred Maintena nce	Drainage is slow in some of the sink drains and when flushing toilets. This indicates that the sanitary waste system needs update and repairs.
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System		1	Ea.	\$1,164,004	\$606,446	\$1,770,450	Necess ary- 2-5 Yrs	Deferred Maintena nce	The terminal units are mostly original and are beyond useful life. Unit vents and window units have control problems according to the school engineer.
D3030	Cooling Generating Systems	System	Beyond Useful Life	Renew System		1	Ea.	\$207,060	\$107,879	\$314,939	Necess ary- 2-5 Yrs	Deferred Maintena nce	There are window units that are not code compliant and have major balancing problem. Most of the roof top units are beyond useful life and are leaking water in the school. There are some new roof top units in the new addition of 2001 and are in good conditions.

Prince George County Public Schools

13300 Old Marlboro Pike

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$471,905	\$245,863	\$717,768	Necess ary- 2-5 Yrs	Deferred Maintena nce	The heating distribution system, piping, ductwork, and fittings, appear to be in poor condition with some leaks and damage. There is no cooling distribution system in the original building. HVAC control system is not functioning properly. Some classrooms get too hot in winter and some get no heat. In the summer, some rooms are too cold or too hot. Specifically the computer lab overheats in winter and summer.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$43,338	\$22,579	\$65,917	Necess ary- 2-5 Yrs	Deferred Maintena nce

Facility Description:

William Beanes Elementary School is a one-story, 56,175 square foot facility located on a 12.2-acre site close to the Silver Hill Road Suitland Road in Suitland, MD. The original building was constructed in 1972 and an addition (Six Modulares) was constructed in 1994, and no major renovation has been performed. In 2008 some minor projects were performed that included replacement of roof top units and carpet with composite tiles, and in 2012 network infrastructure upgrades were performed. In 2012 there was also a POD conversion of 16,204 S.F. into classrooms.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. None of the restrooms are configured for accessibility, although handrails were installed in standard-sized toilet stalls. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on footings and foundation walls. The building does not have a basement, but does have a crawl space of CMU construction.

B. SHELL

The superstructure is load bearing masonry walls. Floor construction is cast-in-place concrete. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with fixed and operable single-pane thermo pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof that was replaced in 2008.

C. INTERIORS

Interior construction partition wall types typically include painted CMU and drywall. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving, and toilet partitions. There are no stairs in the building. The interior wall finishes are typically painted CMU and drywall. Interior paint was redone in 2003. Floor finishes in common areas are typically vinyl tile and carpet. Floor finishes in assignable spaces is typically vinyl tile and carpet. During the 2008 Assessment it was note in the A.H.E.R.A. Management Plan Report approximately 9,600 square feet of the vinyl tiles are asbestos containing materials in the school. Ceiling finishes in common and assignable areas are typically suspended acoustical panels.

D. SERVICES

Conveying

The building does not include conveying equipment.

Plumbing

Plumbing fixtures were updated in 2012. Domestic water distribution is copper. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas hot water heater.

HVAC

Heating is provided by roof top units. The large units are mostly original. Cooling is supplied by the above roof top packaged units. The heating/cooling distribution system is ductwork system direct air. Fresh air is supplied by infiltration. Restrooms have ceiling exhaust fans. Controls and instrumentation are digital and not centrally controlled by an energy management system.

Fire Protection

The building has 5% fire sprinkler system in some of the custodian closets. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original. Lighting and branch wiring is serving recessed, surface-mounted, and pendent-mounted fluorescent and incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible and strobe annunciators in common spaces and interior corridors. The system is activated by pull stations and is centrally monitored. The telephone and data systems are combined and included in dedicated closets or cabinets. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library and theater and stage equipment, audio-visual, laboratory, medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, floor grilles and mats, and multiple seating furnishings. Built-in shelving and storage units are located in the library, nursery's office, and classrooms.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where four out of 68 are handicap spaces with paths to building. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school does not have a fuel oil tank. The school uses natural gas.

Current Repair Cost: \$10,146,400.88**Replacement Cost:** \$14,645,073.48**FCI:** 69.28%

General Information:

Function:	Elementary School
Gross Area:	54,868 S.F.

Year Built:**Last Renovation:****Facility Description:**

Williams Paca Elementary School is a one-story 54,868 square foot facility located on a 10.9-acre site close to I-495 (Capital Beltway) in Landover, MD. The original building was constructed in 1963 and additions were constructed in 1964, 1969, and 2000, with no major renovations. In 2012 a kitchen grease trap was replaced.

ACCESSIBILITY ISSUES

The facility is not in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The study should include ramp access, door hardware, interior signage, restrooms, and drinking fountains.

A. SUBSTRUCTURE

The building typically is a slab-on-grade, concrete footings and foundation walls. The building does not have a basement. The construction is CMU and glaze block.

B. SHELL

The superstructure is reinforced concrete masonry with face brick, reinforced concrete masonry load bearing walls. Floor construction is slab on grade. Roof construction is steel bar joist, Tectum board, with ridged insulation and a built up roof system. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are aluminum sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is a low-slope with built-up roof that was replaced in 1995.

C. INTERIORS

Interior partition wall types typically include painted CMU, and glaze block. Interior doors are generally solid core wood doors with hollow metal. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving, handrails, toilet partitions. Stair construction includes concrete risers and treads with tile finishes. The interior wall finishes are typically painted CMU and glaze block. Floor finishes in common areas is typically ceramic tile, asbestos tile, carpet, and stage floor wood. Floor finishes in assignable spaces are typically asbestos tile, terrazzo, and carpet. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report the school contains 32,000 square feet of vinyl asbestos tiles and 2,750 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels, Tectum panels and exposed deck.

D. SERVICES**Conveying**

The building has one five-step wheel chair lift.

Plumbing

Fixtures are original. Sinks, faucets, urinals, toilets and other plumbing fixtures were not updated. Most of the water fountains are original. Domestic water distribution is copper. Sanitary waste system is cast iron. Drainage is slow in some of the bathrooms and sinks. Rain water system is internal with roof drains. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided two gas/oil fired Boilers. Cooling is supplied by mostly window units and few roof top packaged units on the new wing. The heating/cooling distribution system is ductwork, 2-pipe, radiators, and unit ventilators. Fresh air is supplied by infiltration. Ceiling exhaust fans are in restrooms. Controls and instrumentation are mostly pneumatic for the heating system and digital for the roof top units and not centrally controlled by an energy management system.

Fire Protection

The building does not have fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Facility Executive Summary

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Most of the switch gear is still original. Lighting and branch wiring is serving recessed, surface-mounted, and pendant-mounted fluorescent and incandescent. Emergency power is not present while emergency lighting is present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors. The system is activated by pull stations and heat sensors and is not centrally monitored. The telephone and data systems are combined and not included in dedicated closets or cabinets. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, health room equipment, food service equipment and a kitchen grease trap replaced in 2012. The building also includes fixed casework.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking spaces is available on-site where there are four handicap spaces out of the 95 with paths to building entrances. Drainage is generally handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The school has an 8,200 gallon fuel oil tank of dual wall construction replaced in 1995.

Current Repair Cost: \$8,616,473.60**Replacement Cost:** \$15,228,974.37**FCI:** 56.58%

Facility: \Elementary Schools\William Paca Elementary_Original Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	D4010	Sprinklers	System	Beyond Useful Life	Renew System	1	Ea.	\$5,546,702 \$183,126	\$2,889,831 \$95,409	\$8,436,533 \$278,535	Necess ary- 2-5 Yrs	Building Integrity	
	D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$81,189	\$42,299	\$123,488	Critical / Immediate Need	Capital Renewal	The main power switchgear and most of the electrical panels in hallways and classrooms are original and need update. Some panels have no capacity to expand at the time of need. The electric room is full of boxes, flammable materials, and other materials that could be a fire and safety hazard.
	D5020	Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$639,138	\$332,991	\$972,129	Necess ary- 2-5 Yrs	Capital Renewal	Most lighting is outdated and in some cases not operating. Many of the light covers are stained and broken. Some class rooms need ballasts and wiring.
	D5030	Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$126,745	\$66,034	\$192,779	Necess ary- 2-5 Yrs	Compliance	
	D5090	Other Electrical Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$3,157	\$1,645	\$4,802	Necess ary- 2-5 Yrs	Capital Renewal	Other electrical systems are mostly original and need update.
	G3060110	Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$3,157	\$1,645	\$4,802	Necess ary- 2-5 Yrs	Environmental	
	G3090	Propane	System	Beyond Useful Life	Renew System	1	Ea.	\$4,544	\$2,367	\$6,911	Necess ary- 2-5 Yrs	Environmental	
	C3010230	Paint	System	Beyond Useful Life	Renew System	1	Ea.	\$194,403	\$101,284	\$295,686	Necess ary- 2-5 Yrs	Capital Renewal	Paint finishes are worn, stained, smudged, and chipped, and need to be repainted.
	C3020410	VAT	System	Beyond Useful Life	Renew System	1	Ea.	\$491,704	\$256,178	\$747,881	Necess ary- 2-5 Yrs	Environmental	There is 9x9 VAT throughout the building with cracks and separation. The tile is beyond useful life and needs to be replaced.
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$78,030	\$40,654	\$118,684	Necess ary- 2-5 Yrs	Capital Renewal	The carpet is worn, torn, and should to be replaced.
	C3020410	Concrete finish flooring	System	Beyond Useful Life	Renew System	1	Ea.	\$2,706	\$1,410	\$4,116	Necess ary- 2-5 Yrs	Building Integrity	
	D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$303,106	\$157,918	\$461,024	Necess ary- 2-5 Yrs	Capital Renewal	Plumbing fixtures are mostly original and need update. Some of the fixtures are out of order and are covered with plastic to prevent students from using them. Some sinks are chipped, cracked, and have rust. Some faucets are slow and broken.

eCOMET Facility Report Facility Executive Summary

Report Date: 08 Sep 2012

D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$26,612	\$13,865	\$40,477	Necess ary- 2-5 Yrs	Environm ental	
D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$28,867	\$15,040	\$43,907	Necess ary- 2-5 Yrs	Building Integrity	
D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$40,595	\$21,150	\$61,744	Necess ary- 2-5 Yrs	Environm ental	The sanitary piping is beyond its useful life outdated and in some areas is clogged and others leaking.
D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$1,207,461	\$629,087	\$1,836,548	Necess ary- 2-5 Yrs	Capital Renewal	Most of the terminal units are original and show signs of damage. The school is in need of complete terminal units update. The school engineer stated the units control system is not operating at times and if operating the temperature is not adequate.
D3020	Heat Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$264,315	\$137,708	\$402,024	Necess ary- 2-5 Yrs	Capital Renewal	The heat generation system is original and is beyond useful life. The boilers are in poor condition. The school engineer indicated that these boilers are in constant break and repair.
D3030	Cooling Generating Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$215,151	\$112,094	\$327,244	Necess ary- 2-5 Yrs	Capital Renewal	Window units throughout the school are not code compliant and are outdated. Cooling in the school is poor according to the school engineer. Most of the rooms have control problem and the units are noisy. Roof top units are located on the new section and some have control issues.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$489,389	\$254,972	\$744,361	Necess ary- 2-5 Yrs	Capital Renewal	The distribution system consisting of pipes, pumps, ductwork, vents and units are mostly outdated and beyond useful life. Circulation pumps are leaking, pipe insulation is peeling out, and pipes are leaking, and so on. There are lots of leaks and stains through out of the school.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$44,654	\$23,265	\$67,919	Necess ary- 2-5 Yrs	Environm ental	The control system for each of the roof top units is located in one area and is not centralized. This limits the control for limited number of the rooms and keeping the others without of controls. Also, control for heating is outdated and mostly inoperable.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$36,084	\$18,800	\$54,884	Necess ary- 2-5 Yrs	Environm ental	
C3030210	Acoustical Ceilings	System	Beyond Useful Life	Renew System	1	Ea.	\$229,587	\$119,615	\$349,201	Necess ary- 2-5 Yrs	Capital Renewal	The ceiling is in poor condition due to stains, fading, and some warped tile. The tile is beyond useful life and should be relpaced.
C3030110	2x 4 Tectum	System	Beyond Useful Life	Renew System	1	Ea.	\$71,600	\$37,304	\$108,904	Necess ary- 2-5 Yrs	Capital Renewal	Tectum panels are stained and fading.

School Addition 2	Built in 1995, 9,290 S.F.
School Board District	5
School Grade	PreK-6th

General Information:

Function: Elementary School
Gross Area: 56,101 S.F.

Year Built:
Last Renovation:

Facility Description:

Woodmore Elementary School is a one-story, 56,101 square foot facility located on a 21-acre site close to MD Route 214 and US Route 50 in Mitchellville, MD. The original building was constructed in 1964 and additions were constructed in 1968 and 1995 (Eight Modulares), with no major renovation performed. In 2012 a kitchen grease trap was repalced.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and a ramp, but does not have push button wall switches / automatic door openers. All programs in this one-story facility are handicap accessible. Handicap toilet stalls are available only in the 1995-addition. Interior graphics and/or signage are inadequate or missing in some portions of the building and do not comply with ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

A portion of the building, including the cafeteria and multi-purpose room, rests on the concrete footings and foundation walls, and the remainder of the building typically rests on a slab-on-grade. The building does not have a basement, but does have a crawl space under the cafeteria.

B. SHELL

The superstructure is load bearing masonry walls. Roof construction is metal pan with lightweight fill. The exterior enclosure is brick veneer over CMU with Tecfab panels. Some exterior walls in the original building and 1968 addition have Tecfab fireproof wall panels. The exterior windows in the original building are aluminum sash with operable single-pane glazing. The exterior windows in the 1995 addition are aluminum sash with operable thermo pane glazing. Fire exit windows are available in all classrooms. Two classrooms in the 1995 addition and the classrooms in 1968 addition also have exterior doors. The exterior doors in the original building are hollow metal steel in corridors and solid core wood doors in the classrooms. The exterior doors in the 1995 addition are hollow metal steel. The roofing on the original building and 1968 addition is typically low-slope built-up roof with gravel ballast. The roofing on the 1995 addition is typically pitched built-up roof with gravel ballast.

C. INTERIORS

Interior partition walls divide types typically include painted CMU and a few folding metal partition walls in classrooms. The interior doors in the 1995 addition have 20 minute fire rating. Interior fittings include chalk/tack boards, toilet accessories, handrails, and toilet partitions. Most of the classrooms have original blackboards. Toilet accessories such as metal partitions in the original building and 1968 addition are original. There is concrete stairs to access the boiler room. There is an exterior concrete step to access the 1968 addition. There is a metal ladder to access the roof hatch.

Interior wall finishes are typically painted CMU. Floor finishes throughout the building are typically vinyl asbestos tiles (VAT), vinyl composition tiles (VCT), carpet, and ceramic tiles. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report the school contains 24,600 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended (concave, needlepoint, fissured, and metal pan) acoustical tiles.

D. SERVICES**Conveying**

The building does not have an elevator.

Plumbing

Fixtures are original, except for the low flow toilets, which were recently installed. Other plumbing fixtures in the original building and 1968 addition, such as urinals, and sinks are original to the building age. Domestic water distribution is original and consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is internal with roof drains. The building does not have a sprinkler system.

HVAC

Facility Executive Summary

Heating is provided by two new steam gas fired boilers that supply fin tube radiators and terminal units throughout the building. Cooling is provided individual window units for the classrooms and a roof package unit for offices. Distribution is a 2-pipe system to the fin tube radiators and fan coil units. Fresh air is supplied mostly by infiltration. Heating and cooling for the 1995 modular addition is provided by gas fired, roof mounted package units. Controls are low voltage electrical thermostats and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides service to the main disconnect. Minor additions have been made to accommodate the window air conditioning, but most of the distribution system is original. Lighting has been upgraded to electronic ballast and T-8 lamps. There are emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Communication and Security

The system consists of visual/audible annunciators, manual pull stations and heat/smoke detectors. Telephone and data systems are separate, not located in dedicated closets, and do not have independent cooling systems. The security system consists of motion sensors.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, medical equipment, food service equipment and a kitchen grease trap replaced in 2012. The library has shelves and furniture; such as tables/chairs. The nurse's room has two beds. The sinks, cabinets, and restroom fixtures in the nurse's room are original. The school has a stage with lights and curtains. The building also includes fixed casework/cabinetry in few classrooms, window treatment, and multiple seating furnishings (folding chairs and tables) in the multi-purpose room.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Asphalt surface parking is available on-site where there are two reserved handicap spaces out of total about 36 parking spaces. Drainage is inadequate and is handled by surface discharge. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic, especially on the back side of the building. Underground fuel tank was installed in 1993.

Current Repair Cost: \$9,204,169.98**Replacement Cost:** \$14,635,602.55**FCI:** 62.89%

Gross Area:	31,687 S.F.	Last Renovation:

Facility Description:

Woodridge Elementary School is a partial two-story, 31,687 square foot facility located on a 6.7 acre site close to US Route 50 and I-495 (Capital Beltway) in Hyattsville, MD. The original building was constructed in 1954 and additions were constructed in 1963, 1979, and 1994 (four modulars), with some renovation done in 1999. In 2012 an underground fuel tank was replaced.

ACCESSIBILITY ISSUES

The facility is generally not in compliance with ADA requirements. However, further study by an ADA Specialist is required to ensure compliance with Federal and State requirements. The main entrance appears to be handicap accessible. There is one unisex handicap toilet facility.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade and foundation walls that previously were showing signs of settlement or damage. The building has a partial basement of cast in place construction that previously was showing signs of settlement and water infiltration.

B. SHELL

The superstructure is concrete frame. Floor construction is slab on grade. Roof construction is slab. The exterior enclosure is comprised of walls of brick veneer over CMU. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof, replaced in 1998.

C. INTERIORS

Interior partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, shelving, handrails and toilet partitions. Stair construction includes steel / concrete risers and treads with rubber finishes. Interior wall finishes are typically painted CMU. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces are typically vinyl tile and some carpet. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building has a hydraulic elevator that addresses many ADA functions.

Plumbing

Fixtures are original. Domestic water distribution is a mixture of copper and galvanized steel. Sanitary waste system is a mixture of cast iron and plastic. Rain water system is internal and external with roof drains and scuppers. Domestic hot water is provided by a mixture of gas and electric hot water heaters.

HVAC

Heating is provided by fuel oil fired steam boilers. Cooling is supplied by rooftop package units and window units. The heating/cooling distribution system is a mix of ductwork and two-pipe system using fan coil units and unit ventilators. Fresh air is supplied by infiltration and air handlers. Ceiling and wall-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted and pendent-mounted fluorescent and incandescent. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible/strobe annunciators in common spaces, balconies, interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The system was upgraded. The telephone and data systems are combined and include dedicated closets or cabinets that are inadequately secured and cooled. The building does not include an internal security system.

Other Electrical Systems

The building has an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library (media center), medical equipment, food service equipment and a kitchen grease trap. The building also includes fixed casework, window treatment, and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where two are handicap spaces with paths to building entrances. Drainage is generally handled by surface discharge and area drains. The site includes concrete sidewalks immediately adjacent to the facility, site lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system. The underground fuel tank was replaced in 2012.

Facility: \Elementary Schools\Woodridge Elementary_Original Building (continued)

Deficiency Detail:

Facility Name	Assembly	System	Material	Distress	Correction	Qty	Unit	Raw Cost	Additional Cost	Total Cost	Priority	Def. Cat.	Note
Building Systems	B2020	Exterior Windows	System	Beyond Useful Life	Renew System	1	Ea.	\$3,497,166 \$85,737	\$1,822,024 \$44,669	\$5,319,190 \$130,406	Necess ary- 2-5 Yrs	Deferred Maintena nce	Exterior windows are steel sash with operable single-pane glazing and are in poor condition.
	B2030	Exterior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$55,037	\$28,675	\$83,712	Necess ary- 2-5 Yrs	Deferred Maintena nce	The hollow metal steel exterior doors are worn, outdated, and in poor condition.
	C1020	Interior Doors	System	Beyond Useful Life	Renew System	1	Ea.	\$55,591	\$28,963	\$84,553	Necess ary- 2-5 Yrs	Deferred Maintena nce	The solid core wood doors are in poor condition and beyond useful life.
	C1030	Fittings	System	Beyond Useful Life	Renew System	1	Ea.	\$81,035	\$42,219	\$123,254	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3010230	Tile	System	Beyond Useful Life	Renew System	1	Ea.	\$277,676	\$144,669	\$422,346	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3020410	VCT	System	Beyond Useful Life	Renew System	1	Ea.	\$125,983	\$65,637	\$191,621	Necess ary- 2-5 Yrs	Deferred Maintena nce	VCT in common areas and assignable spaces is in poor condition.
	C3020410	Carpet	System	Beyond Useful Life	Renew System	1	Ea.	\$25,200	\$13,129	\$38,329	Necess ary- 2-5 Yrs	Deferred Maintena nce	The carpet has reached the end of its useful life.
	C3020410	Ceramic Tile	System	Beyond Useful Life	Renew System	1	Ea.	\$17,273	\$8,999	\$26,272	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	C3030	Ceiling Finishes	System	Beyond Useful Life	Renew System	1	Ea.	\$171,750	\$89,482	\$261,232	Necess ary- 2-5 Yrs	Deferred Maintena nce	The 2x2 and 2x4 suspended acoustical panels are in fair condition, but beyond useful life.
	D2010	Plumbing Fixtures	System	Beyond Useful Life	Renew System	1	Ea.	\$225,958	\$117,724	\$343,682	Necess ary- 2-5 Yrs	Deferred Maintena nce	Water fountains, sinks, faucets, and some toilets and urinals are still original and need to be updated. Water fountain valves are inadequate. Faucets are hard to operate. If the third sink in the photo was intended for handicap use, then drain insulation is needed.
	D2020	Domestic Water Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$16,041	\$8,357	\$24,398	Necess ary- 2-5 Yrs	Deferred Maintena nce	Although the hot water heater was recently updated, the distribution system was not and in need of update. Some of the faucets had low pressure that could indicate line blockage.
	D2040	Rain Water Drainage	System	Beyond Useful Life	Renew System	1	Ea.	\$17,424	\$9,078	\$26,502	Necess ary- 2-5 Yrs	Deferred Maintena nce	
	D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$24,891	\$12,968	\$37,860	Necess ary- 2-5 Yrs	Deferred Maintena nce	

Prince George County Public Schools

13300 Old Marlboro Pike
Upper Marlboro, MD 20772

eCOMET Facility Report

Report Date: 08 Sep 2012

Facility Executive Summary

D3050	Terminal & Package Units	System	Beyond Useful Life	Renew System	1	Ea.	\$730,698	\$380,694	\$1,111,392	Necess ary- 2-5 Yrs	Deferred Maintena nce	Most of the roof top units are beyond useful life and are leaking water in the school. The new additions and main office have mostly new roof top units and are in good conditions, except for the balance and control problem. There are window units that at not code compliant.
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$27,104	\$14,121	\$41,225	Necess ary- 2-5 Yrs	Deferred Maintena nce	HVAC control system is not functioning properly. Some class rooms get too hot in winter and some get no heat. In the summer, some rooms are too cold or too hot.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$21,572	\$11,239	\$32,812	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$49,229	\$25,649	\$74,878	Necess ary- 2-5 Yrs	Deferred Maintena nce	The main power switchgear and most of the electrical panels in hallways and classrooms are original and need update. Some panels have no capacity to expand at the time of need.
D5020	Lighting and Branch Wiring	System	Beyond Useful Life	Renew System	1	Ea.	\$386,921	\$201,586	\$588,507	Necess ary- 2-5 Yrs	Deferred Maintena nce	Lighting in the multipurpose room is inadequate and needs update. Lighting in other areas was replaced but not completely.
D5030	Communications and Security	System	Beyond Useful Life	Renew System	1	Ea.	\$69,143	\$36,023	\$105,166	Necess ary- 2-5 Yrs	Deferred Maintena nce	The security system is out dated and does not meet the principle and school needs. Internal and external surveillance is needed. There are no cameras or cartelized monitoring system for security.
D5090	Other Electrical Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$2,489	\$1,297	\$3,786	Necess ary- 2-5 Yrs	Deferred Maintena nce	
E1020	Institutional Equipment	System	Beyond Useful Life	Renew System	1	Ea.	\$53,655	\$27,954	\$81,609	Necess ary- 2-5 Yrs	Deferred Maintena nce	
G2020	Parking Lots	System	Beyond Useful Life	Renew System	1	Ea.	\$67,129	\$34,974	\$102,103	Necess ary- 2-5 Yrs	Deferred Maintena nce	The asphalt parking is in poor condition with cracks.
G2030	Pedestrian Paving	System	Beyond Useful Life	Renew System	1	Ea.	\$23,647	\$12,320	\$35,968	Necess ary- 2-5 Yrs	Deferred Maintena nce	The concrete sidewalks are in poor condition.
E1090350	Food Service Equipment, EACH	System	Beyond Useful Life	Renew System	1	Ea.	\$154,107	\$80,290	\$234,396	Necess ary- 2-5 Yrs	Deferred Maintena nce	Food service equipment is reportedly in fair condition. However, due to its general age, food service equipment should be scheduled for replacement.
G3060110	Gas Service Piping	System	Beyond Useful Life	Renew System	1	Ea.	\$1,936	\$1,009	\$2,945	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$296,483	\$154,468	\$450,951	Necess ary- 2-5 Yrs	Deferred Maintena nce

General Information:

Function:	Elementary School	Year Built:
Gross Area:	47,855 S.F.	Last Renovation:

Facility Description:

Yorktown Elementary School is a one-story, 47,855 square foot facility located on a 10.2 acre site close to MD Route 197 and MD Route 564 in Bowie, MD. The original building was constructed in 1967 and no additions were constructed or major renovations performed since that time, with exception of FY03 SR Roof Replacement, which was performed in 2004. In 2012 some minor projects were performed that included security upgrades.

ACCESSIBILITY ISSUES

Access to this school is facilitated by designated handicap parking spaces and curb cuts that are close to the covered sidewalk that leads to the main entrance. All programs within this one-story facility are accessible to the handicapped; however, additional enhancements are required to gain full compliance with the current ADA legislation. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or sub-floor.

B. SHELL

The superstructure is steel frame with masonry construction. Floor construction is slab on grade. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer with metal siding. Exterior windows are aluminum sash with fixed and operable single-pane glazing. Exterior doors are hollow metal steel.

C. INTERIORS

Interior construction partition wall types typically include painted CMU. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, toilet accessories, shelving and toilet partitions. The interior wall finishes are typically painted CMU and tile. Floor finishes in common areas is typically vinyl composition tile and carpet. Floor finishes in assignable spaces is typically vinyl tile. During the 2008 Assessment it was noted in the A.H.E.R.A. Management Plan Report the school contains 17,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas and assignable areas are typically suspended acoustical panels.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

Domestic water distribution is copper and galvanized steel. Sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by a gas-fired hot water heater with separate storage and circulator.

HVAC

Heating is provided by boilers, which were installed in 2007. Cooling is supplied by individual room window units. The heating distribution system is a steam/condensate 2-pipe system using air handlers, fan coil units, radiators, and unit ventilators. Fresh air is supplied by infiltration and air handling units. Roof-mounted exhaust fans are installed in restrooms and ventilation. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution (from branch panels) wiring is typically copper. Lighting and branch wiring is typically grounded serving recessed, surface-mounted and pendent-mounted fluorescent and some incandescent. Emergency power and lighting (battery) are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

Facility Executive Summary

The fire alarm system consists of audible annunciators in common spaces, interior corridors, etc. The system is activated by pull stations and/or smoke detectors and is not centrally monitored. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems:

The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater and stage, audio-visual, medical equipment, food service equipment, a kitchen grease trap, exhaust hood, fixed casework and window treatment furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on-site where two out of 47 are handicap spaces with paths to building entrances. Drainage is generally handled by surface area drains. The school has an 8,000 gallon fuel oil tank.

Current Repair Cost: \$7,894,281.25**Replacement Cost:** \$12,967,788.21**FCI:** 60.88%

General Information:

Function:	Academy	Year Built:
Gross Area:	151,163 S.F.	Last Renovation:

Facility Description:

Andrew Jackson Academy is a two-story, 153,163 square foot facility located on a 15.4-acre site close to I-495 (Capital Beltway) in Forestville, MD. The original building was constructed in 1971, with no additions constructed or major renovations performed since that time, with exception of TIMS in 1999, Steam Boiler Replacement in 2001, and Roof Replacement in 2004.

ACCESSIBILITY ISSUES

The main entrance has curb cuts and doors wide enough for wheel chair access, but lacks push button wall switches and automatic door openers. The school does not have an elevator or ramp to the second floor. Handicap stalls are available in the gang restrooms on the first floor. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on a slab-on-grade. The building does not have a basement and crawl space. The facility has a penthouse that contains mechanical equipment.

B. SHELL

The superstructure is load bearing masonry walls with slab-on-grade floor and open web steel joist roof framing. The exterior enclosure is comprised of brick veneer over concrete masonry unit (CMU), single pane metal windows with operable frames, and hollow metal steel doors. The metal windows throughout the building are original. The exterior doors throughout the building are original and they were repaired in 2007. The original building has low-slope built up roof with gravel ballast, which was replaced in 2004.

C. INTERIORS

Interior partition walls typically include painted concrete masonry units with glazed wainscot in the corridors, gypsum drywall in technical education room, and folding metal partitions in gymnasium. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, toilet accessories, handrails, and toilet partitions. The classrooms have original chalkboards. Metal toilet partitions are original rusted and stained. There are concrete stairs which provide access to the second floor. There are steel stairs in the boiler room to access the penthouse. There is a metal ladder to access the roof through the roof hatch.

Interior wall finishes are typically painted CMU, gypsum drywalls, and folding metal partitions. Floor finishes throughout the building are typically terrazzo, vinyl composition tiles (VCT), carpet, and ceramic tiles. There is terrazzo floor finish in the corridors. There is VCT floor finish in the classrooms. There is carpet in the library and main office. There are ceramic tiles in the restrooms and kitchen. Ceiling finishes are typically suspended acoustical tiles.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

The plumbing fixtures are mostly original but some sinks, faucets, and other plumbing fixtures were updated in 2007. Domestic water distribution is primarily copper piping and the sanitary waste system is cast iron. Rain water system is internal and external with roof drains and scuppers. Domestic hot water is provided by gas hot water heater.

HVAC

Heating is provided by two oil/gas-fired boilers, which were installed in 2001. Cooling is supplied by a water-cooled chiller. The heating/cooling distribution system is typically ductwork and unit ventilators. Fresh air is supplied by air handlers. Ceiling-mounted exhaust fans are installed in restrooms and kitchen. Controls and instrumentation are pneumatic and are not centrally controlled by an energy management system.

Fire Protection

The building has a fire sprinkler system. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Facility Executive Summary

Electrical

The electrical service is fed from a pole mounted with four transformers that delivers power to a main panel. Power distribution wiring is typically copper. Several switch gears are original and need to be update. Lighting and branch wiring is serving recessed, surface mounted, and pendent-mounted fluorescent. Illumination is generally adequate. Emergency power and lighting is provided. Exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of a main panel in the boiler room and audible annunciators in common spaces and interior corridors, which does not comply with ADA requirements because it is not in all areas. The system is activated by pull stations and aural bell/horn alarm detection devices and no visual alarms. Smoke detectors are inadequate. The telephone and data systems are combined and are included in dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by contact devices and is centrally monitored.

Other Electrical Systems: The building has dedicated grounding for lighting protection and an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater, stage and medical equipment. The building also includes fixed casework, window treatment, food service equipment and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where three out of 130 are handicap spaces with strip paths to building entrance. Drainage is handled by surface discharge and area drains. The site includes concrete sidewalks, lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system.

Current Repair Cost: \$14,429,921.62**Replacement Cost:** \$35,407,394.91**FCI:** 40.75%

General Information:

Function:	Academy
Gross Area:	110,597 S.F.

Year Built:
Last Renovation:

Facility Description:

Beltsville Academy is a two-story, 110,597 square foot facility located on a 19.9-acre site close to I-95 in Beltsville, MD. The original building was constructed in 1961 and an addition was constructed in 1964, with no major renovation, with exception of FY91 Roof Replacement, FY02 TIMS Wiring, and FY02 Boiler/Tank Replacement. The school has two temporary buildings on the site.

ACCESSIBILITY ISSUES

The main entrance to the facility has curb cuts, ramp in the main lobby, and wide enough doors for wheel chair access, but lacks push button wall switches and automatic door openers. The exterior doors have panic hardware. Handicap toilet stalls are available in two single restrooms, but are missing in the gang restrooms. The facility is two stories, but has no elevator, chair lift, or any other means of conveyance to the second floor.

A. SUBSTRUCTURE

The building typically rests on the slab-on-grade and concrete footing and foundation walls. The building does not have a basement, but does have a crawl space.

B. SHELL

The superstructure is load bearing masonry walls. Roof construction is metal pan with lightweight fill and is resting on open web steel joist roof framing. The exterior enclosure is brick veneer over CMU. The exterior windows are typically aluminum sash with operable single-pane glazing. Fire exit windows are available in many classrooms. The exterior doors are hollow metal steel doors. The facility has low-slope, built up roof with gravel ballast. The built-up roof was replaced in 1991 and was patched in 2001 immediately after tornado damage.

C. INTERIORS

Interior partition walls typically include painted CMU with glazed block wainscot in the corridors and drywall in four classrooms. Interior doors, including fire doors with no fire ratings, are generally solid core wood doors supported by metal frames. Interior fittings in the building include old chalk/tack boards, lockers, toilet accessories, handrails, and toilet partitions. The classrooms have original black-boards. There are steel framed stairs, with concrete treads and metal risers with ceramic tile finish. There is a metal ladder to access the roof through the roof hatch.

Interior wall finishes are typically painted CMU and drywall. The floor finishes throughout the building are typically vinyl asbestos tiles (VAT), vinyl tiles, terrazzo, carpet, and ceramic tiles. There are VAT floor finishes in the classrooms on both the first and second floors. There are vinyl floor tiles in the classrooms and corridor. There is terrazzo floor finish in the first floor corridor. There is carpet in the classrooms, teachers lounge, and offices. There are ceramic tiles in the restrooms and kitchen. During the 2008 assessment it was noted in the A.H.E.R.A. Management Plan that the school contains 42,100 square feet of vinyl asbestos tiles. The overall ceiling finishes are typically suspended ceiling tiles.

D. SERVICES**Conveying**

The building does not include conveying equipment; no elevators, chair lifts, or any other conveyance equipment to access the second floor.

Plumbing

The plumbing fixtures are original; however, the toilets and flush valves were replaced in 2007. There are two handicap accessible unisex facilities. Domestic water distribution is copper piping and the sanitary waste system is cast iron. Rain water system is internal and external with roof drain, scuppers, and downspouts. Domestic hot water is provided by a gas water heater, which was installed 2003.

HVAC

Facility Executive Summary

Heating is provided by two oil-fired steam boilers, which were replaced 2002. Cooling is supplied by window units. The heating distribution system is a 2-pipe system using air handlers, fin tube radiators, and unit ventilators. There are two DX cooling units in the cafeteria installed in 2007. Fresh air is supplied by infiltration and air handling units. Roof-mounted exhaust fans are installed in restrooms. Controls and instrumentation are pneumatic and not centrally controlled by an energy management system.

Fire Protection

The building does not have a fire sprinkler system. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. Lighting and branch wiring is typically serving recessed, surface-mounted and pendent-mounted fluorescent and some incandescent fixtures. Illumination is generally adequate. Battery powered emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system consists of audible annunciators in common spaces and interior corridors. The system is activated by pull stations and/or smoke detectors and is centrally monitored. The system needs to be upgraded to comply with current code requirements. The telephone and data systems are separate and do not include dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by combination devices and is centrally monitored.

Other Electrical Systems: The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater, stage and medical equipment. The building also includes fixed casework, window treatment, food service equipment and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site; additional parking was added in 2012 to provide a total of 111 spaces including 6 handicap spaces with strip paths to the building entrance. Drainage is handled by surface discharge and area drains. The site includes concrete sidewalks, lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system. The facility has a fuel storage tank that was installed in 1991.

Current Repair Cost: \$18,149,379.21**Replacement Cost:** \$27,095,404.65**FCI:** 66.98%

Year Built:
Last Renovation:

Facility Description:

Benjamin Foulois Creative and Performing Arts School is a two-story, 114,715 square foot facility located on a 16.2-acre site close to the Interstate 495 (Capital Beltway) in Morningside, MD. The original building was constructed in 1968 and has had no additions constructed or major renovations performed since that time, with the exception of FY05 POD Code Fire Alarm work.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. There are no elevators or stair lifts to access the second floor and none of the restrooms are configured for accessibility. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement or crawl space.

B. SHELL

The superstructure is steel frame and load bearing masonry walls and open web steel joist roof framing. Floor construction is metal pan with lightweight fill. Roof construction is gypsum form board. The exterior enclosure is comprised of walls of brick veneer over CMU, with some pre-cast tilt-up concrete panels. Exterior windows are aluminum sash with operable single-pane glazing; they do lock or operate properly. Exterior doors are hollow metal steel. Roofing is typically low-slope with built-up roof. Entrances do not comply with ADA requirements.

C. INTERIORS

Interior partition wall types typically include painted CMU, glazed block wainscot in the corridors, and drywall. Interior doors are generally solid core wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, and shelving. Toilet partitions are rusted and broken. Stair construction includes steel risers and treads with tile finishes. Interior wall finishes are typically painted CMU and drywall and ceramic tile. Floor finishes in common areas is typically terrazzo on the first floor and vinyl asbestos tiles on the second floor. Floor finishes in assignable spaces are typically vinyl asbestos tiles and carpet. The floor finish in the boiler room and electrical room is painted concrete. The floor finish in the gymnasium is wood. During the 2008 assessment, it was noted in the A.H.E.R.A. Management Plan that the school contains 72,000 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically suspended acoustical panels and plaster.

D. SERVICES**Conveying**

The building does not include conveying equipment.

Plumbing

The plumbing fixtures are mostly original; however, urinals and toilets were updated in 2007. Domestic water distribution is a mixture of copper and galvanized piping and the sanitary waste system is cast iron. Rain water system is internal with roof drains. Domestic hot water is provided by an original gas water heater.

HVAC

Heating is provided by two gas/oil fired which were installed in 2001. Cooling is supplied by a water cold chiller, four window units, and roof top units. The chiller is located outside of the building and was installed in 2001. The heating/cooling distribution system is ductwork and a 2-pipe system using air handlers, radiators, and unit ventilators. Fresh air is supplied by infiltration and air handling units. Ceiling exhaust fans are installed in the restrooms. Controls and instrumentation are pneumatic not centrally controlled by an energy management system.

Fire Protection

The building is partially sprinkled. Standpipes are not included within fire stairs. Fire extinguishers and cabinets are distributed near fire exits and corridors.

Electrical

Facility Executive Summary

The electrical service is fed from a pad mounted transformer that delivers power to a main panel. Power distribution wiring is typically copper. The switch gear is original and need update. Lighting and branch wiring is serving recessed, surface-mounted, pendent-mounted fluorescent and incandescent fixtures. Illumination was updated in 2007. Emergency power and lighting are present and exit signs are present at exit doors and near stairways and are typically illuminated.

Communications and Security

The fire alarm system was replaced in 2008. The telephone and data systems are combined and not included in dedicated closets or cabinets that are adequately secured and cooled. The building includes an internal security system that is actuated by optical and contact devices and is centrally monitored.

Other Electrical Systems: The building does not have an emergency generator.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater, stage and medical equipment. The building also includes fixed casework, window treatment, food service equipment and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site where two out of 90 are handicap spaces with strip paths to building entrance. Drainage is handled by surface discharge and area drains. The site includes concrete sidewalks, lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system. The school has a fuel oil storage tank that was installed in 1993.

eCOMET Facility Report

Report Date: 10 Sep 2012

Facility Executive Summary

D2030	Sanitary Waste	System	Beyond Useful Life	Renew System	1	Ea.	\$105,538	\$54,985	\$160,523	Necess ary- 2-5 Yrs	Deferred Maintena nce	Although most of the plumbing fixtures were updated in 2007, some sinks, toilets, and sanitary waste piping are original and need update.
D3040	Distribution Systems	System	Beyond Useful Life	Renew System	1	Ea.	\$1,263,012	\$658,029	\$1,921,041	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D3060	Controls & Instrumentation	System	Beyond Useful Life	Renew System	1	Ea.	\$307,436	\$160,174	\$467,610	Necess ary- 2-5 Yrs	Deferred Maintena nce	HVAC control system is original and has functional problems. The cafeterias gets too humid and windows fog. Some classrooms get too hot in winter and some get no heat. In the summer, some rooms are too cold or too hot. Since most of the HVAC system is original, some system balance and testing is needed. Ventilation balance is poor in restrooms, some classrooms, and in some hallways.
D3070	Systems Testing & Balancing	System	Beyond Useful Life	Renew System	1	Ea.	\$91,772	\$47,813	\$139,585	Necess ary- 2-5 Yrs	Deferred Maintena nce	
D5010	Electrical Service/Distribution	System	Beyond Useful Life	Renew System	1	Ea.	\$208,781	\$108,775	\$317,556	Necess ary- 2-5 Yrs	Deferred Maintena nce	The main power switchgear and most of the electrical panels in hallways and classrooms are original and need update. Some panels have no capacity to expand at the time of need.
C3020410	Wood	System	Beyond Useful Life	Renew System	1	Ea.	\$89,118	\$46,431	\$135,549	Necess ary- 2-5 Yrs	Deferred Maintena nce	
E1090350	Food Service Equipment EACH	System	Beyond Useful Life	Renew System	1	Ea.	\$157,975	\$82,305	\$240,279	Necess ary- 2-5 Yrs	Deferred Maintena nce	ADA / Accessibility

Facility Executive Summary

Facility: \Academies\Thomas G. Pullen School

Address: 700 Brightseat Road, Landover, MD 20786

Attributes:

School Area	1
Congressional	4
County Council	5
Historical Building	No
Legislative	24
Original Building	Built in 1967, 102,646 S.F.
School Addition 1	Built in 1991, 7,776 S.F.
School Board District	6
School Grade	PreK-8th

General Information:

Function:	Academy
Gross Area:	110,422 S.F.

Year Built:
Last Renovation:

Facility Description:

Thomas G. Pullen School is a two-story, 110,422 square foot facility located on a 20-acre site close to the Central Avenue Freeway in Landover, MD. The original building was constructed in 1967 and one addition was constructed in 1991 (eight modulars) with no major renovations, with the exception of FY03 ASP Boiler Replacement in 2004.

ACCESSIBILITY ISSUES

The facility is not generally in compliance with ADA requirements. Further study by an ADA Specialist is required to ensure compliance with Federal and State requirements.

A. SUBSTRUCTURE

The building typically rests on slab-on-grade. The building does not have a basement, cellar or a sub-floor but does have a crawl space.

B. SHELL

The superstructure is steel frame. Floor construction is slab on grade on the first floor and metal pan with lightweight fill on the second floor. Roof construction is metal pan with lightweight fill. The exterior enclosure is comprised of walls of brick veneer over CMU and pre-cast architectural panels over CMU. The 1991 modular class room addition has standing seam metal panels over drywall. Exterior windows are steel sash with operable single-pane glazing. Exterior doors are hollow metal steel in poor condition. Roofing is typically low-slope with built-up roof.

C. INTERIORS

Interior construction partition wall types typically include painted CMU. Interior doors are generally solid core and hollow wood doors with hollow metal frames. Interior fittings include chalk and tack boards, graphics, lockers, toilet accessories, shelving and toilet partitions. Stair construction includes concrete risers and treads with steel and tile finishes. The interior wall finishes are typically tiles. Floor finishes in common areas is typically terrazzo, ceramic tile, VAT resilient tile, vinyl composition tile and carpet. Floor finishes in assignable spaces is typically vinyl tile, wood and VAT resilient tile. During the 2008 assessment, it was noted in the A.H.E.R.A. Management Plan that the school contains 19,500 square feet of vinyl asbestos tiles. Ceiling finishes in common areas are typically suspended acoustical panels. Ceiling finishes in assignable areas are typically plaster suspended acoustical panels and exposed deck.

D. SERVICES

Conveying

The building does not have an elevator.

Plumbing

Domestic water distribution consists of copper and galvanized piping. Domestic hot water is provided by a gas fired water heater. Sanitary waste system is cast iron. Rain water drain system is primarily external with gutters, scuppers and downspouts. The building does not have a sprinkler system except for single heads in janitor closets.

HVAC

Heating is provided by two dual fired steam boilers that supply fin tube radiators and terminal units throughout the building. The boilers were installed in 2003. Cooling is provided by individual window units for each classroom and a roof mounted split system for the multipurpose room air handler. Fresh air is supplied by fan coil units during heating season and mostly infiltration during cooling season. Controls are low voltage electrical thermostats, individual controls on window units and pneumatic. The system is not centrally monitored or controlled.

Electrical

A pad mounted transformer provides power to a main disconnect. Minor circuit additions have been installed to address the window air conditioner power. Lighting has been upgraded to electronic ballasts and T-8 luminaries but fixtures and lens are but old and discolored. There are battery pack emergency lights in the corridors and exit signs are properly placed and illuminated. The building does not have an emergency generator.

Facility Executive Summary

Communication and Security

The system consists of audible annunciators, manual pull stations and heat/smoke detectors. The system is inadequate, obsolete, does not comply with ADA or life safety requirements and should be replaced. Kitchen range hood lacks a fire suppression system. Telephone and data systems are separate, not located in dedicated closets and do not have independent cooling systems. The security system consists of motion sensors, CCTV cameras and is adequate.

E. EQUIPMENT & FURNISHINGS

The building includes fixed library, theater, stage and medical equipment. The building also includes fixed casework, window treatment, food service equipment and multiple seating furnishings.

F. SPECIAL CONSTRUCTION

The building does not include special construction.

G. SITE

Surface parking is available on site. Additional parking was added in 2012 (67 spaces including 6 handicap) for a total of 201 parking spaces. Drainage is handled by surface discharge and area drains. The site includes concrete sidewalks, lighting for vehicular and pedestrian night traffic. The water supply is provided from the municipal distribution system. The school has a fuel oil storage tank that was installed in 1994.

Current Repair Cost: \$18,184,502.51**Replacement Cost:** \$29,127,687.24**FCI:** 62.43%
